The early units transitioned on a voltage plateau. Where NiCd will start to drop in voltage after full charge, NiMH tends to stop rising in voltage but not fall.

A NiCd charger will charge a NiMH until the voltage drops, which (if it happens at all) will be long after the battery is badly overcharged.

Dear Jim,

The ILG database is also superb. Formerly it took over a month for the current schedule to be posted but this time they've outdone themselves: the A06 schedule is already posted. I recommend that you and everyone else get their password and download it.

Also keep checking WRTH's site. I'm sure they will have the complete A06 schedule available for downloading very soon.

Best,

Joe

Alien Nuke Test

"The explosion scheduled for June 2 at the Nevada Test Site is part of an
effort to design a weapon that can penetrate solid rock formations in which
a country might store nuclear weapons or other weapons of mass destruction .
. . the test will be conducted about 90 miles northwest of Las Vegas, near
the center of the former nuclear testing site."
http://apnews.myway.com/article/20060331/D8GMGPLG8.html

Area 51!

Since there is no possible way that a 700 ton conventional explosive device
could be delivered to any foreign target, it seems that this is obviously
being tested to simulate a small tactical nuke.

____
Timelines

- Trinity -

May 7, 1945: This test detonated 108 tons of TNT.
July 16, 1945: First nuclear explosion in history.
August 6, 1945: Hiroshima, Japan

- Divine Strake -

June 2, 2006: This test will detonate 700 tons of explosives.
2006-2007: Multiple targets in Iran.

No, the stations are run locally. they play thier own locally researched
music lists, their own commercials done by thier own local traffic director,
and are usually live in most dayparts, using voice tracking to do
non-critical dayparts, like overnghts and weekends. One shift may be done by
a fulltimer in one bigger market, and another by someoen in a totally
different market. There is no central place wehre formats are assembled
(except for satellite delivered formats, which run in very small markets
mostly)

The local station is significantly staffed in every case, with a manager,
engineering, sales management, traffic, jocks for most shifts accounting,
promotion and street team, office staff, lots of sellers, etc. Al most all
commercial production in smaller markets is done locally (in LA, for 4
formats, we have 150 employees... in McAllen, for 2 fomrats, we have over
40.
>
> Here's a story on their recent move to a newer

>
> http://www.enquirer.com/editions/2004/06/02/biz_biz1aclear.html

With 40 studios, one would assume they have lots of live and local shows,
and lots of local production and imaging to do. This article dis-prooves
your point. Because Cincy is a large market, they can have each of thier
talents do voice tracking for another station or two, and send them out of

that facility. Howeve, to do 4 stations in LA, we have 18 studios and
production bays, and are building more. we do not do any voice tracking at
all.

More stations were voice traced in the 70's than today, as a percentage of
total stations... we just called it by a different name then.

So, what is the difference. If two companies combien, and are over the
limits, they have to sell the excess. That is normal.

So? That is competition. Normal. I did the same sort of thing in the 60's
when I would pick up an extra station and use it as a competive tool to
protect my other stations. There is nothing new about this. It is like Time
Magazien seeing there was a market for gossip news and not wanting anyone
else to take the major share, thus launching People.

> when heads roll and some few people are
> allowed to keep their job if they join the
> new company.

I have been through 3 mergers at one company over the last 12 years. There were ZERO firings at the closing. In fact, in each case, the stated reason for the merger was to gain access to our people, talent and experience... and revenue generating abilities The ones that occasionally get fired are the top, top management which is sometimes duplicated. But that is not that common either.

In a merger, the old company IS hte new company. The two unite; that is what "merger" means. Generally, there are no extra people. If both companies had stations in the same market, only duplicated positions are sometimes eliminated, but usually the work load can not be reduced.

> Otherwise, the new owners
> might decide to "go in a different direction"
> and can the lot of them. Having survived
> several Black Mondays myself, you're just
> relieved to have a job.

I have never seen a merger or major acquisition in radio where there was a wholesale dismissal of people on closing. In fact, most of what is paid for a radio staiton is for the intellectual property and billing, and only about 5% is for plant and facilities. Only when a very bad station is bought to totally reformat it would there be a house cleaning, but to have it happen at multiple staitons is nearly unheard of. These turnarounds are exceptions, where the buyer is only interested in the frequency, not the billing. An example would be HBC's LMA/purchase of KSCA in LA, in 1997. The AAA format could barely get a 1 share, and the station had been a losing dog for decades. It was sold, and went Spanish. All the air staff was let go, as well as promotions and copy and such, but that was because the station was doing so badly. In most cases, staitons are bought for thier ongoing value.

That's not the only instance in which that behavior was used to crush
a competing station. I still resent how WWWM, Cleveland was taken off
the air -- it was the #2 station in its format, and was known for
their careful attention to a clean signal. It was also the favorite
among my circles of friends -- WMMS was simply hot air and distortion.

No question. But that was not the point. The point is that Radio is responding the the age old complaint about commercial load. Radio does this frequently, btw. Then returns to maximizing profits through load as soon as the heat is off again.

They don't want to stop
> attracting users who want the commercial-free broadcasts until
> critical mass, but as soon as they believe they'll retain a
> sizeable enough subscribership while advertising they'll start
> commercials.

Mel Karmazin, current head of Sirius, said in a meeting at CBS when I was there, that if a station isn't running at least 16 units an hour, that they're wasting their time. This in the face of recent (at the time) research presented the Radio division that said that listener fatigue began to produce drop off after 12 units.

Karmazin's position was then that there is a tipping point of ratings lost versus revenue gained. And that it makes better business sense to push the unit count to THAT point, than lose potential revenue by running minimum effective spot load.

There is no reason to suggest that this thinking will affect decisions at Satellite, as well.

> People laughed at me when The Stain first started on television,

>

There's more than that. Karmazin also announced, virtually jointly with other companies, as NBC and Time Warner made the same announcement vitually simultaneously, that as HD TV catches on, that full bandwidth HD TV will disappear, and bandwidth will be stolen from the HD stream to create secondary, and subscription based, programming on the same channel. That his goal was to use the digital buzzword, but not actually broadcast much more resolution that NTSC does now, to carry his broadcasts. That much resolution was unnecessary, and that most viewers can't tell the difference between full HD and ED Tv anyway. That the future of all media are in multiple revenue streams from each property.

Radio will do the same.

On March 1 of this year?

Really? How times have changed -- it seems like just a month ago.

That's "scewed," properly spelled "skewed." I misspelled it because I
use an open-source software package called SCEW. What's your excuse?

No, you bring numbers, not listeners. They aren't the same thing.
The WSJ can see the difference.

Sorry, poor choice of words on my part caused by typing faster than I
think. You are, of course, correct.

But their wants or needs aren't necessarily what is good for radio in
the long term. They are interested in making money today, this hour,
this minute. If that kills off the goose that laid the golden egg,
well, that's the price of doing business.

You may be surprised. Radio, on the business side, hasn't really
changed much in it's focus since the 30's. It's only gotten more sharply
defined, and, in many cases, more aggressive.

Advertisers are advertisers. They'll continue to call the same shots,
until it can be shown that they can make more money than they're making
now by doing something different.

Many of the same names, and same faces will be involved.

Most, in fact. Just wearing different titles.

Not unless the lot of them have a
> collective earth-shattering epiphany, and my money is against it.

I'll write that down.

>
> No, he'll have lined his pockets well by trashing radio and won't need

David didn't create the tool...he only shows them how to use it. The
tool was created by Advertisers. Place your anger there.

I'd say you pretty much have that correct. The purpose of David and
his like and his kind, are to show the goose how to survive, if not
thrive, while laying golden eggs at the highest possible rate.

...because life as a DJ/"on air talent" had become miserable, right?

Your new career is very very closely related to the old one.
Voice-over talent for ads, club remotes, etc., all involve the same
skills you used in your old career: audio mixing, proper mic
technique, "The Voice," and so on. You simply aren't doing it
directly for broadcasting -- you tape a spot, or do your show to a
live audience instead.

It's not like you became an actuary and had to acquire an entirely new
set of skills.

Changing station is not changing career.

Idiiot.

Radio people who are on air, in production and in promotions are vey prone
to changing stations The jokes about U-Hauls are legion among us. I have
lived and worked in 4 countries and 8 states. I have worked for over 200
stations. But the moving is less these days, as consolidation gives new
no-move career paths. Before, to get a raise, you had to move in most cases.

What is being missed is tha tthe model, at launch, of XM was to have 6
minutes of commercials on all channels. After about 28 months, they changed
this and the music channels were made commercial free.

> No, you bring numbers, not listeners. They aren't the same thing.

Advertisers require metrics. that means a cost vs. delivery index, called
cost per point. We do not talk about "listeners" on sales calls. We talk
about the cost to deliver one impression to one percent of the universe in

each metro, called CPP. Advertisers require this... in fact, since they buy Arbitron (ratings are done for advertisers, not for stations) they already know what the CPP is and any meeting of a face to face kind is generally to hammer the CPP lower.

Numbers are the base for most judgments in America. A baseball player is judged by RBI, ERI, etc. An employee by productivity per person. A car by MPG or horse power. Advertising is based on cost of delivery.

Yep. I find I can not usually go more than 8 years max with one company.
Now, I am in my 12th year with one, but I have gone from PD of a talk
station to multiple FM music stations, to national AM PD, to natioanl FM PD
to overseer of research and programming. So I have had 4 or 5 "new jobs" in
12 years. Before that, I worked in Ohio, Ecuador, DC, VA, AL, Puerto Rico (4
tours), Argentina, Mexico, AZ, and CA. And did work in 17 other Latin
American countries and Europe. If I do not move and change jobs, it gets
horribly boring.

It's funny, but true. I collect old Broadcasting Magazines, going back to the late 30's and have over 1000 of them up to the early 70's. I often grab a stack and just read them. It is amazing that the issues of 1946 are those of today.

Example: concerned parents and teachers in 1946 complaining about the bad influence of Tom Mix and the Lone ranger on youth, and how such shows foment laziness and lack of attention to school and teach bad habits. Fast forward. Protests against stations in the mid 50's for playing rock 'n' roll. Fast forward. Protests in the last few years about hip hop.

The back and forth on ratings is a constant. The protests against "too many stations on the dial for clear reception" are a constant In fact, the first in my collection is from a 1929 RaDex magazine, complaining that now that there were several hundred active stations, the dial was too crowded and something should be done to get it in order.

I particularly prize an article, also from Radex, about how radio is going to be ruined and become a relic of the past due to those awful long (one minute) commercials which will surely doom radio.

There is always some one like Eric who knows everything is wrong, but who can not come up with anything better, either. Of course, the world is full of bitchers.

Brian;

NiMh batteries will work fine. The charger in the Sat 700 is a stupid one;
it has no automatic circuitry in it at all, just trickle charges at around
65ma. As long as you keep that in mind when selecting and charging your
batteries, all will be well.

John

A spoon full of Baking Soda in a glass of water works for stomach indigestion.A spoon full (or two) in a cup of hot water works for getting battery acid off of auto batteries.A bowl of Baking Soda in the refrigerator works for keeping the regrigerator smelling ok.Bakng Soda is great for some food recipes.But,Baking Soda or White Vineger for removing battery corrosion from radios?,,,,, Forget It!,it doesn't work at all.

I went to the food store this afternoon and then I stopped at a gas station to buy some gasoline for my lawn mower.By that time,I had forgotten all about going to the Radio Shack store for a can of Deoxit.It doesn't matter that much to me anyway,I am not in a hurry.Maybe next week,I might think about it,maybe never.

Of course. You could go from your old position at an Infinity station
to leave as it's purchased by Clear Channel, or take a job at an...
Infinity station.

At Wal-Mart wages.

Or you could live in Clear Channel's dungeon in Texas, juggling 12
cities you've never been to.

"Facts" like IBOC is great and doesn't cause interference, or no one
ever ever listens outside of your arbitrary lines on a map?

Do you know -- oh, never mind, of *course* you don't. Anyway, most
innovations are made by kids in their twenties who simply haven't
learned that what they are attempting is impossible? Innovations and
discoveries ranging from General Relativity to FedEx.

Again, it's because they haven't learned that what they are trying is
impossible. They haven't listened to "experts" like you. "Experts"
deluded by their so-called "facts" that have no connection to reality.

> >

> Never heard it.

That's because you are a soulless mercenary who can't see anything but
his calculator.

There's a whole world out there. You ought to investigate it some
time. It is an amazing place, and none of your beliefs, rules and
"facts" apply there.

> > No, you bring numbers, not listeners. They aren't the same thing.
>
> Advertisers require metrics.

Yes, they do. But the metrics they get are based on a flawed model
that doesn't fit the world. It only allows you to maximize the number
produced by the model.

But, the emperor is wearing no clothes. Anyone willing to see it CAN
see it, but in your little world, no one is willing to speak up.

Eventually the emperor will catch cold and die.

But it'll be no surprise to us non-experts, the naive little children,
who aren't blessed with the wisdom of the insider -- we just saw a
naked emperor.

That, sadly, is no surprise either.

What is surprising is that, even after you got out of radio as a
business, that you *endorse* this way of thinking.

Not actively, of course, you deplore it in your statements. But you
say that it is the way it is, and that it'll never change.

But it will. Like the degraded HD signals, there will always be
another source of material. Podcasts with better fidelity than
digital radio. DVDs with full HDTV capability. Renegades like Marc
Cuban -- did you see his HDTV channel? Stunning! What passes for
HDTV from the major networks is, even now, substandard even compared
to analog NTSC! Europeans must laugh at that!

No, people will go elsewhere. The monopoly on care-free audio
entertainment held by radio is over -- it's now podcasts, satellite,
MP3/OggVorbis and the unkillable Hydra of file sharing.

Radio will go the way of the movie theatre -- a slowly dying
anachronism.

And we, the consumers -- the *customers* -- are poorer for it.

Have you tried the ilgdata file in conjuntion with Fineware's Radio
Listener's Database (RLDB)? Works quite well, in my opinion.

Since I prefer my frequency guide on paper, I like to download the
ilgsimpo file and convert it into an Excel document. After deleting
some columns, shifting and/or renaming some, abbreviating certain text,
reducing font size, etc., I come out with a decent product contoured to
my preferences. 250 pages (landscape, all columns on one page); so 125
pages, printing on both sides. Hole-punch the pages for a three-ring
binder. Requires a few hours to revise/format after downloading of the
files, but for a 6 month season, I find that it's more than worth it to
take the time...

As others have noted in this thread, though, it's good to be able to
refer to a variety of sources. EiBi is great; and for English-language
program listening, I wouldn't want to be without Daniel Sampson's
excellent PrimeTime Shortwave listings.

I remember when they made the change. I can't believe that when the
subscriber base is significant enough, and the measurements have been
refined, that there won't be a reversal of the policy, though.

Yup. And what are *you,* personally doing about it, besides blaming
Bush and screaming "Fuck Off!" at random people?

I've lived in a solar powered house for 5 years and had partial
solar power for the previous 10. This computer is burning photons as
I type.

I drive a high-efficiency, California certified low emissions car,
considered good enough to be exempt from annual emissions testing.
Judging from your mentality, I assume you drive either a shopping cart
(good for the environment, granted) or a VW bus.

So... what are *you* doing about global climatic change? Who do you
write to? What changes or sacrifices do you make in *your* life?

Or do you bitch and moan while drinking burned starbucks coffee and
smoking 3 packs a day?

IIRC, the driver who carried shipment of about 4 lbs of Pu from
Hanford to the Trinity site -- the world's complete supply -- required
a receipt from either Oppenheimer or Groves for 1 billion dollars.

"I shot a mushroom cloud over Reno, just to watch it die..." Sorry...

I think manglement will have plenty to do without worrying about my complaints. Whether I point them out to you or not, events will unfold to the detriment of radio.

And, of course, I've posted what I think you should do better: Throw away the model. Start over. Step one is, what is the density relationship between listeners and radius/*accurate* coverage maps? Then, what is the relationship between close-in listeners, further out listeners, and fringe listeners? What are the percentages of each? Not per unit area -- that's a different question, stated above -- but overall.
Final question would be how do I sell to each geographic area? Your so-called "fringe" listener may commute 30 miles one way across multiple current marketing ranges, but never changes the dail. How do you sell to him?

...but you keep ignoring that, with going on with, "butbutbut the *model* sez..." The model is obsolete. Actually it is worse than obsolete -- it never had an applicable time.

YOU, Eduardo, are the one who insists the model is right.
Advertisers may "call the shots," but they depend on your model for their metrics, and you are too myopic to see that it doesn't fit. You optimize your marketing to the model, and, if your lucky, you'll hit what we mathemeticians call a "local maximum." But it isn't the maximum, it's a minor peak.

The rest of the people out there are left wanting. And they'll move on.

And they'll move on whether I squawk about it or not -- I'm just telling you what's gonna happen.

> produced by the model.

Eric...you seem to be missing the essential point. The advertisers don't GET the metrics based on a model, the advertisers CREATE the model, they create the metrics. They create the tool. Not the stations. Not the consultants. The stations do what they do to make money with the advertiser's tool.

So to speak.

The advertisers call the shots. Not the stations.

Any appearance to the contrary is show biz. It's why I say that King Kong is only 3' 6" (with apologies to Eli Cross). What you hear on the radio is the magic. The bigger than life sound that conveys the indomitable spirit, the sense that the station is in control, and that service is personal and directly aimed at the listener. And to a degree, that's true. But only to a degree. Reality is that programming is a means to hold an audience between commercials. And that bigger than life sound...is an illusion. King Kong is only 3' 6".

The only thing the station has real control over is the creation of the illusion, and even that must meet advertisers' wants.

The advertisers create the metrics. They create the model. They call the shots.

Reality is very different on each side of the grille cloth. But the truth is that it's the advertisers who call the shots. Program directors, Sales Manglers, General Manglers, Disk Jockeys...even and especially production folk are there to facilitate the needs of the advertisers. And the advertisers are ONLY interested in numbers that fit their own model.

Oh, that failure of a station. replaced with what may be among the very,
absolutely best oldies stations in the US... originally designed by Kevin
Gorman of WMS fame (about the most legendary AOR station in US history,
too). M 105 was truly a dismal episode in Cleveland radio.

No, I don't. But for those, like yourself, who really don't like the
way things are going, I offer an explanation why things are the way they
are. IF you'll recall....I began my foray into this thread by explaining
why, if you're going to complain about IBOC interference, you need to do
so on the basis of LOCAL interference. That interference out of the
market is simply not on the radar.

I don't like it. But then Radio no longer serves me. So I don't use
it as much as I once did.

>
> Not actively, of course, you deplore it in your statements. But you
> say that it is the way it is, and that it'll never change.

No it will change. But it won't change the way you like it to. If you
want to change things in a different direction, which gets back to my
original point, you need to make some noise based on the way things
really are. Not the way you perceived them to be long ago in a galaxy

far away.

FCC will only hear complaints based on issues which they can embrace
based on the current mission they have for Radio.

> And we, the consumers -- the *customers* -- are poorer for it.

Poorer we will be, yes. But Radio will adapt. It's not likely to go
away. It will adapt as it has for 80 years, to changing markets,
changing competitive forces. We may not recognize it in a new form, but
it will still be there. It will survive.

> away the model.

Ok...I understand what you're saying. But, you see...it's not
Radio's model to throw away. It comes TO Radio FROM the advertisers. If
you want that to change, it has to start with the advertisers.

That's the point.

The numbers, the listener profiles, the bell curves, the demographic
and psychographic research...it's all done for the benefit of
advertisers, based on THEIR needs, Radio's. Ratings are not for Radio
Stations...they're for advertisers, and the statistical considerations
that define relevant numbers do NOT come from Radio stations...they come
from advertisers.

So, as easy as it is to say that radio should do things better and
throw away the model, things just don't work that way. Because the model
comes from the advertisers. Not within Radio.

Start over. Step one is, what is the density
> relationship between listeners and radius/*accurate* coverage maps?

> ever ever listens outside of your arbitrary lines on a map?

HD does not interefere with listened to signals. It interferes with signals
that are below the accepted listenability threshold.

There _are_ listeners outside the metro areas of some stations. they are
very few in all but a few dozen cases. That listenership is so small as to
be more an exception to the rule, and in most cases, it is to very big
signals that will continue to be big signals, HD or no HD. The signals that
HD is covering are not being listened to in any significant number, but the
gain from HD is perceived to be a far better proposition than saving a
handful of listeners... it is a trade-off to move radio into digital, where
it has to be.

I know of plenty of innovations in radio and related fields by people way beyond thier 20's. In advertising, david Ogilvy did some of his best work in this 50's. we are not taking about inventing stuff. Radio is invented already. we are changing the business model ever so slightly to adapt to the times, not reinventing it.

No, we are still int he first phase of the top markets, which is to get HD 2 programming on the air. The radios will not come until that is done. The less expensive radios are still in design phase, as the design specs were not released to manufacturers until November of last year.

That is because I do not pay much attention to the Hollywood left. I probably see more non-US films than ones made in the US.
>

Actually, they do because I get my data on radio listening by sitting down with listeners and talking to them. In every market, over and over every year. from Argentina to McAllen, and from San Juan to Karachi. I've flown over 2 million miles in the last 10 years alone. Getting out? I don't know where home is half the time.

Whatever that means. That is gibberish. Yabba dabba doo makes more sense.

The advertisers demanded Arbitron, they regulate it and they buy by it. Just as green means go on a stoplight, these are the rules of radio sales. They get to set the model because they have the money and drive what radio offers. They tell us what ages to program to, and what types of programming are of use to them. they also tell us they do not buy local radio staitons outside thier own markets, and we base our business on thier requirements, just as car makers in the US put the steering wheel on only one side of the car.

Personally, I do not think so. they severed all ties with the content providers they had who were to be compensated with sales rights on a percentage of inventory. I was programming 5 of the XM channels, Aguila, Caricia, Caliente, Tejano and Vibra from launch to the January when they made the change, and we had over 25 people working on the 5 channels. I think they poisoned the well when they did that.

Interesting point. I can't help but think, though, especially with Karmazin across the street, and his multiple revenue stream mentality, that when the base gets large enough to be attractive, that advertising based revenue streams won't appear. It would be nice if it didn't. But I can't see the corner offices letting that happen. It just makes no business sense to leave that kind of money on the table. Especially, with Wall Street looking over everyone's shoulder.

> relationship between listeners and radius/*accurate* coverage maps?

Arbitron, many other broadcasters, and I have spent thousands of hours and much computer time to show a very simple thing.

FM. 85% of listening in the 70 dbu contour. Over 99% in the 64 dbu contour.

AM, in major metos where there is lots of noise, anywhere from the 10 to even the 15 mv/m contuour determines where 90% of listening will come from. The decline is a straignt line down after that, ending around the 5 mv/m for nearly 100% of daytime listening.

Nights on AM are determined first by the staiton's interference free contour, per FCC, and then the field strenght for comfortable listening. Skywave, which is no onger consistent, is not a factor and all these night issues for AM are limited by the fact that night AM listening is very, very low (less than 3% of population) and not salable in most situations (exceptions are llocal brokered programs and sports).

> Then, what is the relationship between close-in listeners, further out
> listeners, and fringe listeners? What are the percentages of each?

It does not matter if the advertisers are not interested in anything but the metro. they play the fiddle, we dance for them. We are a service provider to advertisers. That is 100% of our business model.

> Not per unit area -- that's a different question, stated above -- but
> overall.

Who cares? We can not sell what nobody buys. The model for radio today was set sometime in the 50's after network radio died and TV took over night usage overwhelmingly. It owrks for advertisers, and as long as it does, they will continue to use it.

> Final question would be how do I sell to each geographic area? Your
> so-called "fringe" listener may commute 30 miles one way across
> multiple current marketing ranges, but never changes the dail. How do
> you sell to him?

There is no cost effectiveness in selling advertising outside a metro. There is no demand for listeners outside each staiton's metro. There is, therefore, no money to be made and the point is moot. Advertisers, if I did

not say it, set the rules. We provide services.
>
> YOU, Eduardo, are the one who insists the model is right.
> Advertisers may "call the shots," but they depend on your model for
> their metrics, and you are too myopic to see that it doesn't fit.

the model is totally set by advertisers.
1. Buy local radio stations for the local metro.
2. Buy nearly all spots in the 6 AM to 7 PM slots.
3. Set a metric for each market based on taret population and ad rates to
get CPP.
4. Hammer stations on the CPP.
5. Ignore any effort by staiton to try to distract from CPP hammering.
6. Demand local services, such as local talent on spots, remotes, van hits,
concert sponsorships, contests, etc, in thelocal market.
7. Hammer the CPP some more.
8. Demand more loclaized "value added."
9. Go back and hammer the CPP some more.

You shoudl see that distracting with an argument about liteners way outside
th emetro they are buying would produce laughter.

And, anyway, very few of America's commercial staitons even get a signal
outside thier metro. As I mentioned, less than 300 total staitons out of
13,500 even get ratings outside thier own market.

I think this is kind of a standoff. If one blinks, the other will shoot. But XM dropped the commercial avails when Sirius went all-music on the music channels, so this one will probably not work out for a long time. As it is, except for maybe the Stern channel and play by play, none of the XM or Sirius channels cume more than an average station in Huntsville, so an advertiser would have to buy nearly all the channels to get any impact.

The latest version of this file can be found at:
http://www.rdrop.com/users/billmc

Handy Shortwave Chart
Bill McFadden
billmc@agora.rdrop.com

Band allocations and time zone conversions for the USA. Includes broadcast bands used outside the USA. Also includes WARC-92 broadcast band extensions, which may be used before April 1, 2007 on a secondary (non-interference) basis. For multi-use bands, most common usage is shown. Some stations operate outside the official bands. Information is from Sep 2000 NTIA allocations table, see:
http://www.ntia.doc.gov/osmhome/allochrt.html

Frequencies are in kHz. Usual spacing in shortwave broadcast bands is 5 kHz. Frequencies above 10000 kHz tend to propagate better during the day; frequencies below 10000 kHz tend to propagate better at night.

Please e-mail suggestions and corrections to billmc@agora.rdrop.com.

Phone line as SW antenna
Bill McFadden
billmc@agora.rdrop.com

Changes preceded by "|".

WARNINGS AND DISCLAIMERS

Connecting unapproved devices to phone lines may be illegal in your area. Telephone lines present a potential shock hazard. Do not use this antenna for transmitting. Use at your own risk.

INTRODUCTION

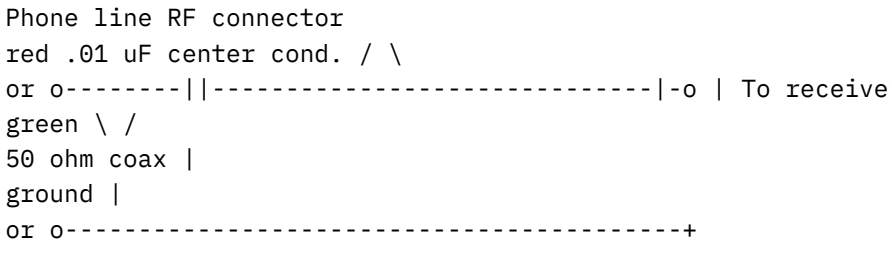
This article describes how to use a phone line as a shortwave receiving antenna. Performance will vary depending on the kind of phone line you have. Overhead lines usually make okay antennas, while underground lines usually don't. A phone line antenna will generally pick up more power line noise than a dedicated antenna, so don't expect to use it for DX work. Nevertheless, I find that it outperforms the telescopic whip antennas built into most portables.

A reader sent in this suggestion: If you're concerned about connecting the phone line directly to the receiver, try wrapping the phone cord several times around the receiver's telescopic whip antenna instead. Performance may not be as good as a direct connection, but it will probably be better than the whip antenna by itself.

Someone else wrote asking about lightning protection. I haven't thought much about it because thunderstorms are rare in my area. Most phone lines have lightning arrestors on them where they enter the house, but the lightning arrestors may pass enough energy during a lightning strike damage a receiver. My suggestion is to disconnect the antenna when not in use if you experience frequent thunderstorms.

HOW TO DO IT

The simplest connection is a single capacitor between the phone line and receiver. The capacitor eliminates all phone line voltages, including ringing, so that they will not harm the receiver.



N.C. = no connect. I originally connected the phone line ground (yellow wire) to this terminal, but reception was better without it (if you do this, play it safe and put a .01 uF capacitor in series). If another ground is available, you can connect it to this terminal.

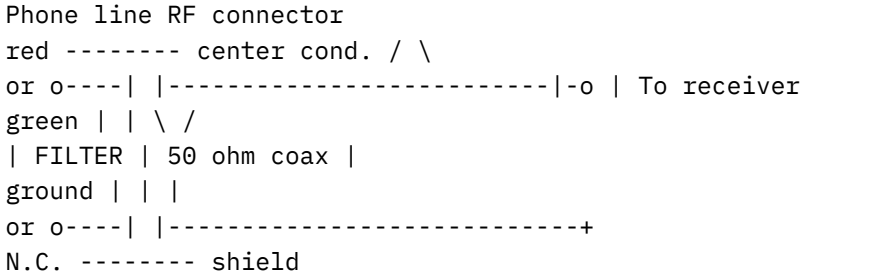
If you are picking up local AM or FM radio stations on the shortwave bands, it is likely that your receiver is overloaded. Inexpensive and portable receivers usually lack the filtering needed to eliminate this interference, but you can make your own filters. Filters can also be purchased from some shortwave dealers.

A high-pass filter can be used to remove signals below the shortwave bands. It rejects interference from local AM stations and presents a high impedance to the phone line at audio frequencies so that the phone line remains balanced.

A low-pass filter can be used to remove signals above the shortwave bands. It rejects interference from FM and TV stations, as well as VHF 2-way radio transmitters. If you use both filters, connect the output of the first filter to the input of the second (don't forget to connect their ground terminals together). It doesn't matter which filter is connected first.

By the way, these filters also work well with random wire antennas. Just connect the antenna in place of the phone line.

The filter(s) should be connected to the phone line in this manner:



FILTER PLANS

The original credit for the high-pass and low-pass filters goes to Paul Blumstein and John Shalamskas, respectively. Edited versions of their articles are included here:

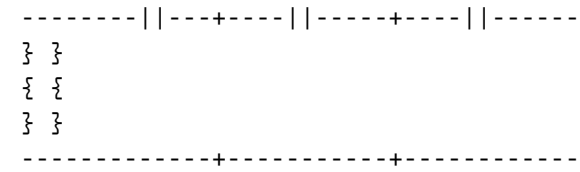
Date: 09 Jan 91 00:54:08 GMT
From: paulb@harley.TTI.COM (Paul Blumstein)

Subject: BC Band Hi-Pass Filter

The following ascii-schematic diagram is a high pass filter that will filter out Broadcast Band (MW) stations. I found it a great boon to my shortwave listening since local MW stations overload my ATS-803A front end & appear in SW, especially with a long antenna.

If you remember my antenna saga, I went from 50 feet to 150 feet & had overload problems causing me to cut back to 50 feet. (Even at 50 feet, I still have some MW interference). I took the advice of Gary Coffman and looked up filters in the ARRL Handbook. With the filter in place, I intend to try to increase my antenna length again.

Anywho, here is the filter, for interested parties.



The outer capacitors are 1500 pf ceramic disks.
The inner capacitor is 820 pf ceramic disk.
The squiggly things are coils (two total). Each one is 2.7 uh.
(a close value will do).

Date: 12 Jan 91 00:44:25 GMT
From: bill@videovax.tv.tek.com (William K. McFadden)
Subject: Re: BC Band Hi-Pass Filter

I built the filter that Paul Blumstein posted recently and measured it on a gain-phase analyzer. Here are its characteristics:

100 kHz -120dB
500 kHz -68dB
1000 kHz -38dB
1600 kHz -15dB
2100 kHz -3dB

The source and load impedances were 50 ohms. Because the filter has five elements, the attenuation is 30dB per octave. The measurements confirmed this.

This filter seems to be a good compromise between interference attenuation and passband response. There is very little attenuation in the 120m band and above. It could use a little more attenuation at the upper end of MW, which could be done with more stages or a higher cutoff frequency. Alternatively, you could build two of these filters and put them in series. (Since two 1500pF capacitors in series are really 750pF, you could eliminate one cap.)

Just for fun, I put 470 ohms in series with the input to see how the filter performed with an antenna mismatch. The response was:

100 kHz -105dB
500 kHz -60dB
1000 kHz -35dB
1600 kHz -15dB
2300 kHz -3dB

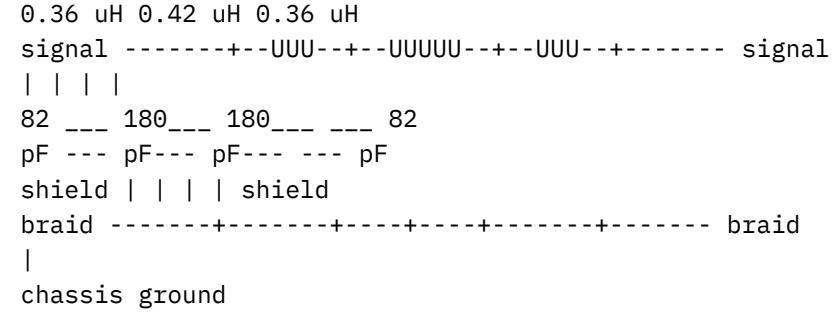
These figures are normalized to the passband response of -15dB, which is due to the impedance mismatch between the source and load and would have been there without the filter. Hence, the filter works almost as well in spite of the mismatch, which is good news to those who use long-wire antennas.

Date: 22 Apr 92 08:59:33 GMT
From: johns@uhunix.uhcc.Hawaii.Edu (John Shalamskas)
Subject: Construction of filters for SW reception

Several people have asked for construction details of the filters I built for my DX-440.

The high-pass filter helped some, but in my location the VHF/UHF broadcasters are also causing problems. So, I dug out the ARRL handbook and chose a 7-element Chebyshev low-pass design that is -3 dB at 35 MHz, -20 dB at 43 MHz, and -50 dB at 64 MHz (all calculated; it works well in practice!)

LOW-PASS FILTER (Rejects FM, TV, etc.)



I had to do a little more improvising at this point. I used .33 uH instead of .36, and .66 uH instead of .42, but it works fine.

The 5-lug terminal strips were perfect for these circuits, since there are 4 lugs plus a grounded lug. All "ground" connections go to the lug that is mounted to the chassis, and the other 4 lugs are used for each of the connections on the signal line. One terminal strip is used per filter. Since both filters were necessary to clean up the hash, I am going to put them both into one box when I get the time.

The proper way to connect them is in series, i.e.

signal in ------- filter 1 -------- filter 2 -------- signal out

There is no difference between ends. They are "bilateral" which means you can't possibly hook them up backwards. (In the above schematics, left and right ends are interchangeable.)

COIL WINDING

You can make the coils yourself using this formula:

L = 0.2 * B^2 * N^2 / (3B + 9A + 10C)

L is the inductance, in uH
A is the length of the coil, in inches
B is the mean diameter of the coil, in inches
C is the diameter of the wire, in inches
N is the number of turns

For small wire, you can assume C = 0.

PARTS SOURCE

All of the parts for the filters can be obtained from the following source:

Digi-Key
http://www.digi-key.com/
701 Brooks Av S
P.O. Box 677
Thief River Falls, MN 56701-0677 USA
Voice: 800-344-4539
FAX: 218-681-3380

PART DIGI-KEY PART NO.
82 pF capacitor P4023
180 pF capacitor P4027
820 pF capacitor P4184
1500 pF capacitor P4187
0.33 uH inductor M8007
0.39 uH inductor M8008
2.7 uH inductor M8018

The cost of these parts is less than $1 each.

Begging your pardon, Eduardo.. but you're full of yourself and of something
else that decorum doesn't allow me to mention. I don't live in the middle of
```

cities, and most places I HAVE lived, the so called "city contour" doesn't reach where I live.. and some of those places have even been within city limits. IBOC DOES INTERFERE WITH LISTENED TO SIGNALS. Not everyone lives in your perfect radio world. And the FCC, Ibiquity, and station engineers that run stations with IBOC shouldn't be arbitrarily deciding that I or anyone else is not important. It's a very good way to get a portion of their anatomy handed to them financially.

Shades of the Chicago radio wars.

Satellite Radio should be very exciting to watch in the coming years.
If it survives long term, it should be quite a show.

Every system on Earth is ''solar powered''. Some directly convert the
light to voltage, some use stored sunlight from 50 million years ago.

The fact that you use technology to lash out says way more about you
than your PV panels or your little car.

If you really cared you'd admit that I'm right about our criminal
government.

XM To Launch Regional Channels Despite Congress' Pending Bills

With a huge banner touting "6 Million Subscribers" facing the U.S. Capitol and dangling off the side of its D.C. headquarters, XM Satellite Radio has announced it will introduce six new regional news and talk channels that will, for the first time, bring XM subscribers regional news coverage for every area of the continental U.S.

The subscription radio provider said the channels would be added to the lineup during the late spring or early summer. Details about the new channels will be provided prior to launch, XM spokesman David Butler told R&R. But he stressed that XM will not deliver signals to specific zones and will offer them nationwide to all subscribers.

Butler said the delivery of the regional channels will mirror that of XM Channel 160, which in early March began broadcasting Clear Channel News/Talk WLW/Cincinnati. All seven regional news and talk channels are to be provided by Clear Channel and will comprise a new category on the channel guide. The channels will sell advertising and the revenues will be split by XM and Clear Channel, Butler said.

Word of the new channels comes as two bills in Congress wind through the lengthly legislative process with the end goal of stopping XM and Sirius from offering local programming and, more importantly, local or regional advertising.

The Local Emergency Radio Service Preservation Act of 2005 was introduced 13 months ago in the House by Reps. Chip Pickering and Gene Greene. The Congressmen introduced a similar measure the previous Congressional year, but it failed to gain momentum. The current version has 118 co-signers.

A companion bill was introduced about two weeks ago in the Senate by Olympia Snowe, with colleagues Max Baucus and Trent Lott as co-signers. Both the house and senate bills would prevent satcasters from providing "services that are locally differentiated or that result in programming being delivered to consumers in one geographic market that is different from the programming that is delivered to consumers in any other geographic market." The NAB backs the legislation.

105. More on Las Vegas detonation: Non Ideal Airblast Effects from Urban and Natural Terrain

Newsgroup: rec.radio.shortwave
Date: 2006-04-01 14:04:25 UTC
From: David <rickets@knac.com>
Message-ID: <c12t2299b44loee6ig8ja8itbj902kjokn@4ax.com>

Non Ideal Airblast Effects from Urban and Natural Terrain

Joe Crepeau, Charles Needham, ARA

Abstract:
Non-ideal airblast is produced from detonations over urban and natural terrain. Mechanical effects of a blast wave reflecting off non-ideal surfaces produces shielding and channeling effects that may be considerably different than those from a detonation over an ideal surface. Work in the area non-ideal airblast generated from urban and natural terrain is presented.

Divine Strake is a high-explosive (HE) test sponsored by the Defense Threat Reduction Agency (DTRA) and is scheduled for the summer of 2006 at the Nevada Test Site (NTS). The test is a detonation of a 700 ton buried heavy AN/FO charge above a tunnel structure. The main purpose of the test is to study ground shock effects on deeply buried tunnel structures. Of secondary interest is the airblast produced by a buried charge and its modification as it propagates over the local terrain.

Sandia National Laboratory (SNL) recently sponsored a number of computational fluid dynamics (CFD) airblast calculations of the upcoming event. SNL contracted Applied Research Associates, Inc. (ARA) to perform two- and three-dimensional (2D and 3D) predictive airblast calculations for the test. The CFD calculations were run with SHAMRC and characterize the airblast environments induced by the non-ideal charge configuration and the surrounding terrain. They include 2D calculations with and without terrain and with a responding and non-responding ground model. A single 3D calculation with a non-responding ground model was also completed. Results of the calculations provide test planners with environments that can be expected at instrumentation and test structure locationS. A single, 3D calculation with a realistic ground model is planned once the charge and detonation site details are finalized.

ARA has also completed several SHAMRC calculations investigating non-ideal airblast over urban and natural terrain under a contract with DTRA for the Near Surface Weapons Effects Tools ï¿½ 3D (NSWET-3D), Airblast/Thermal task. One set of calculations modeled a nuclear detonation in New York City. The buildings were generated automatically from ArcView shapefiles, placed on a flat ground surface, and modeled as non-responding. One of these calculations was run under the Capability Applications Project (CAP) sponsored by the

Department of Defense (DoD) High Performance Computing Modernization Program (HPCMP). Another set of calculations modeled the Smoky nuclear event at NTS. The calculations included models of natural terrain, thermal heating of the terrain surface, and dust sweep-up from the surface.

Oh, I hear what you're saying -- I just don't believe my ears.

An advertiser wants to sell product -- nothing more. He doesn't care about the media used to do that. He hires someone to do that work for him, and this is where your so-called "radio expert" like Eduardo comes in.

Advertisers didn't create Arbitron -- so called "marketing experts" did.

Fine. Radio *stations* didn't create the model, but the radio *industry* -- which includes these so-called experts -- did.

And they'll never change. They can't go in and say, you know, our model has grossly misrepresented the listener and potential revenue source -- in their minds, they'd lose all credibility, and they can't have *that.*

If Ace Hardware wants to buy time on the local station, the manager of Ace doesn't go look up Arbitron figures -- he (rightfully) calls a specialist -- an agency that deals with radio in the (wrongful) expectation that they'll know what they are talking about.

You are correct sir! Another thing that helped them get cancer was the
studio trucking in the contaminated dirt onto a soundstage in LA so the
shots would match.

Practically everyone in that movie got cancer sooner or later.

Perhaps you need to brush up on (among other things) the concept of a
career.

If you'd worked in radio, insurance and chemical engineering, that
could be considered three different careers. When you graduated from
fry man to burger flipper, that's not a change in career.

Care to rephrase that?

You have quite a bit of writing on usenet about leaving CBS and
Chicago radio, about boards designed by you and personal equipmentleft
behind that you don't even want to go back to retrieve.

So, please explain Peter: What, exactly, drove you out of radio,
consistent with your past writings?

121. DX-398 & Sony AN-LP1

Newsgroup: rec.radio.shortwave

Hello rec.radio.shortwave group - I'm selling a DX-398 with the mod that increases antenna sensitivity and the AC adaptor, and a Sony AN-LP1 antenna. Both pieces are about 5 to 6 year old and I've used them at home and when traveling. I'm the orignial owner and I have the original boxes and documentation. The DX-398 recently developed an audio problem that sounds like the speaker is being overdriven; however, being that the radio is not abused, I suspect the solution lies in the circuitry and not the speaker. Someone with more electronical skill than I can probably resolve the problem. This is a nice combination and I'd prefer to sell them together. I'm in Atlanta. Tom - powerst@ix.netcom.com

Why all the fuss about ILG's passwords?
I can't find anything special about ILG's web site. Maybe I'm missing
something? Please explain.

You can create your own custom schedules!

Download a small BASIC program, which will extract data of your interest
from the bc-a06.txt file!
Or any bc-xxx.txt file.

For example, all Japanese language broadcasts OR all transmissions active at
22.15 o'clock...
You'll need MS QBasic for this).
http://www.susi-und-strolch.de/eibi/dx/browser_e.html

The current summer schedule (A06) is not yet available on this site, but
work is in progress.
This is the current version (approx. 50%):
http://www.susi-und-strolch.de/eibi/dx/dx_e.html

The FCC in the HD review mad a reasond decision that the small amount of interference to secondary signals was overwhelmed by the need to give radio some form of digital capability. The loss of fringe signal reception was deemed to be a similar situation to the decison to break down the 1-A clear channels back in the 70's, thereby reducing the service areas of the (few) 1-A's in the US as there was evidence that their night skywave reception was on the wane and the public would benefit from more stations.

In the present situation, the FCC considered the stability of the broadcast industry in not creating a new band for digital, and decided that some interference was acceptable in exchange for an in-band system that created a digital broadcast capability. There are now several more countires adopting HD, starting with Brazil and several in Asia. Mexico has stations on already, although the system is deemed "experimental."

When 85% of the actual listening occurs in the 70, and nearly all the
remainder in the 64, it is tough to defend protection beyond the 54, which
is both 10 db down and where essentially no listening of consequence takes
place.

I found the station so lacking in memorability I could not "click" on the
call letters alone. When you posted the on air name, I did remember it as
being atrocious and well worth changing to WMJI, which has a multi decade
history of being a fine, personality, fun radio station.

I know Cleveland... from Bill Randall on WERE and Mad Daddy and Alan Freed
on WJW to Color Radio 14 to Big Wilson on WJW and NormBob's creation of WIXY
on to the artful WMMS, General Cinema's and Nationwide's efforts at FM CHR
in the 70's, etc., etc. Part of my family has been in local media for a
number of generations. And I know that what apparently is your favorite
station was low in the rating, a sales failure, and soon forgotten.

Actually, every system on Earth is "nuclear powered." Most indirect
ways of retrieving that power are non-renewable, in that they can't be
replaced at the rate they are created.

> The fact that you use technology to lash out says way more about you

> comes in.

An advertiser does not hire me. An advertiser either hires an advertising manager, who is thier employee, if htey are small. If they are big, they have a marketing department who hires an ad agency. The Ad manager or the ad agency simply looks at the audience data, selects the stations that reach the age and sex targets they have at the best rate, and buys them.

And the media used, whether radio, TV, cable, outdoor, print, magazines, direct mail or skywriting is determined at the highest levels of the marketing department of a company, not by radio or other media sales people. The ad campaign is designed for specific media, and each medium is selected based on its effectiveness in the specific campaign. the advertiser cares vitally about which medium or media is used.

You are blaming radio people for what is a marketing issue at the client end and an ad agency issue in the intermediary stage for larger clients.

At RAB convention after RAB convention, it is stressed that radio has to be easy to buy, or advertisers will not use it. The easiest way to buy raido is the way it is done... a calculation of cost to reach each listener in the local market.

That is it. No magic, no myster, no Oija board. Just a cuantification of cost per listener and the exchange of money for a service.
>
> Advertisers didn't create Arbitron -- so called "marketing experts"
> did.

Advertisers created the need for Arbitron. the founders of Arbitron, which began to measure radio in 1965, saw a need for what they were doing in television in the radio business, consulted with many ad agencies, and launched the service. Arbitron became the standard by selling itself to advertisers, thus forcing radio to have to subscribe as it had become the accepted currency. Radio had practically nothing to do with Arbitron starting a radio service... advertisers did.
>
> Fine. Radio *stations* didn't create the model, but the radio
> *industry* -- which includes these so-called experts -- did.

Nope, we wer ehappy with Pulse and Hooper, which were much cheaper. Both folded because staitons had to switch to Arbitron as that is what the customers were buying from.

The ACE account is handled by ACE's national agency, which subscribes to Arbitron for radio buys. Funds are paid part by the corporation and part by a pool of local Ace operators. (Ace is, essentially, a franchise or coopperative)

In the small, unmeasured markets, coop money allows the Ace owner to buy local radio within restrictions and be reimbursed for part of it.

Yeah,but I dont know that German kraut language.I know a teeny weeny bit of Vietnamese language though.

Because I learned how to talk a few words of their language (to the Vietnamese wimmins,of course) on the spot in Vietnam in 1964.The only way you can learn a furrin language is by being there.

The Gang's All Here flick movie is on the FMC tv Radio channel now.I have always liked them old musical movies.

What does the WRTH say about local radio in the Falklands? They
were making quite a bit of money on Squid fishing licenses to the
Asians, so maybe they've got a bunch of local FM there, now.

It wouldn't have anything to do with the fact that they never used
their call letters for anything other than the required station ID?

> When you posted the on air name, I did remember it as
> being atrocious and well worth changing to WMJI, which has a multi decade
> history of being a fine, personality, fun radio station.

M-105 was always in a tight race with WMMS for listeners. It was such
a bitter rivalry that whenever WMMS won the ratings war they sent a
dead mouse to the M-105 offices. (...which goes to show what a class
act WMMS was, but I digress...)

They were very popular especially among the people who cared about
their audio quality. I have a 45 minute air check from back in the
day that I'll drop in just as a reminder of "what once was" in
Cleveland radio.

WMJI was a hack. Corporate music of the worst kind. Inspired by a
vending machine, just like you.

Again, you are absolutely full of shit. How Peter can find anything
respectable about you is beyond me.

Actually, it probably is the speaker. Both of mine developed same
problem and other owners have reported same. There is a $1 replacement
speaker available I was able to find. About a 30 minute repair
job....most of which spent trying to get the case apart.
Makes a world of difference.

You can hear the results here.

So, suddenly, when it is convenient, you believe in ratings.

WWWM never came close to WMMS in ratings. Not even close.

> It was such
> a bitter rivalry that whenever WMMS won the ratings war they sent a
> dead mouse to the M-105 offices. (...which goes to show what a class

That is typical radio mind-gaming. When I beat Rick Dees in Birmingham, we
sent a funeral wreath up in the elevator. In Phoenix, I heard of a PD being
sent a live ewe. wind up chickens, vegetables (especially big carrots) and
such are frequently exchanged between rival stations. This is fun rivalry,
and is part of what makes radio entertaining. You obviously do not have a
sense of humor.
>

Who cares? It was a losing station. It had to change format, it lost so bad.
Radio is flexible that way... a format that does not work can be change,
literally, in hours.
>
> WMJI was a hack. Corporate music of the worst kind. Inspired by a
> vending machine, just like you.

And even now, #1 in Cleveland. It is giving what may people want to hear. WWWM did not do this, even if you liked it. See the difference?

I am starting to understand you. You are an elitist, believing your taste is sooooo good it should be emulated by others, while the taste of the masses is inherently evil. You despise things, not because they are bad, but because you don't like them and think anyone who does is wrong.

WMJI is Cleveland's great radio station, and has been for some time. You are simply unable to accept that it is doing what a lot of people want.

To you, success (WMMS, WMJI) are bad. Failure is to be put on a pedestal, such as WWWM. You are like don Quixote... except that you joust with great radio stations instead of windmills.
>
> Again, you are absolutely full of shit. How Peter can find anything
> respectable about you is beyond me.

I got you pegged. You want things your way, even if you are the only one in the country who wants it that way.

I believe the set button is for setting the standby function.

I seem to remember mine, which I no longer have, having a little button
on the back which you had to hold to set the time. Be sure the two AA
cells that are used for backing up the time and memories are good, the
other four don't matter.

BTW, doesn't the external case take C's, not D's?

The last RadioShack I went to, (this is a good story, really!), the
"kid" working there took a new scanner that a customer puchased and
hooked it up to the store's PC. Loaded all the local freqs including
TRUNKING freqs in a minute or two.

Blew my socks off - I'd have guessed a 17 year old would have sold the
scanner and said, "have a nice day".

Made me think of even buying a new scanner...

Well, for instance, a station that is listed on mine is overpowered by another station from 150 miles away! Disgustingly, the station I would like to hear is a one of a kind station in the area, the station that overpowers it is a Spanish speaking station.

Sigh.

Guns are for wimps!

I just love saying that on the CB near a truckstop. Sit back and
listen to the joy!

Actually, no, it didn't advertising agencies and research bureaus did.

That's why the numbers are SOLD to Radio. In fact, the all the
limitatins on how the numbers are gathered, accessed and used, are
placed on Radio. Advertising agencies have access to the data through a
variety of sources.

Radio didn't create the model. The Radio Industry didn't create the
model. Advertisers and the companies that serve them did.

And Advertisers define the model, and how it's used, according to
their needs.

You said it yourself....advertisers may call the shots, but they do
not have the best interests of Radio at heart. You were exactly correct.
If the model were created by or for RADIO, it would benefit RADIO. It
doesn't. It benefits ONLY advertisers.

> If Ace Hardware wants to buy time on the local station, the manager of
> Ace doesn't go look up Arbitron figures -- he (rightfully) calls a
> specialist -- an agency that deals with radio in the (wrongful)
> expectation that they'll know what they are talking about.

>

Actually, if Ace Hardware wants to buy time on a local station, they get the numbers from their in-house agency at the regional or national level. The strategy is devised, the budget is created, and the buy is defined: which stations, which dayparts, how many spots, what they're going to pay for them, and how they rotate. THEN, they call the stations and tell the stations how the buy is going to be placed, and how the money is going to be allocated, and what value added they expect for free in return for considering them on the buy.

The station is actually, when you look at the whole picture, only laterally involved.

It's the advertisers who create the demand, the terms, the specifications, and the meaningfulness of the numbers.

And if you think that agencies have a warm fuzzy relationship with Radio, guess again. Agencies have a Hate-Hate relationship with Radio stations, and treat radio people with the kind of contempt generally reserved for herpes ridden ex-lawyers working at used car lots.

> Radio is flexible that way... a format that does not work can be change,
> literally, in hours.

I know a thing about format changes. But it wasn't a losing station.
It was successful, which is why it was *bought* and *changed* so it
wouldn't compete with WMMS.

WMMS was quite successful too, but only in promoting Peter's "3 foot
King Kong" myth. They overcompressed; everything above 8kHz was
noise. But they were THE HOME OF THE BUZZARD and had cool giveaways.

Those things do impress a 15 year old kid who hasn't got the best
hearing. I knew some of those kids back them -- but they grew up.

And WWWM's low-key approach to music would have -- and did, for some
of them -- appeal to 'em. When they changed ownership, those people
didn't go to WMMS -- they held their nose and went to WGCL/WNCX.

Or, they listened to *me* on the college station.

Pricket's domain?

>
> WMJI is Cleveland's great radio station, and has been for some time. You are
> simply unable to accept that it is doing what a lot of people want.

A lot of people want background noise. WMJI supplies that. I do want
content, and WMJI is devoid of that.

>
> To you, success (WMMS, WMJI) are bad. Failure is to be put on a pedestal,
> such as WWWM. You are like don Quixote... except that you joust with great
> radio stations instead of windmills.

You finally got one thing right: I am a sucker for a lost cause. But
the lost cause in this case is the radio industry. Perhaps in the
future you'll get your due -- your name will be remembered in the
phrase "Eduardo Engineering" -- the process of running a station into
the ground.

>
> I got you pegged. You want things your way, even if you are the only one in

> consistent with your past writings?
>

Being on air wasn't my primary responsibility. In fact, I had
voluntarily hung up my headphones a few years before I left the company.

What drove me out what Radio had become. As I have explained, both
here an elsewhere, I had grown embarrassed by what Radio had become. I
could no longer endorse what I could not support. I had been a quite
```

vocal opponent to Telecom '96, and had some pretty intense discussions with manglement about why I would not sign and send in the form letter distributed through the company to my Congressmen. I refused to endorse a product that was carrying such a big part of the station's budget, that it actually got a spot in the station's booth at public events. And there were other things involving some high level persons that good taste suggests I not reveal publicly (and as you've probably figured out, good taste is NOT my strong suit...so that should give you some ideas of how distasteful these matters are). So rather than live a double life, I left Radio to be what it has chosen to be, left the station to be what it has chosen to be and went off to do other things. Many other things.

It had nothing to do with being miserable. I enjoyed my life in Radio. Even the abusive program directors and sales ducks didn't diminish my eagerness to get up in the morning and face the day. But as time went on, there was less of my life and more Radio than there should have been for balance. If work exists to fund one's life, then surrendering one's life to fit in more work is lunacy. But even that could have been tolerable if it weren't for the internal conflicts. Having to face myself everyday as a member of a class that I couldn't endorse.

One day the warning light went on. And I laid down my key and walked away.

I"ve entertained opportunities since. Some at stations I've enjoyed listening to in small doses. Actually had a great offer from another company in town.

I'm just not interested enough to devote what it would take.

It has nothing to do with being miserable. Hell, if I'd been miserable, it wouldn't have taken so long.

Actually, there are very few live and local shows.
WLW has them, as does 1360 Homer, but outside
of the morning shows (and Jerry Springer on the
Air America outlet), not much is done other than
standard DJ clips.

Normal, yes, but if you were a listener of the losing
station, it was not fun to see your station
blown apart with the only alternative being a
station 50 miles away in another market. Or listen
to WRNO in certain parts of the day via shortwave.

Yeah, I know. Tough potatoes. But if listeners had
as much clout as the arbitron ratings imply, you'd
think that homogeneity wouldn't be the order of
the day.

Having been in three myself, I've seen the company
doing the buying stating that they want the people,
but then they lay off half of the development staff.
Or, in the most recent case, relocate the jobs to India
and Slovakia, and lay off most of the development
staff.

> In a merger, the old company IS hte new company. The two unite; that

Maybe that's the case in radio, but not in a lot of
other cases. I know of a company that I used to
work for who'd use a merger as an excuse
to dump a lot of low performers on the street.

value.

I've seen it happen several times in the Cincy area,
the most recent one being the switch of 1530 from
50's-60's easy listening to 50's-60's pop. (It's now
an Air America outlet, with all of those DJ's now
gone, too.) Most of the easy listening DJ's left or
were canned, and a bunch of DJ's who happened
to be available when 103.5 went from 50's-60's pop
to 70's pop joined the station.

Another scenario is when a station decides to go
to a talk format like Air America or the standard
conservative fare of Rush, Hannity and Co. The
DJ's aren't needed, so sayonara to the DJs.

So? The hits in America are cosat to coast hits, in most cases. Local differences are more due to the competitive arrray than any fundamental difference between regions and zones, so the big AC hits are the same, the big urban hits are the same, the big CHR and country hits are the same. Sure, each market has differing ethnicities and lifestyle groups, but the songs played on a staiton in a specific format are going to be very similar all over. This goes back decades and decades and decades.
>> all.

The "DJ clips" in Cincy are live in most cases. they are just not very long, and are what the format requires. They are not coming from San Antonioo or someplace else. they are live in the market. Don't you understand taht, outside of mornings, FM music listeners do not want talk, they want music? This is why off-prime shifts can be pre-prepared with voicetraced jocks in smaller markets.

When stations are "blown apart" it means that they were not successful. It means they were losing money. From the mid-50's through the mid-90's, fully half of all US radio stations did not make money, you know. Technology and consolidation have mitigated this situation to some extent, but there are many bad facilities and many overly-radioed markets where money will not be made.
>
> Yeah, I know. Tough potatoes. But if listeners had
> as much clout as the arbitron ratings imply, you'd

If a station tanks in Arbitron, and stays tanked, it changes format.
>

That is not usual in radio, as it is hard to get those Hungarians and Sikhs to sepak American English over the WAN to record the voice tracks. Most radio staff is sales, which is necessarily live and local.

We are talking about radio. What you describe is far less prevalent in radio as radio staitons can not centralize.
>
> I've seen it happen several times in the Cincy area,

> to 70's pop joined the station.

This is normal when formats shift. But the formats shift due to the inability of the existing one to get good ratings. This has been the case since Top 40 was invented in August of 1952... jocks who get bad ratings get fired. Stations that get bad ratings change format. In the end, the total employment does not change much... but the individuals change as the formats change. All of us in radio knew this when we started in radio. It is, like all entertainment businesses, inherently volitile. How many TV shows get cancelled in thier first season? the folks working on them go on to other shows, or wait tables in Studio City or Burbank.
>
> Another scenario is when a station decides to go
> to a talk format like Air America or the standard
> conservative fare of Rush, Hannity and Co. The

It may surprise you to know that DJs are a small percentage of station staff. there are always more sellers than jocks, and more office staff than jocks. And many of the behind the scenes jobs continue irrespective of the format. There is nothing inherently bad about this... it is just part of being in an entertainment-related business. In TV, the technicians, accountants, managers best boys, gaffers, Foley operators and such don't get fired. They just go on to the production company's next project. It is the talent that moves around... just like radio.

Actually, they did not. They were far less sophisticated, and undermeasured ethnic group members and many lifestyle groups. Since then, Arbitron has developed DST, where they use special techniques to insure proportional participation of Blacks and Hispanics and get adequate young adult male participation. the current product is vastly better than it was even 10 years ago.

WMMS was owned by Malrite. Malrite did not buy WWWM and change it. It was changed to stop the money losses and to try to make money, which they did acheve; WMJI has long been the highest billing Cleveland staiton.
>
> WMMS was quite successful too, but only in promoting Peter's "3 foot

And it was the #1 station in the 1985-1982 period where WWWM existed. It never came close to giving WMMS a run for the money, whcih is why it lost money and changed.
>
> Or, they listened to *me* on the college station.

Now I see. Another free-form radio proponant. Yawn.

I have not done it yet. And I am currently having the biggest run of "Worst to First" experiences I have ever had... 12 major markets, in fact. That is because I listen to listeners, and help build stations that appeal to them and, thus, appeal to advertisers who want to reach those listeners. It is that simple.

178. Re: ILG Radio Database for the A06 - Whats so special about ILG?

Source record: 69385

Hello.

< Why all the fuss about ILG's passwords?
I can't find anything special about ILG's web site. Maybe I'm missing
something? Please explain >

ILG's database is very useful to those of us who own AR7030s, JRC
NRD-535s or 545s, and/or Ten-tec RX-320s and use Jan Arkesteijn's
RxWINGS computer-control program.

This database can easily be incorporated into the RxWINGS program and
then the user can select the parameters he/she desires and have the
program automatically search the database for stations meeting those
parameters. Then you just click on the station and there it is!

For the program listener, I know of no other program which allows this
to be done so easily. It is in fact easier than using a "TV-Guide" type
program for your television or VCR!

And the ILG database is more accurate than any other of which I'm aware
with the exception of Daniel Sampson's PrimeTimeShortwave, which is its
equal.

Best,

Joe

I think you may have missed what many companies became by not staying in
radio.

I would not like to be at CBS, Clear or a couple of the huge companies. But
I love being at one of the smallest of the Top 10 radio companies.

The ability for radio to be big, after 96, allowed radio access to capital
markets. It allowed companies to be big enough to get good benefits.
Clusters allow internal promotion without moving. And there are fewer of the
scary "mom and pop" managers and owners who drove me to leave US radio in
'63.

I have "owner" mentality as I have been an owner and a pretty autonomous
manager for other companies. I find I can be "agent of change" as our CFO
called me without fearing being fired. I can suggest dramatic projects, such
as changing the format of nearly a quarter of our stations in a 90 day
period, and get listened to and even have the project approved.

I am having a lot of fun right now, in radio.

I'll have to speak up and say that I dig ILG big time.

Perhaps the reader I use makes it more usable for me. OS X only:
http://homepage.mac.com/jimwatson and it is free. He also offers a
nice free darkline/MUF map that automatically syncs with WWV for
current data.

You may be right. And I've thought about that in the last couple of
years. I do know that I had way more fun in smaller companies than I
did in the larger. But then with the larger companies absorbing the
smaller ones, how far can I really get from the CBS's and the CCU's?

Hell, when I came back to Chicago, I was working for a smaller
company. In 11 1/2 years, I worked for 4 different companies. My desk
was in the same spot the whole time.

>
> I would not like to be at CBS, Clear or a couple of the huge companies. But

Dan Mason, when I started at Cook Inlet, said to me that getting to
the top was fun. BEING there is not as much fun as you think, so enjoy
the climb, because that's the most fun you'll ever have. I like much
smaller companies. And if I ever did get back into it, it would be for
a smaller shop with big aspirations.

Was it Leader in an editorial in R & R about 15 years ago, or was it
the AOR editor...anyway, he said that his dream gig would be working a
weekend shift at the #2 station in LA. That would be sheer Heaven in Radio.

I gotta agree with him. Well, maybe not LA....but Chicago....

>
> The ability for radio to be big, after 96, allowed radio access to capital

> '63.

Oh, I know the benefits, the economics. But as you and I have bashed each other in the face about over the years, I find the homogenization boring. I like the smaller local outlets, with locally generated playlists that don't follow the national trends point for point. I like surprises when I listen to the radio. But then I also like new experiences in other things, too. When I travel for business, I don't care for Holiday Inn's or Airline travel. I take my motorcycle through the back roads, or down the Great River Road. And stay in some mom and pop motels. Some of which can be pretty...um...exciting...Even at the destination, I take an off the beaten path room. Take my meeting, record my audio, and ride back an entirely different route.

I like lumps in my gravy, too.

And along the way, I get to hear some small, privately owned, often GOD AWFUL radio stations, that are, if nothing else, amusing. But they're always representative of their home town. And I like that. I don't go the back way to find the same experiences I get at home in Chicago.

And, from time to time, I experience some real treats. There was a station in Central Illinois...had a signal that reached across Missouri and into Arkansas, that played nothing but bluegrass. It was wonderful. Picked it up north of Decatur, and rode it all the way to Searcy, Ark.

I don't hear that kind of thing since 96. So, I burn up an iPod, instead.

I never met dan, but always heard good things about him. that statement
confirms them.

I have always liked building new stations, or creating "new" formats. That
is why I tend to move around. I build, from ground up, over a dozen in
Ecuador, and dozens more since them. It is staying at the top once you get
there that is toughest, but it requires a different personality than mine...
which is why I now like to work in teams of two or three in programming so
that we have builders, craftsmen and strategists all together so stations
stafy fresh and fun, but are always trying new things within the confines
of the format.

I do not think companies where the PDs never talk to the CEO or COO can
create this type of culture... which makes me think that a limit of maybe 80
to 100 stations would be the limit for a company to create really good radio
on a local level.
>
> Was it Leader in an editorial in R & R about 15 years ago, or was it the

Maybe, because I am at the #1 and #2 stations in LA, that does not have
appeal! (tounge inserted in cheek here). I can see what he meant, though. e
on a good station, in a shift that has less pressure but makes you feel part
of that same sucess... would be pretty neat.
>
> I gotta agree with him. Well, maybe not LA....but Chicago....

I can still remember hanging around the door of WLS to get a jock card
signed by all the talent... from Holman and Roberts to Biondi... I still
have it. Chicago had fun radio. Our traffic person in LA did traffic years
ago for Spuer CFL, and has lots of fun stories. That was a classic Top 40
battle, and I owuld have enjoyed being closer to it.
>
> Oh, I know the benefits, the economics. But as you and I have bashed
> each other in the face about over the years, I find the homogenization

We are 70 stations, and every playlist is based on 100% local market research. None are the same, except for our newest project which is an Adult Hits network, out of LA, that is very personality based. In its case, we dound the same songs research the same way in every one of the 12 markets... so no reason to reinvent the wheel. the determining factor was, "were these songs you liked as you grew up?" and ther eis 100% consensus. So there is no single answer for local vs. national, and in this case, we have some incredible talent no single station could afford and we bring it to places like McAllen and Albuquerque! We even have an in house travel coordinator, as all the talent goes to the different markets all the time, originating from the local station and doing appearances.

I far prefer an imaginative explantion to a dry recitation of the presumed facts. The Hidden Knowledge SW broadcasters can be very imaginative fitting facts into their fixed world views.

Also, the end-timers and conspiranoics are making the best possible use of SW radio. Of all the electronic media, radio demands, and rewards, the most from our imaginations. Even more so with SW radio, as we mentally error correct for missing syllables and words.

Or, as Alex Jones would say, "People, fill in the gaps!"

>
> You aren't Al Patrick -- you have a functioning brain -- surely you

Sometimes I think it would be fun to do H. L. Mencken style rips into the Spokesmen of God and the Quack Medics and rest of the Boobosity. But I do admire them for their cleverness, if not their conclusions. And, on the larger scale, whatever damage the Hidden Knowledge crowd may do is done by persuation rather than by compulsion.

Our KSCA in LA originated the idea on its morning show. This was after the
100 thousand plus turnout for the one we organized at WOJO in Chicago.

Yes, QRM to AM. Funny, in an ideal DRM SW environment, there would be 10 kHz channel spacing, no AM signals, only DRM signals - the receiver would be muted unless it was succesfully receiving.

Could this mean
DRM = No QRM?

How would one characterise QRM in the DRM world?
What would one do with SINPO?

Tom

WBCQ ANNOUNCES THE TIMTRON NETWORK!
For immediate release, April 1, 2006 http://www.wbcq.com/

Monticello, Maine -- WBCQ is pleased to announce The Timtron Network, a new 24 hour shortwave service for our listeners worldwide. Starting on Monday, April 3, WBCQ will commence programming on our two new 250 kilowatt transmitters for listeners in North America, South America, Europe, and the Mediterranean. The Timtron Network features the following programming:

0000-0200 Radio Timtron Worldwide, Pashto/Urdu Edition
0200-0330 Dr. Becker's Magic Mushrooms
0330-0415 Southern Kansas Farm Report & Rock'n'Roll Show
0415-0600 Duckpin Bowling Tournament Coverage
0600-0700 Radio Timtron Worldwide, Portuguese Edition
0700-0830 Subgenius Ministry, with Rev. Susie the Floozy
0830-0945 Radio Morania External Service
0945-1100 Icelandic Fishing Show, with Dr. ï¿½stï¿½ï¿½r ï¿½gï¿½stsson
1100-1230 SWL 101, with Dr. Smilkstein
1230-1330 Cadaverlac Corner, Tips & Tricks for Mobile HF
1330-1600 Rag Chewing Radio Show, with Old Buzzard Hyram
1600-1800 Radio Timtron Worldwide, Pig Latin Edition
1800-2200 Slop Bucket Theatre (broadcast in upper side band)
2200-2300 Slow Scan Television Theatre
2300-0000 Vindaloo Cooking Corner, with Alice the Cat

The Timtron Network will broadcast on the following frequencies and times (all times UTC):

0000-0600 6900, 3295
0600-1200 15060, 6080
1200-1800 13555, 11660
1800-0000 21735, 6925

Our new 500 kilowatt longwave service on 179 KHz will simulcast The Timtron Network starting on April 15.

WBCQ welcomes listener feedback and will issue QSL cards for verified reception reports. Thanks for your interest, and we look forward to hearing from you! (via John Norfolk, dxldyg via DXLD)

Computer control of your receiver using databases like ILG adds a new dimension to Dxing. I like using SWLog.

SWLog, a radio control, logging and database program has recently been updated and now includes support for more receivers. This program is the most extensive SWL multi-function program available. Features include local and remote receiver control; integrated database support for HFCC,ILGRadio, EiBi, PTSW and seven other database formats; propagation prediction; audio capture; chat; extensive logging capability; report generation and QSL generation in ten languages.

The program now interfaces to Ham Radio Deluxe and permits both programs to work together with one or more receivers.

Bob Sillett, the developer of SWLog, has been working on this program for years and keeps adding new features. The best part is the price: FREE.

Try it out at http://www.shortwavelog.com/default-english.html

202. BBCWS 7160 jammed at 0300?

Newsgroup: rec.radio.shortwave
Date: 2006-04-01 23:50:44 UTC
From: running dogg <run@ning.dog>
Message-ID: <psGdnRXKvLNOjLLZnZ2dnUVZ_s6dnZ2d@comcast.com>
Source record: 69409

On Friday morning at 0300 (Thursday night in California) I tuned to the BBC's West Africa service on 7160 because 6035 was weak. I thought there was that same data transmission on top of it. But no, it wasn't data, it was a BUBBLE JAMMER! It was unmistakable as an old fashioned bubble jammer, the real simple type. Fortunately the BBC broadcast was stronger than the jammer and I was able to make it out ok. WHO would want to jam BBCWS English to West Africa-and only on 7160, 6035 was unaffected? 7160 originates from Ascension. The only African nation I'm aware of that actively jammed SW was Zimbabwe, and they stopped when SW Radio Africa went off the air on SW (they still broadcast on MW). Is anybody else hearing this jammer over the BBC on 7160 at 0300?

Currently, yes. But someday, from the looks of it, DRM will =
International Broadcasting for the most part.

Believe me, I'd rather set back a few years (heck a few months when I
could still "steal" the 5975kHz BBC broadcast to Central America... but
DRM has got to get a whole heckuva a lot cheaper if it is be the
transition.

Until then, the Sat 800 will be the last SW radio I buy (well, there is
that Degen 1108 supposed to be out by the end of the year...)

I guess there'd only be "S". Or a complete rewrite of receiving conditions. I haven't heard a DRM signal before, I do not have a radio with the needed 12kHz filter so I haven't even tried hooking it up to my computer. But that defeats the whole reason I like shortwave - I can take it with me and not have to be tied to a computer just to hear stations.

Calling someone a freak is not judging. It's either a compliment or
an insult.

Elected public servants are, by nature, subject to constant scrutiny
and evaluation. It's part of their jib. They ask for it and it is
our duty to give it to 'em.

I see! I print out my custom schedules on an as needed basis.
Besides, I don't allow any digital hash anywhere near the SW
radios/antennas.
Computers, no matter what kind, simply raise the noise floor which is where
the DX begins, as one infamous poster said.

My finger does the tuning anywhere my radio happens to be. What can be more
simpler than that?
I'm not tied to the internet or the laptop or...

To each his own, carry-on.

That explains why they're testing in a flat desert like Groom Lake as
opposed to downtown San Francisco or L.A.
Of course it would improve the terrain of the latter for future "ideal"
testing among other improvements.

7160 is/was a Radio Republica frequency beamed toward Cuba. The b05 sked had them on from 2300-0400. So Radio Republica is possibly still using 7160 for a06 (Which I'm not hearing here right now at 0250).

In any case the frequency was being jammed by the Cubans, and probably will be if Radio Republica is using it. When Radio Republica has changed frequencies in the past at times the jamming continued on the previously used frequency until the Cubans finally figured out that RR had moved.

I'm still using my grandfather's Hammarlund Super-Pro. (BC-794) At
least 50 years old.

It's been retubed over the years. Aligned every 5, and will be
recapped this spring.

If Radio Republica was using 7160, I'm CERTAIN that I would be hearing
them instead of the BBC. But if you weren't hearing RR at 0250 (I didn't
check before 0300 to see if RR was there) then it's likely that they've
moved, and the Cubans are jamming an empty frequency. It makes you
wonder who is in charge of jamming at RHC. (Let me guess-NOBODY.)

I was just listening to Hauser and he said that Radio Republica has moved to 5910
2300-0400. Hard for me to tell if Radio Republica is there or not, presently I only
hear the bubble jammer.

Lloyd is an occasional writer on this group. Ususally what he writes
about is odd politics or a vendor or person he has suddenly latched
onto with utter devotion -- to the point once where the advertiser
posted publically here telling him to shut up about his product
because he was hurting sales.

Lloyd's grip on reality varies, which leads me to suspect that he is
or has been on treatment for mental illness. When lucid, he is a
reasonablly good contributor. When not lucid, he generates an odd mix
of anger, pity and disgust.

Google on his name if you really want to know more.

XM and Sirius are allowed to carry terrestrial stations, and they do. XM just added ones like WLW, in fact.

What satellite radio is not allowed to do is originate channels for individual local markets using its terrestrial repeaters. Almost every large metro is filled with ground repeaters, which are capable of being used to provide individual local channels in each city... prohibited by the satellite licenses.

244. Reflections on good and evil

Newsgroup: rec.radio.shortwave
Date: 2006-04-02 06:35:14 UTC
From: researchone@lorenzocrescini.it
Message-ID: <1143959714.081993.314380@i39g2000cwa.googlegroups.com>
Source record: 69451

My name is Lorenzo Crescini and I'm Italian. These "Flashes on
Good and evil" reflect the same mood characterizing the Flashes on
the Holy Gospels and Turin's Holy Shroud I wrote in Africa: making
myself useful to our Lord Jesus Christ.
I will start by quoting the best Prayer to Jesus I've ever read.
At the very beginning some reflections concern the devil one.
I thank all those who will read me, write to me, will ask for an
explanation and those who will be able and willing to advertise what
they read by Web, the press or however they like.
I am confident that the last of my Reflections containing a few lined
short account of my life, will be devoted to all of us who are proud
of the Lord.

Web site
www.lorenzocrescini.it/reflections
personal e-mail for communications
ricercapap@lorenzocrescini.it

Best regards

Here are three Reflections as an example

24) One cannot or mustn't say to those who are ill and suffering: "
That's God who puts you to the test". In this way we would offend
The God of Endless Love who cannot wish our suffering. One needs say to
those who suffer: " God's Son himself suffered because of evil, but
you will also resurrect with Him, as He did". That is the truth and
only the truth can give one who suffers the Hope which won't let him
fall into that despair the devil one wants to seize his soul and
conscience! Saying: "it's God who puts you to the test" gives a
suffering man the same relief a learned lecture on food chemistry gives
a starving one.

29) We can give or take from God, Creator of all things, nothing,
except for two things: we can take from Him Honour by offending Him
with our refusal, we can give Him our love, by accepting Him in our
heart! With what insolence might we wish or boast His Light one day,
we, if we had denied Him all life long, being able to believe Him and
not doing that?

38) There are many Evangelic miracles showing the spontaneity of a
memory, neither built nor adapted, which nevertheless is engraved in
the memory of those who were present to the event. It is from conveyed
small details that the truth of the memory of a lived and handed down
episode transpires.

Maybe you can answer this: how come a dual-conversion receiver gets images of mediumwave signals while tuned to a longwave frequency? I hear 1050 khz when my E5 is tuned to 150 khz. So one of the IF filters is 450 khz.

I agree with you about the computer raising the noise floor. However, you can still effectively use this program to print out the schedules you want. SWLog has extensive report generation and will print out a report based on a merged database of all the popular formats you download including your favourite EIBI. That way you wont miss anything. It will also print out the logs of other users that have uploaded to the User Community

Another method is to power down your computer and when you find something of interest boot up and see whats in the database. I should mention that the database is resident on your hard disk and so you don't need an Internet connection at all once you have retrieved the schedules. It also will transfer the data to a Pocket PC if you would rather save paper and trees and have a minimal noise solution.

Just an idea - each to his own

Good DX - Roger

Typo or do they really blow every two and a half *WEEKS*???

If your time statement is correct, you have an electrical problem,
probably an intermittent neutral in the power feed to your house. Call
your power provider.(Even though the cheap Chinese bulbs they sell now
have a short life, it's not that short).

| Hello everyone
|
| I think seperate bands for "normal" broadcast and DRM would be the
| solution.

It's not a solution for the broadcasters. They would have to spend twice for broadcasting the same program for all listeners. They couldn't use the same transmitter/antenna to move from analog to digital if the band changed. Furthermore this would waste frequency resources.

So do I. I like the detailed info ILG provides for each entry. In fact, if I were permitted only one frequency guide, I'd go with ILG.... provided the schedules were being released in a timely manner.

It's good to see that the A06 scheds have come out promptly. With the B05 scheds, though, there was such a delay that a lot of folks here were speculating on whether ILG was simply not doing scheds any longer.

I agree, SED. The radio + computer thing doesn't work for me. I've
tried it a few times. Just not my cup of tea.
I, too, simply print out scheds. Just printed up a revised ILG A06
sched last night in an Excel file: 133 pages. Drawback: if/when ILG
comes out with an updated A06 file, I'm unlikely to go through the
hassle of revising/formatting and then printing up the later file.

That's because it's DRM. That's Radio Canada's DRM test, with (I think)
a relay of World Radio Network. A sequence of hour long relays from various
broadcasters.

Because the broadcast industry is the nation's premier special
interest. No competition is allowed.

Think about who broadcasts all those campaign commercials just
before an election. Think about who controls what sort of image
an elected offical has in the public mind.

> > "signal" fed govt is "really sending" with that bomb.
> > cuhulin

Rather simple...there are no "iron" bombs today..they all have guidance fins.....some have LASER or GPS guidance packages that steer the weapon to the target area.....more importantly is that they are lobbed not dropped from the airborne platform..you don't see the aerial platform launching it, and it flies at a well-behaved trajectory...add a rocket motor to the rear end of the bomb (rock-eye) and it flies even further...most importantly you can spot the target with a laser beam or GPS fix, and the weapon can hot the target within 1-8 meter radius...not to worry about an accident unless someone jams the GPS and fouls the Laser system and the computer goes wild and....this is not WWI technology....

Better worry about the "Clinton" navigation system on the Chinese missiles (before they were INS, Inertia guided...now with the computer technology we gave them and help from abroad, they can hit with reasonable accuracy the USA)...or the MIRV Stealth missiles of Iran....now they purchased a new Russian rocket motor, they should be able to hit the east coast through Philadelphia...not just England through the Spain arc.....

I was not sure which newsgroup to ask this question ,but since I subscribe to this one I figured someone here would know the answer. I have a TV which might be 12 or so years old. I use rabbitears to pickup the my stations (no cable or dish). If I purchased a new TV today would I still be able to use it in 2009 with rabbitears when the stations convert from analog to digital? Would I have to use a conversion box? I asked the question at a number of places (Best Buy, Radio Shack, Sears), and no one knew the answer. I have heard that Bush might chip in for a conversion box. The TVs I am looking at cost around $250 and are flat panel. I like the fact they are light, and I can connect a DVD player to which I did not have much luck with my current set (picture but no sound on some DVDs).

Thanks

Tom

If you buy a TV Monitor,you can only use either a cable tv or satellite set top box to watch any tv channels at all,rabbit ears will not workd for a TV Monitor.When the big switchover to HDTV happens in 2009,unless you subscribe to either a cable tv or satellite tv service,you wont need to buy a converter box for HDTV.I bought a new Phillips HDTV 30 TV Monitor.I subscribe to DirecTV www.directv.com I will not need to buy a HDTV convertor box. www.philipsusa.com

I paid $549.00 plus Mississippi Ripp Off! Stupid sales taxes at a Wal Mart store a mile and a half South of Blueberry doggys couch (South is always best) for my new Philips 30 HDTV Monitor.(now watch them freaks out there start knocking my new Philips HDTV TV Monitor,I guarantee you,they will do it every time)

Thing is though,all of the old,old tv programs/movies I like to watch on tv are the old,old mostly black and white tv programs/movies and they are not in HDTV format and that suits me just fine.

Seeee,,,, its not like I really needed a new tv,but I am only sixty four years young/old and I figured what the heck,I will buy meself a new flat screen wide screen Philips TV Monitor to watch my favorite old,old movies on,so I went and done it. www.tvpredictions.com Life is short,Live a little.

296. 14.313 Fan Looking For Nostalgic Recordings

Newsgroup: rec.radio.shortwave
Date: 2006-04-02 21:59:15 UTC
From: John Dodds <iqtenm@yahoo.com>
Message-ID: <N6J8XR0L38810.2494791667@reece.net.au>
Source record: 69552

Back in the early 90s, when the war on 14.313 was going full-blast, I used to tune in every evening and found it more entertaining than anything on tv.

I wish I'd recorded everything I heard, but didn't. These days, I live on a small lot and have no room for an outside antenna, which means the noise from the pcs swamps any shortwave reception. So even if 14.313 is interesting today, I'll never know it.

I was wondering if anybody has recordings of the bad old days of 14.313, or, for that matter, of the 75 meter stuff with Big Al and the crew there.

I'd be happy to buy them, or copy them to mp3 format and return them to you on CD.

If you have any for sale or trade for conversion to mp3, please let me know.

A $250 TV that you can buy today will not have the ATSC tuner required for over-the-air digital TV reception; you will have to spend more. Whether indoor rabbit ears or UHF loop antennas will work for digital TV reception very much depends on signal strength and control of multipath. If you get good analog TV reception with no ghosts, you will likely be in luck. Most digital TV transmission is on UHF.

Another Tom

TVs without a High Definition tuner will need a conversion box. By 2008 all
new TVs are supposed to be made with built in HD tuners... if I recall correctly.
Owners of older televisions are gonna be SOL.

Look around, there is a newsgroup on HDTV. Basically, you will need a converter box (Set Top Box or STB) to use your old analog TV after the switchover to HDTV. If you buy a TV that says "HDTV" on it (make sure it does because not all flat panel TVs can accommodate HDTV) you will still need a converter box that acts as a tuner. When you buy an HDTV set you are in effect buying a MONITOR like a computer monitor, without any input it's just a paperweight. When HDTV first came around companies were selling the tuner in a separate unit from the monitor because standards weren't finalized yet. But when the standards WERE finalized, the electronics companies realized that forcing people to buy separate tuners and monitors instead of an all in one unit (like an analog TV) dramatically increased their profits. So you will need a STB that has an input for an antenna (a special antenna is required for HDTV, rabbit ears will not do) or you will have to subscribe to a cable or satellite TV service.

> Would I have to use a conversion box?

Depends on the TV. You're looking for the buzzword "ATSC tuner". If
the new TV has one, it should work without a conversion box.

The FCC is phasing in a requirement for this "ATSC tuner". Large-screen
sets already must have one, though you might find a few on the shelves
that were made before the requirement kicked in. Smaller sets won't
require it for another year or so.

> I have heard that Bush might chip in for a conversion box.

The legislation that requires the closure of analog in 2009 also allots
money to offer vouchers towards the purchase of converters. Each
voucher would be worth $40, and a household could obtain up to two
vouchers. (though I believe you could only redeem one per converter -
you couldn't get $80 off on a single box)

Right now the converter boxes are selling for between $200 and $300 new,
though many observers expect those prices to drop.

In most markets the digital signals are already on the air, so if you
were to buy a digital receiver today you'd be able to enjoy the improved
picture quality (and in many markets, extra channels) well before the
deadline.

I recently picked up a used Sony 2010, and with its built-in 4-ft.
whip antenna, it actually picks up the SSB nets on frequencies like
3922 and 7245. Not as well as with my 80 meter dipole and Icom
transceiver, but still, you'd be surprised what a decent SW radio will
do with an inside antenna, even with flourescent lights, PCs, 2 TVs
etcetera. As I'm writing this, I tuned in some net on 14,306 -- loud
and clear...

I own a Zenith 1000 Trans-Oceanic transistor Radio.It didn't work at all when I bought it at a Goodwill store about ten years ago and it still doesn't work now.I checked and cleaned off any of the battery corrosion I saw in the battery compartment and I installed fresh new batteries in the radio,still no luck.

I haven't tried to remove the chassis from the cabinet to see if there are any wires that might have came loose,I can solder any loose wire back together,if there are any loose wires.I dont know how to check for whatever else is wrong with the radio.Does anybody have any ideas?

That's an interesting number. Karmazin said something similar in
a staff breakfast when we were learning to do things the "Infinity way."

That got my attention.

It was compelling listening, to be sure. I remember riding in the
back seat of my cousin Barry's Impala driving around River Forest....one
hand on the wheel one hand on the radio, arguing with his friend about
whether Frijid Pink was heavy enough.

Those were some scary rides.

Well, at least you have some local presence. Too often that's not
even on the radar. And the station sounds kind of generic, and detached.
Q102 in Iowa City sounded like that. Automated and automated well, but
still detached. Dry almost.

>>> I am having a lot of fun right now, in radio.

Thanks for the advice. I'm still having my own fun, today. And
Radio is largely, at least for me, lost it's place at the center of my
media wheel. As I said, I don't even listen that much anymore. But it's
good to know that there was some evolution after Telecom 96.

Radio adapts.

That reminds me,I better get started looking for some Tobacco plants I can grow in my back yard. www.google.com Mississippi Tobacco Growers

I have a little electric grinder thingy like the kind that are sold in department stores,it is about the size of a 12 ounce plastic jar of Folger's instant coffee.That should be just about right for me to grind up my home ground Tobacco for making my cigarettes.

Poll Question: Do you think gun control laws reduce crime ?
Should Guns be kept in a house with kids?
Should federally-gun buyback programs continue?
Should shooting be banned as an olympic sport"
Should there be stricter gun laws ?
Should Gun Laws be Relaxed?
Should all Guns be kept at Shooting Ranges?
Is it OK for people to carry concealed Weapons?
Should manufacturers be liable for misuse

People have mixed feelings about whether tougher gun laws or stricter
enforcement are the most effective way to cut violence
and killings and we here at Aussieseek want to know.
Vote or encourage your supporters to vote in this survey
the results of which will be distributed to all media worldwide
The battle in the arena of public opinion is a warm-up for the battle
in the halls of government. Here's how you can stop the passage of laws

restricting freedom, and promote reform of existing laws that infringe
your rights
Thank you very much for your Opinion. You must login or register to
vote. A Vote for a topic will be considered as the afirmative

IF YOUR ANSWER IS A YES TO ANY OF THE QUESTIONS THEN GIVE IT YOUR VOTE

There has been much discussion on this board of Lately with many
questions unanswered on the Gun Debate.

Lets Find some Answers as we put it to our members with the
2006 Aussieseek GUN POLL QUESTION

All the BBC cultural programs are available on the internet. These include drama, music, lectures, comedy at all levels from academic to popular. I was able to get them clearly with no buffering problems with my old IBM laptop (166mmx). I think I was using Windows Media Player 9 but there was no pop-up so it might have been the BBC player. The BBC website is:
<www.bbc.co.uk/radio/aod/mainframe.shtml?/radio/aod/wservice_promo.shtml>
The European site that lists many netradios is:
<http://makela.info/wmp.html>
The programs appear to be archived for seven days and the site has many listener aids. It was a real pleasure to hear programs of such variety and quality. Too bad they are no longer available on shortwave.
Thanks to Juha Setala who first posted the websites.

332. OT They're deporting the wrong people!

Seems to me that government, as usual, has everything backwards. They deport illegal immigrants who work in the hopes of improving their lives. That's very wrong.

What SHOULD be done is repayment in kind.

People who are sent back must become illegal aliens themselves upon their arrival in the destination country.

"It's brilliant, but just how can this be done, Mike?" I hear you say..

We send back those types of people already born here that don't work, push crack and pop out multiple welfare fund draining babies at an alarming rate. It's a Winning solution. The recipient government gets the now illegal dregs. That is worth it for the revenge factor alone.

We get hard working people with a positive attitude in return. The population number stays the same while productivity increases.

As a trial run, I'd like to propose a sweep of the unemployed dregs in, say, Holland, MI. That *completely* random choice would give an indication of any unforeseen bugs the proposed system may have.

A temporary working title for this revolutionary DE-migration program could be"

"Operation America WORKS"

It is bad about that recent shooting here in Jackson.That sort of thing happens all too often around here and all over U.S.A.That shooting took place at a good place though,right there in the parking lot area at UMC.UMC is University Medical Center,it is a great big huge Hospital.

Not so far North in Jackson though.Go North a mile and a half on Dixon Road behind my house and take a right (East) on Clinton Blvd.About two miles further on,Clinton Blvd turns into the name of Woodrow Wilson Blvd.Keep on going about three more miles where Woodrow Wilson Blvd connects to North State Street and UMC Hospital is right there,you can't miss it.The great big Veterans Administration Hospital center is right there next to UMC.Look it up if you want to.

Hey,if I ever have to go under the knife again (onliest operation I have ever had before was a gall bladder operation at St.Dominics Hospital here in Jackson in 1969) I will go back to St.Dominics www.stdom.com Hospital.Screw all those other Hospitals,I dont trust them.

Source record: 69593

Printing out scheds is a good idea for lots of folks. However, I would rather print out a schedule that was not just based on ILG. The merged database in SWLog is far superior and has a lot of frequencies/broadcasts that are not in ILG.

I suppose one can always buy WRTH, Passport to World Band Radio and Monitoring Times if you want to be "computer free". I would rather pay nothing and have comprehensive up-to-date schedules printed on paper or on the computer screen.

Each to his own - Roger

339. (OT) : Inter-American Freedom Trains to the Great White North

M II,

Inter-American Freedom Trains to the Great White North :
I still like the Idea of Sealed Trains going from the Southern US Border with Mexico to the Northern US Border with Canada and Transporting 1-2 Million Economic Freedom Workers {Please Do Not Call Them Illegal Immigrants} seeking International Human Rights from Mexico to Canada for the Next 10 to 20 Years. This would truly transform Canada into a real Internationalized Nation of Cultural Diversity.

Also, give Americans and Canadians the Instant Right of Dual Citizenship in Mexico by UN Decree : Requiring that any and all Court Proceedings for them be done in their Country of Birth; and Full Property Rights and Ownership of Real and Personal Properties and Business Interests in the Nation of Mexico {Mexico Inc.}. This would truly transform Mexico into a real First World Nation of Economic Opportunity and International Human Rights for All the Freedom Loving Peoples of the World.

I Had A Dream of Can-Amer-Xico a Truly North-American Nation
With-Out-Borders with Economic Opportunity for All ~ RHF

Hi...

Not if you are like me, a TV DXer who likes to monitor foreign TV via
E-skip or tropo (I live in south FL, where I can catch Cuba if I drive 3
hours to the Keys).

Actually, I can hardly wait until my local channel 2 in Miami goes
off...for me, all I can use anymore for E-skip here is ch 3, as 2/4/5/6
are too strong, generally, even during skip season. I still have
some countries I have not caught, and ch 2's in El Salvador &
Nicaragua will be available. Bring it on.

Check to make sure all the transistors are secure in their sockets. It doesn't take much to loosen them. Take a voltmeter and check to see if the full battery voltage is appearing at the plug-in socket at the chassis. If you don't get 12 volts, there is a break in the battery circuit. If there is an earphone socket, check to see if it is stuck open or closed by plugging in earphones. If these tests go nowhere, the neat thing is to check the transistors.

342. Re: G.E. Superadio II re-alignment

Well, we have trouble outsourcing our farms.

Funny how when Mexicans come here as ultra cheap labor to help our economy
they are branded scum and illegals, yet when big corporations outsource jobs
we don't seem to mind as much and in fact say it's good for our companies
bottom lines and economy.

I'd argue that except for the talk and news
stations, most people don't want talk in the
mornings, either. I stopped listening to
commercial radio in the mornings when the
signal to noise ratio plummeted to where
if I was lucky, I'd get a song once every
15 minutes. If that.

Yes, but if a station is losing money by the bigger
station using a third party as a shill to drive the
competition out or by lowering advertising costs
to the point where the other station can't compete
smacks of Walmart-ism and the sort of things that
Standard Oil used to do. Legal? Probably. Ethical?
No.

Unless the owner can afford the losses, or decides
to move toward a public radio or community radio
oriented format. The beauty of a WAIF is that the
members run the station; everyone who contributes
money to the station has to sign up to do some
work at the station. They also can participate in
the staff meetings, too, and can have their own
radio show if they get a slot open. It might not
work for the big broadcasters, but the big broadcasters
aren't exactly playing shows like the "Rockin' Surfin'
Show"or the "German Tunes of the Queen City",
either.

It is more volatile than ever before; there is no
patience with letting series develop. There are
many famous examples of shows that were
given a bit of patience and the station was
rewarded with a hit down the line. The less
patience shown with media by the bosses,
the less likely it will be to build audiences with
anything other than the instant hit.

I also don't think that it's an accident that when
this volatility began to increase, the prevalance

of the Morning jock yapping began to increase
as well.

As with the audio slugfests that sometimes erupt on 80 meters I think
that most of us simply tuned away. It really was nothing more than a
small core of bored old hams continually badgering each other. Can't
imagine why anyone would spend the time and tape to record hours of
repetitive rantings, bodily sounds and key overs.

I own some little portable analog tv sets.I expect when the big switch over comes in 2009,they will all be dead in the water.Will new little portable analog tv sets be made and sold in the stores? I doubt it.

I think It will be a dead industry as far as those little tv sets are concerned.There will be many millions of little portable analog tv sets that people own that will be useless,unless they can hook them up to converter boxes.I still hope HDTV never makes the big switch over.

Confused he may be, but essentially David is right - a public official is open to far more criticism and judgment than any private individual. In public affairs, they are deservedly held to a higher standard - after all, it was in their campaign promises that they claimed to be the best at what they proposed to do - and if they fall short, they deserve *all* the scrutiny and criticism, and utlimately judgment, that they receive.

Being "American" isn't really a prerequisite for this condition, certainly government officials the world over deserve to be tested in the public arena and hoisted by the seats of their own petards if they screw up - *but* - in the United States, private citizens have a right to more privacy and less scrutiny than a public official, *in matters that are essentially public*...and public officials know this getting into the game. They're big boys. They can take it...they persevere or else they fall on their own merits. If they don't like it, they can lump it. I don't differentiate here between any political parties...they all get the microscope treatment. Right now it is GWB's turn on the hot seat, and that's all there is to it. He deserves what he gets.

Space Weather News for April 3, 2006

http://spaceweather.com

Solar activity is suddenly increasing. The biggest sunspots of the year are crossing the solar disk; one group is longer than 10 Earth diameters and poses a threat for solar flares. Meanwhile, astronomers are monitoring a large and delightfully complex prominence dancing long the sun's limb. Whether all this will translate into magnetic storms and auroras remains to be seen. Please visit http://spaceweather.com for pictures and updates.

RD,

HDTV Antennas :
"(a special antenna is required for HDTV,
rabbit ears will not do)"
So... are these HDTV Antennas made out of super
special "Digital Wire" {Metals} ? ? ? ?
Actually a plain piece of wire or coat hanger will do
the reception may not be great by it will work for HDTV.
- - - It's the Tuner {Transmitter} that makes it HDTV
{Digital} not the Antenna of Monitor.

HDTV and Cable or DSS TV :
[No Problem with a Set-Top-Box (STB)]
For the majority of people who either have Cable TV
or DSS TV which are both now sending HDTV {Digital}
Singles through their systems; an Old Analog TV will
do OK for now and past 2009. The Set-Top-Boxes
will do the conversion and there is no need to change
until the TV is dead {inoperative}. Then you can decide
to buy a Monitor {Screen without a Tuner} or a Fully
Functional HDTV with a built-in HDTV Tuner.

FWIW - We have Comcast Cable up here in them-there-hills
and when they have a HD {Digital} Signal Problem the System
reverts back to Analog and you can see the 'difference' in the
On-Screen-Picture Quality.

Cheap HDTV and Walmart :
At one point about a year ago; Walmart announced that
they were coming out with a HDTV with built-in Tuner for
under $500 under one of their own Brand Names; but as
of yet I have not seem one in any of their stores.

HDTV Prediction :
I would expect that by 2009 a standard size {small}
20-22 Inch HDTV with built-in Tuner will be selling for
about $350.

and that's my - highly defined transitory views - hdtv ~ RHF

I print up ILG, EiBi and PrimeTime. Between these three, I'm generally pretty satisfied. There is the occasional unidentified signal received, but that's to be expected. I tend to listen primarily through bandscanning; so frequency-sorted ILG and EiBi scheds are my primary references.

I'm not too regular in downloading the HFCC scheds.

While prominences and flares can be exciting in an esthetic sense, the reality behind those beautiful pitcures is terrifying. It is a good thing earth has a magnetic field as strong as it is today. If we were like Mars, anyone living on the surface might be fried by radiation or die of cancers caused by it. It shouldnot be taken lightly. Also, its effects on vital communications can be pretty potent as well.

Space Weather News for April 3, 2006

http://spaceweather.com

Solar activity is suddenly increasing. The biggest sunspots of the year
are
crossing the solar disk; one group is longer than 10 Earth diameters and
poses a threat for solar flares. Meanwhile, astronomers are monitoring a
large and delightfully complex prominence dancing long the sun's limb.
Whether all this will translate into magnetic storms and auroras remains
to
be seen. Please visit http://spaceweather.com for pictures and updates.

Would you like to know about solar flares the instant they erupt? Sign up

394. ATTENTION: The Bell + Howell World Band Radio

Newsgroup: rec.radio.shortwave
Date: 2006-04-03 23:16:16 UTC
From: Joe Analssandrini <analssandrinij@yahoo.com>
Message-ID: <1144106176.879550.22720@z34g2000cwc.googlegroups.com>
Source record: 69652

All right - for those of you who have procrastinated, here is the GREATEST offer for the Bell + Howell World Band Radio I have ever seen.

The company offering it is: MAKE LIFE EASIER, 19465 Brennan Avenue, Ferris, CA 92599. Their telephone number is: 1-800-522-0227.

Currently they are offering two special coupons: (1) "ZCF" which is worth $5.00 on any order of $30.00 or more, and (2) "ZCE" which offers free shipping on any order of $20.00 or more. (Their normal $3.00 handling charge still applies.) Just mention these two coupons to the operator.

Okay - now to the "meat" of this post.

"WORLD BAND RADIO"

"Tune into the world from home. And tune into home from faraway ... with this portable nine-band world receiver from Bell + Howell☐. It picks up television audio as well. Expands your listening options with FM/TV, AM/megawatt[*] and shortwave channels. A telescoping antenna brings it all in, loud and clear. The compact, durable pastic housing measures about 5" x 3" x 1"; features headphone and DC jacks plus wrist strap. Cordless operation: take it wherever you go. Runs on two AA batteries, not included."

"Nine-Band AM/FM TV/Shortwave Radio #25-78181-6"

And what's its price?
NOT $4250.00 as for the Ten-Tec RX-340,
NOT $1799.00 as for the JRC NRD-545,
NOT $1489.00 as for the AOR AR7030 Plus,
NOT $569.95 as for the ICOM IC-R75,
NOT $499.00 as for the Eton E-1,
NOT $149.95 as for the Sony ICF-SW7600GR,
NOT EVEN $50.00 or thereabouts as for several Degen offerings, but ONLY

$8.00 !!!

And if you order four of them ($32.00) you'll get $5.00 off with the coupon above (brings cost down to $27.00) PLUS free shipping with the other coupon above; adding in the $3.00 handling cost and the TOTAL delivered price for FOUR (4) BELL + HOWELL World Band Radios is ONLY $30.00! That's only $7.50 apiece!

Where else can you get such a fabulous DX machine at a price like that?

I've heard the All India Radio, Radio Australia, Radio Cairo, Radio Bulgaria, the BBC, and many, many others on mine -- how good are you and what could YOU hear with yours?**

Remember these quotes from satisfied customers:

" ... the great Bell + Howell Radio ... " -Jim Hackett***

" I am not a crook." -Richard M. Nixon

"I am the President of Iraq." -Saddam Hussein

"No new taxes." -Jim Corzine

"There's a ... born every minute" -P.T. Barnum

Don't wait - get on the 'phone RIGHT NOW before these are all gone!

Remember, they make great gifts to give to people whom you want to keep out of our hobby.

"He who waits is lost."

Best,

Joe

*How many of YOUR radios receive AM/megawatt signals?

**Maybe we should have a DX contest limited to reception via the Bell + Howell Radio only.

***With apologies.

That's insane at today's prices for energy. You can get Compact
Fluorescents for about $2 each nowadays and they use 1/5 the
electricity and last 10 times as long.

Won't be long before the east coasters will be able to hear Radio
Australia on 21740 for most of the evening. When conditions are really
good, 21740 is their best frequency for NA. Otherwise it's 9580 in the
morning.

Our local star is wonderful and stable, but being that it is basically a gigantic nuclear reactor, it's also inherently nasty. The only reason we live in peace with it is because of our thick, protective magnetic field and our ozone layer. There are massive doses of UV, x-rays and gamma rays thrown out in one major x-class flare. Even some of the smaller solar flares are larger than the entire Earth. The bigger ones are larger than many Earths strung end-to-end.

Our observatory has a telescope that is specifically designed to look at the Sun in a specific wavelength of light, known as hydrogen alpha (H-alpha). It only allows you to view in a certain small slice of light wavelength (the alpha emission line in the red end of the spectrum), but that is where all the action is. When the Sun is really active, you can see solar flares, prominences and even the boiling "granulation" that marks the photosphere* of the Sun through this scope. You can see the surface of the Sun literally change before your eyes.

Four years ago when the Sun was more active than now, I was watching gigantic loops of superheated hydrogen gas coming out of sunspots and looping back into them again. To see that kind of detail from the Earth just takes your breath away. Here's a picture pretty similar to what I saw:
http://www.space.com/scienceastronomy/solarsystem/trace_update_000926.html

Jackie

*The Sun technically has no solid surface, but what appears to us as a surface, we refer to as the photosphere.

Also the fact that it's been on continuously. Incandescent light bulbs seldom burn out while they are on, unless dropped or hit. Failures are caused by the current surge when it's turned on. However they must have had power failures during the many years the bulb has been there. I wonder how they protect it from surges when the power comes back on.

Source record: 69659

Here is what I posted last November to the Yahoo 398 group. You may want to consider joining. Lots of good tips and info...good luck

Hoping the problem was indeed the speaker and not a capacitor, I went ahead and made plans to replace the speaker.

An earlier post recommended the Regal 8 ohm, 3 watt replacement speaker. I found them available through Hosfelt Electronics in Ohio (phone 888-264-6464). It is part # 13-404. Get this...it is a 99 cent part. Great service by the way, parts arrived in 3 days. Pretty interesting assortment of stuff on their website. $5 minimum order if I recall correctly.

I followed the Rick W instructions on opening the case. In my case (no pun intended), it opened very easily - probably since I had some mod work done on the radio before.

The speaker is mounted on the inside front of the radio and is very easy to get to. There are 4 retention "tab/clamps" that hold it in place. Two tab/clamps are removeable (by screw). These should come out first. Once those are removed, then you have to cut loose rubber cement that appearently was used to help hold the speaker in and perhaps help with vibrations or something. Suggest a razor blade for that. I used a small screwdriver which wasn't very efficient. Then you can slide the speaker out from the two stationary tabs.

The Regal speaker fits perfectly under the tabs and in the "speaker hole." The magnet is much much bigger than on the stock speaker and of course heavier. There is no doubt that the build quality of this replacement speaker is superior to the stock. There is ample room for the larger magnet.

I snipped the leads to the old speaker at the speaker. I cut most of the leads of the new speaker off (left perhaps 3"). Then soldered the old and new leads. Solder the red leads together and then the white (from the board) to the black of the Regal speaker. People that know what they are doing, would put the heat shrink over the solder connection. I wound up using small pieces of electrical tape. Slide the speaker back under the two stationary tabs. Screw in the two removable tab/clamps. The speaker seemed to fit very well, so I did not see a need to do any glueing.

The case went back together very easily. Then the moment of truth. WOW...it was indeed the speaker that had gone bad. It sounds really great now. Night and day.

Now, why did I have two speakers go bad for no apparent reason. Was
it humidity related as some have suggested? That is a good theory
and perhaps I should store this radio with a dessicant going forward.

This replacement took me under a half hour to do. I am not very
electronics oriented - so that should tell you it isn't very hard.
Someone that knows what they are doing could complete this
replacement in under 10 minutes I bet.

Thanks to those who posted their experiences on earlier posts and to
Rick W for posting the radio disassembly instructions several years
ago. If I can answer any questions, I will be glad to try.

The problem is we could be much more vulnerable to the radiation from solar storms during the time period that the earth's magnetic field is reversing. No one knows for sure how long this takes. It could be months or years. There will also be a higher risk of skin cancer during the reversal period and compasses will be almost useless. Fortunately we have alternatives to the compass these days.

The filament has high resistance. The current never gets high enough
to stress it. I'm surprised it survives earthquakes.

I'll be darned. Somebody beat the previous low price. I can't recall what "Parade" magazine advertiser Carol Wright sold them for, but it was probably something like $10 or $12.

I finally had the chance to hear one last summer. I think I'll hang on to my money.

Put a turned on flouresceant light bulb by your radio and,or your computer and see what happens.

Mississippi produces more electricity than we use in this state and last year there was talk about a new nuke plant in this State.Have y'all ever heard of power outages (other than power outages caused by stormy weather) in Mississippi before? This isn't California or New York City here.

A few years ago,Duke Energy (or whatever the name of that Duke company is called?) installed a new steam electricity generating plant somewhere in the Jackson area.

I dont mind spending more money for old style light bulbs.Those are the kinds of light bulbs I grew up with and I intend to use them for as long as I can.

I don't see them being at the price point of the little sets like cuhulin is talking about.. those things are cheap. There are other portables that cost quite a lot of money, like the 7" and 10" LCD sets that cost up to a couple hundred dollars, and are fairly new technology.. lot of people are not going to be happy about having to just toss them in the trash because they're worthless..

Are you a parrot? The point is "these events" have never happened to a technological society on this planet. The last time the earth's magnetic field reversed our ancestors were living in caves. The worst that could happen back then was a bad sunburn or possibly death from skin cancer. The stakes are much higher now.

"Joe Analssandrini" <analssandrinij@yahoo.com> wrote in message
news:1144106176.879550.22720@z34g2000cwc.googlegroups.com...
All right - for those of you who have procrastinated, here is the
GREATEST offer for the Bell + Howell World Band Radio I have ever seen.

The company offering it is: MAKE LIFE EASIER, 19465 Brennan Avenue,
Ferris, CA 92599. Their telephone number is: 1-800-522-0227.

Currently they are offering two special coupons: (1) "ZCF" which is
worth $5.00 on any order of $30.00 or more, and (2) "ZCE" which offers
free shipping on any order of $20.00 or more. (Their normal $3.00
handling charge still applies.) Just mention these two coupons to the
operator.

Okay - now to the "meat" of this post.

"WORLD BAND RADIO"

"Tune into the world from home. And tune into home from faraway ...
with this portable nine-band world receiver from Bell + HowellT. It
picks up television audio as well. Expands your listening options with
FM/TV, AM/megawatt[*] and shortwave channels. A telescoping antenna
brings it all in, loud and clear. The compact, durable pastic housing
measures about 5" x 3" x 1"; features headphone and DC jacks plus wrist
strap. Cordless operation: take it wherever you go. Runs on two AA
batteries, not included."

"Nine-Band AM/FM TV/Shortwave Radio #25-78181-6"

And what's its price?
NOT $4250.00 as for the Ten-Tec RX-340,
NOT $1799.00 as for the JRC NRD-545,
NOT $1489.00 as for the AOR AR7030 Plus,
NOT $569.95 as for the ICOM IC-R75,
NOT $499.00 as for the Eton E-1,
NOT $149.95 as for the Sony ICF-SW7600GR,
NOT EVEN $50.00 or thereabouts as for several Degen offerings, but ONLY

$8.00 !!!

And if you order four of them ($32.00) you'll get $5.00 off with the
coupon above (brings cost down to $27.00) PLUS free shipping with the
other coupon above; adding in the $3.00 handling cost and the TOTAL
delivered price for FOUR (4) BELL + HOWELL World Band Radios is ONLY

$30.00! That's only $7.50 apiece!

Where else can you get such a fabulous DX machine at a price like that?

I've heard the All India Radio, Radio Australia, Radio Cairo, Radio Bulgaria, the BBC, and many, many others on mine -- how good are you and what could YOU hear with yours?**

Remember these quotes from satisfied customers:

" ... the great Bell + Howell Radio ... " -Jim Hackett***

" I am not a crook." -Richard M. Nixon

"I am the President of Iraq." -Saddam Hussein

"No new taxes." -Jim Corzine

"There's a ... born every minute" -P.T. Barnum

Don't wait - get on the 'phone RIGHT NOW before these are all gone!

Remember, they make great gifts to give to people whom you want to keep out of our hobby.

"He who waits is lost."

Best,

Joe

*How many of YOUR radios receive AM/megawatt signals?

**Maybe we should have a DX contest limited to reception via the Bell + Howell Radio only.

***With apologies.

412. Re: What if... The Roman Empire had short wave...

Newsgroup: rec.radio.shortwave

I have long thought that if the Roman Republic had had (what we now call) absentee balloting then it might well have lasted a lot longer (and not have become the Roman Empire). As it was, a citizen had to be in Rome to vote. If shortwave radio had existed, votes out in the provinces could have been quickly tallied together. Such a scheme could have held off the centralization of power that morphed into the Empire.

It's a matter of taste. And it was a lot more than just kidding around;
for some of those people it was important enough to carry the 'badgering'
into real life.

Okay, it's been some years since I've thought about
this, but are you talking about the wavelength
of Hydrogen when it's luminescent, as if you were
looking in a spectrometer?

(Boy, Dr. O'Hare would have me flayed for forgetting
this stuff.)

There are several hundred million TV sets in the US. I can't see people
being too happy about having to throw out everything from little
portable sets like Cuhulin's to big 27 inch TVs just because the govt
ordered stations to switch to digital broadcasts. Furthermore, digital
TV equipment is expensive, buying a monitor and converter box can run
you back at least $1000 if you buy from a discount mart or Costco AND
buy the smallest and cheapest versions. If you want true HD you'll plunk

down at least $5000. That's a lot of money. I can't see people being too happy about that, either. If there's one thing Americans care about, it's TV, and forcing people to buy sets that cost many thousands of dollars in order to get any TV at all is sure to make a lot of people mad, although it is certain to be very profitable for the big corporations pushing HDTV on us. We could go back to the 50s where TV is concerned and each house will have ONE very expensive set and Dad and/or Mom get to choose what to watch. A side effect could be a resurgence of radio. Will people start to listen to shortwave radio again for the simple reason that SW is cheap?

426. BBC transmitter problems on 15,390

My hat's off to you Joe! Very funny. But it ONLY tunes in the world?

"Joe Analssandrini" <analssandrinij@yahoo.com> wrote in message
news:1144106176.879550.22720@z34g2000cwc.googlegroups.com...
All right - for those of you who have procrastinated, here is the
GREATEST offer for the Bell + Howell World Band Radio I have ever seen.

The company offering it is: MAKE LIFE EASIER, 19465 Brennan Avenue,
Ferris, CA 92599. Their telephone number is: 1-800-522-0227.

Currently they are offering two special coupons: (1) "ZCF" which is
worth $5.00 on any order of $30.00 or more, and (2) "ZCE" which offers
free shipping on any order of $20.00 or more. (Their normal $3.00
handling charge still applies.) Just mention these two coupons to the
operator.

Okay - now to the "meat" of this post.

"WORLD BAND RADIO"

"Tune into the world from home. And tune into home from faraway ...
with this portable nine-band world receiver from Bell + HowellT. It
picks up television audio as well. Expands your listening options with
FM/TV, AM/megawatt[*] and shortwave channels. A telescoping antenna
brings it all in, loud and clear. The compact, durable pastic housing
measures about 5" x 3" x 1"; features headphone and DC jacks plus wrist
strap. Cordless operation: take it wherever you go. Runs on two AA
batteries, not included."

"Nine-Band AM/FM TV/Shortwave Radio #25-78181-6"

And what's its price?
NOT $4250.00 as for the Ten-Tec RX-340,
NOT $1799.00 as for the JRC NRD-545,
NOT $1489.00 as for the AOR AR7030 Plus,
NOT $569.95 as for the ICOM IC-R75,
NOT $499.00 as for the Eton E-1,
NOT $149.95 as for the Sony ICF-SW7600GR,
NOT EVEN $50.00 or thereabouts as for several Degen offerings, but ONLY

$8.00 !!!

And if you order four of them ($32.00) you'll get $5.00 off with the
coupon above (brings cost down to $27.00) PLUS free shipping with the
other coupon above; adding in the $3.00 handling cost and the TOTAL
delivered price for FOUR (4) BELL + HOWELL World Band Radios is ONLY

$30.00! That's only $7.50 apiece!

Where else can you get such a fabulous DX machine at a price like that?

I've heard the All India Radio, Radio Australia, Radio Cairo, Radio Bulgaria, the BBC, and many, many others on mine -- how good are you and what could YOU hear with yours?**

Remember these quotes from satisfied customers:

" ... the great Bell + Howell Radio ... " -Jim Hackett***

" I am not a crook." -Richard M. Nixon

"I am the President of Iraq." -Saddam Hussein

"No new taxes." -Jim Corzine

"There's a ... born every minute" -P.T. Barnum

Don't wait - get on the 'phone RIGHT NOW before these are all gone!

Remember, they make great gifts to give to people whom you want to keep out of our hobby.

"He who waits is lost."

Best,

Joe

*How many of YOUR radios receive AM/megawatt signals?

**Maybe we should have a DX contest limited to reception via the Bell + Howell Radio only.

***With apologies.

430. Looking for Yacht Boy 300 Manual, or how to adjust AM freq spacing

Newsgroup: rec.radio.shortwave
Date: 2006-04-04 06:33:12 UTC
From: Father Guido <FG@SNL.com>
Message-ID: <bd44329111qtc2pqvio7qq75kfurubts0u@4ax.com>
Source record: 69689

I recently received a Yacht Boy 300PE, but it didn't come with a manual, so I'm a bit lost. It seems to be set up for 9 KHz AM spacing. I did try entering 960 (entry - 960 - entry), but it went to 954 instead, 963 picks up interference when I'm trying to listen to 960, 954 is even worse.

If anyone knows how to change it to 10KHz I'd appreciate it very much. Better yet, if anyone knows where I could download a manual I could even use more of it's features.

Thanks in advance!

Norm

Source record: 69688
Cross-posted to: aus.radio.amateur.misc,aus.radio.cb,aus.radio.scanner,rec.radio.shortwave

1. I don't eat McChucks or any takeaway, haven't for a couple of years.

2. I drink Bulleit Burboun and Bulleit only, or Cartlon Draught, Jack Daniels. Besides, I never drink in my car or when I have the car, how fuckin' stupid to drive a car when the pubs just over 1km away. I do something you probably can't, I put one foot in front of the other and keep bloody going. (I wish you'd do the same, off a cliff!)

3. Yep, the website and info was so crap that I was paid a rather large sum of money to sell it to someone else in a private sale. That website will buy me my IC7000 and my IC7400, so I ain't care what you think kev.

4. Real SLR torana's have no back seats, you bloody idiot! (They were never installed)

5. As for Kev and his ilk, you'd do well to visit the State Library or National Library of Australia where copies of "The Geelan Globe" (later "VicNews") is held. It's my magazine, with lot's of frequencies etc that I used to publish in Grade 6 (1990), Year 7 (1991) and Year 8(1992). It was registered with the Congress & Australian Library, assigned an ISSN of 1038-6971 and this was produced, Kev, many, many years before I, schools or the government, or anyone else had the internet, you dickhead.

6. When you walk 36km most nights to get home (from Whittlesea to Kinglake), then bitch at me, otherwise get stuffed. I'm betting that those on here bitching at me are probably fat, overwieght lazy slobs who can hardly walk to their own letterbox, that's why the spend so much time on the internet. (a la Homer Simpson)

7. I don't waste time on a website, I sold it long ago, moron.

8. I still get at least one call everyday from someone wanting to know something from the website, inlcuding government agencies, and sub-ordinate authorities, (if you know what that means) do you?

So instead of relying on a computer and Google to do your research I suggest a visit to the State or National Library where you will find copies of said magazine circa 1989 on the shelves, or don't you know what an ISSN or how to use the DEWEY DECIMAL system, Kev? Look it up on the library's catalogue "VicNews" or "1038-6971" and what do you find?

Probaly too hard for you to do any research the old fashioned, reliable way.

I'd post you an old copy Kev, to prove I'm right, but I wouldn't waste 45cents on a stamp for you, if you send me a SASE and I'll give ya a

copy, otherwise, GET STUFFED!

Or how about the list of police frequencies, I provided to Police Life (the VKC in-house magazine) as a year 7 student. Check out July 1991's Police Life, again before computers. So this bullshit about copying others webpages is bullshit. I was producing frequency lists, newsletters and newspapers with radio info many years before the internet existed, or usenet, so I somehow stole this info before it even existed on the web? See I'm that fuckin' smart I can steal web pages when the web doesn't yet exist, now how clever is that!

All the fire frequency info I had was published, again many years before the web, in Eltham CFA's "909 News" newsletter, again, before the web existed, find an Eltham CFA member and ask them for the Fire Services Frequency Brochure I produced in 1994.

At the end of the day, that website filled my bank account nicely, so whatver you say I ain't give a shit, loser.

Wondering how many thousands you've made from your website(s)?

So, whatever I said with my scanning website filled my bank account, nicely.

Anyway, enough crapping on with morons, I should have learnt my lesson long ago..

Don't argue with fools (Kev and his ilk) as people might not know the difference.

Kev you are the Home Hardware Tool of The Year.

Simon removed the links, because I had the balls to meet him face to face and explain what was really going on at the time. At first, I'm sure he had some doubts, but once equipment started to be purchased with his callsign as well, everything fell into place and Simon removed the links, realising it wasn't me bringing pirates, or helping them, get gear for ham bands, but rather others playing games.

Be warned, I have proven to many people that a group of CB'ers in Melbourne scan the ham bands, pluck some callsigns, and then buy gear with it, pretending to be that person. They then come on as pirates and say "callsign x helped me get it" which is a load of b/s. It's not just me this has happened to. You could be next, and if they do pick one of you lot that's been giving it to me for years I'm going to go to town on you and have a field day with it, not to mention the fact that I'll treat you the same way you treated me.

"Dozo swate kutesi" to Kev and his ilk.

"Konichiwa, rocku son" to everyone else.

Ashley VK3HAG

PS. My friends aren't on UHF CB either, they sit on CH 18 HF CB AM,
where the Greensborough guys have chatted since we were in high school,
not UHF CB as you lot seem to think.

One of the problems with cheap labor is it prevents the creation of machinery to do the job. That is, you could have a Hewlett Packard lettuce picking machine. Replace a million people doing stoop labor under the table with maybe ten thousand people designing and maintaining the hardware.

I'd like to know who picks the grapes in France. Migrant workers in a socialist country???

But wait, if you call today you can receive the radios with only $1.99
down and be billed monthly for the remaing amount,

That's a good idea to have some type of DX contest where the only radio
allowed is the B&H, any antenna OK, Dude get it started.....

France is a mostly agrarian economy. The people growing wine grapes have
been growing, harvesting and selling them for generations for the most part.
Our economy has in the past been largely industrial, but is now moving to
largely service industries, the industry having mostly been outsourced.
Agrarian economies, as ours was in the early history of the US, tend to have
strong work ethics, despite the system of government.

Actually, this has been "tested" over and over. At some point, every programmer is tempted to "take the opposite path" in mornings by doing a totally music bassed format. After we try it once, we do not make the same mistake twice. Depending on the format, a degree of talk is required. An AC might require just news and traffic in brief (what we call "service elements") while a CHR requires a team show with a lot of goofiness between the songs.

There are literally no cases where "shutting up and playing the songs" works better in mornings. Generally, that approadch works far worse. And my evidence of this is looking at hundreds and hundreds of staitions over the last 30 years.

> I stopped listening to
> commercial radio in the mornings when the
> signal to noise ratio plummeted to where
> if I was lucky, I'd get a song once every
> 15 minutes. If that.

You are the exception. Or the staiton you liked may hve overdone its attempt to be entertaining. Or both.

For example, the #1 show in the morning in LA, the US' largest media market, has, at best, one song an hour. The rest of the day it is music based.

> smacks of Walmart-ism and the sort of things that
> Standard Oil used to do. Legal? Probably. Ethical?
> No.

I was not speaking of a third party. Pre-consolidation and after it, it has been illegal for a broadcaster to have any relationship with stations they do not own or legally lease (LMA).. Such "transfer of positive control" whithout FCC permission would result in loss of license. Nobody is going to do that.

However, if you refer to a group of commonly owned stations using one of them to flank or counter a competitor, this is no different than one car company coming out with a convertible because the competitive company has done the same thing, and giving better price or more accessories to swing buyers. This is no different than a supermarket selling milk at a loss (very common) to get people in the store, knowing they will buy other things, too.

Using assets to one's own advantage is hardly lacking in ethics.
>>
>> If a station tanks in Arbitron, and stays tanked, it changes format.
>
> Unless the owner can afford the losses, or decides
> to move toward a public radio or community radio
> oriented format.

Very few owners can take losses on radio staitons. They run out of money, and sell. Or they change format.

There are very few cases of commercial stations becomming non-commercial, and these tend to be cases where large, well financed public broadcasters buy commercial stations to improve reach, not where an existing commercial broadcaster has gone non-commercial. In fact, I can not think of one cae of that having happened.

> The beauty of a WAIF is that the
> members run the station; everyone who contributes

> money to the station has to sign up to do some
> work at the station.

WAIF is a non-commercial station, on the non-commercial part of the band. It can not be commercial, ever, without buying a station form 92.1 upwards and moving.

Non-commercial stations, which have a different income and financial model, depend on contriutions and grants. Commercial stations depend on advertising. In this context, it is neither fair nor relevaant to compare them.

> do.

I have been working with one talent for nearly 12 years to get him to drop a regional accent. It is not easy. One thing is for an actor to learn an accent for a script... but radio hosts and jocks improvise, and get emotional. The real accent comes through.
>>
>> We are talking about radio. What you describe is far less prevalent
> in radio
>> as radio staitons can not centralize.
>
> They centralize as much as they can.

Any company, whatever the business, will centralize what it can for efficiency. Usually, this is stuff like accouts payable, etc. A local radio station has to have local sales, management, traffic, production, engineering, collections, etc. Programming may or may not be local (the original model of radio is non-local, remember) depending on where the best programming comes from.

Outside of the largest markets, almost all radio sales is local. That requires local staff and management. There is no way to sell the local Ford dealer by phone.

> rewarded with a hit down the line.

TV shows are not developed by stations.

TV shows are developed, mostly, by production houses. They are sold to networks, which run them. If the ratings do not produce revenues, they are cancelled. Because audience measurement is instantaneous, the responses are faster than they were 40 years. ago. All of this is "dictated" by advertisers, not by the individual stations involved.

> The less
> patience shown with media by the bosses,
> the less likely it will be to build audiences with
> anything other than the instant hit.

Part of the reason for lower patience is the change in TV. In the 60's, there were 3 networks and essentially no independent competitin outside of a few indies in the top few markets. Now, every market has hundreds of channels via cable. The networks are a small part of this, compared with the past. So they have to create hits instantly or lose to cable alternatives. The increase in options is paid for with a decrease in risk taking.
>
> I also don't think that it's an accident that when
> this volatility began to increase, the prevalance
> of the Morning jock yapping began to increase
> as well.

There is no relationship between TV and radio jock talking. Radio is not measured by the same standard or method as TV. Advertisers do not compare the media, and buy them separately. Radio's content is determined by what goes on in each local market: the competitve array, the availble dollars based on market revenue, coverage, etc. TV has nothing to do with it.

>
> The DJ is the face of radio to the listener, not the
> ad man or the station manager or the best boy.

Listeners, on the average... and I mean 99% of them... look at a station as a utility. They like it or do not. It has the right mix of music and jocks, or talks about the right subjects, or it does not. Jocks are not the face of the station, unless you refer to morning high profile talent or talk hosts. Otherwise, the talent is the "glue" that makes the station all come together for the target listeners. But, in music radio, it is the songs that make or break the station.

I don't own a HD TV or a converter and I don't intend to buy one anytime soon. But I'll still watch my TV. I have two VCRs and a DVD player. Tapes and DVDs are quite cheap. I got a couple of double sided DVD versions of the 50s Dragnet shows for a buck a piece. I figured I couldn't go wrong at that price. Well, those old shows were better than I expected. And there's tons of that stuff out there. Very cheap, yet good, entertainment. I think we'll be seeing even more of it soon.

>Furthermore, digital

I doubt the converter boxes will be anything like that expensive. But, given my interest in broadcast TV, even $20.00 is too much.

> We could go back to the 50s where TV is
> concerned and each house will have ONE very expensive set and Dad and/or

>

I doubt people will start listening to radio more even if they end up watching less broadcast TV. As I mentioned, tapes and DVDs are a cheap alternative. And copying such media is cheap and easy and will get cheaper and easier yet. So, I think it's more likely that the cheap media racks will get even more popular and bootlegging will become almost socially accecptable.

I wish I owned all of my favorite old movies on tape and DVDs.I wouldn't need to spend a bunch of money each month subscribing to satellite tv service.But I like to watch local news and weather on tv.If I give up subscribing to satellite tv,I guess I would wind up buying a converter box.

If so, it won't be because the Prophet is moronic. He's doing what the
experts say can't be done. Brother Stair is making money off of skywave!

But it's concievable that Brother Stair could be carried on an IBOC
transmitter, if WSAI goes IBOC and IBOC is allowed at night.

Surely, if the Devil's Modulation can handle that, it can handle anything!

I have an iPod and I adore it and the whole iTunes/iPod system. But honestly, this doesn't excite me. I'm stunned that I have to work the DX to get a BBC signal in North America. Radio Australia, Radio Havana Cuba, and the Voice of Russia seem to be the only big boys left with more than a 1/2 hour of English in the US. Oh, and Radio China Internaional.

Sad.

Not sure where you are, but 5975 comes in without extending the antenna
on a portable.

The internet, cable and local FM re-broadcasts are more reliable if
less challenging (and interesting) ways to listen to international
programs.

Try 15400 (West/Central Africa) that starts at 16:00 (but doesn't
come in until later) until 23:00. It ranges from crummy to adequate
here in Seattle.

Godaddy registrations are $9 a year.
http://www.godaddy.com/gdshop/default.asp
A one year contract gets you a web server for $5 a month:
http://www.lizardhill.com/services/

So we're talking about $6 a month. That is less than an hour at minimum wage.

Serious question: is there really that little interest in SW in North America to justify every station shutting down their English operations in the Americas? I mean, Larry Magne seems to get enough money from sales of PWBR to live comfortably, and Ebay sellers of cheap Chinese SW radios (like Liypn) seem to do a brisk business. Is it possible that the only people listening to SW in the US and Canada are a handful of gray haired hobbyists who have been around since the 60s? That's what everybody seems to think, but there are some troubling indications that people are buying SW radios only to find nothing on in English because all of the major stations have shut down, after which they throw the "worthless" radio in the garage or sell it in a garage sale.

Don't be so sure. Look what happened to the price of DVD players. They started at $500+ and now you can buy one with more features for less than $50. Same thing happened to VCR's.

There are really several good indicators that interest in receiving information via shortwave is way down. There are very few manufacturers and sellers of shortwave radios any more because fewer people are demanding them. Look at the advertisements in PBWR - they are all from one company. Broadcasters that traditionally used shortwave are converting rapidly to alternative methods of getting information out.

I think that it is clear that the listening and viewing audience has an ongoing interest in receiving information about the world around them. Because they are interested content and ease of use transmission modes like Ipod, broadband, satellite, cable, etc., are becoming the preferred method of gathering that information. There is declining interest in putting up with the vagaries of propogation and atmospheric noise when reliable and more flexible options are available.

I copied this from the BBC website:

Why has BBC World Service reduced its short wave provision?

Short wave listening around the world is declining.
The downward trend is accelerating: the global short wave audience for BBC World Service has dropped from 122 million in 1996 to 97 million in 2003.
Like other international broadcasters, BBC World Service has been adjusting its short wave provisions in line with global demand changes.

Alternative ways to listen
At the same time BBC World Service has been investing in new delivery methods, all with the improved audibility now preferred by audiences, such as FM, cable, satellite and online.

BBC World Service is committed to making the best use of the money it receives from the government and has had considerable success in attracting audiences to these new methods of delivery; more than 50 million are using these and the numbers are growing fast. Separately, online usage has grown from three million page impressions every month in late 1998 to almost 300 million by 2004, which is equivalent to 18 million unique users.

Alongside in-depth news and information, programmes are available streamed both live and on demand at the convenience of the listener.

There are now more ways to listen to BBC World Service broadcasts than ever before.

Eton is not a radio company in the sense that I knew the big companies to be. From National to Kenwood to Yaesu to Panasonic you could count on parts and manuals to be available for some period of time. Eton impresses me as a company whose focus is that of a marketer and distributor of radios, with little interest in providing long term support for older products. And given the price of most of their new radios it is hard to argue too much. They are for the most part complex radios to be thrown away when something breaks.

The problem with this is other people control what and when you get to hear the BBC. This can be for financial, political or other reasons.

Short wave is the way nations have gotten their propaganda and agenda out to the world. If you don't define yourself then other people get to do it for you. It is not going to work to have to rely on another countries infrastructure to get the message across. This thinking is short sighted.

It's a good performing inexpensive radio that provides quite a range of features for the money. It isn't perfect, but overall is pretty darned good. The only real negative is the memory setup. While not a replacement for the Sony and Sangean products it does deliver good performance.

That is at least theoretically the problem with any source of
information. Those that control the purse strings could in theory
influence the information being distributed. That source could be BBC,
VOA, NPR, NBC, etc. But I don't entirely understand your point.

>
> Short wave is the way nations have gotten their propaganda and agenda

By definition the infrastructure of any country is subject to the
control of that country. Whether the infrastructure is a shortwave
tower, FM station, fiber optic lines, IP servicer, radio receiver,
television is irrelevent. Each of those operate or are available
within a country and are subject to the political and legal controls of
that country.

I'm not sure of the point you are making.

That sounds like a couple episodes of the original Star trek :) What if they had had gunpowder and artillery ? The opening scene of "Gladiator" is reminiscent of a modern day artillery barrage. Germany would have been a different place. And if they had captured more territory and enslaved the population, they might well have conquered asia. The possibilities are intriquing. If the Third Reich had been able to use the resources of their conqured territories to advantage, Russia might be very different today as well.

I have long thought that if the Roman Republic had had (what we now call) absentee balloting then it might well have lasted a lot longer (and not have become the Roman Empire). As it was, a citizen had to be in Rome to vote. If shortwave radio had existed, votes out in the provinces could have been quickly tallied together. Such a scheme could have held off the centralization of power that morphed into the Empire.

Actually, it's about shaving off some of the bandwidth for subscription
(sub)channels.

>BTW There are HD sets for under $1,000.

And if you realize that 480i Composite is HDTV-speak for NTSC, you could
get by with just a $250 set top box to go to the TV/VCR AV inputs or
a modulator.

Maybe even cheaper if somebody in your area (Walmart?) is selling
subsidized receivers for a terrestrial subscription channel. (If it'll
work without the subscription).

~Norm

Thanks to the people who replied, their is indeed a small
switch to choose 9 KHz or 10 KHz under the batteries. There
is also a reset button under there too, which seemed to
require pushing after changing the frequency spacing.

Thanks again!!!

Norm

The first step is to change the law in regards to citizenship. Just because an illegal alien gives birth on U.S. soil should not automatically make their offspring a U.S. citizen. I believe that is what the law is in Europe and many other countries.

SED,

Even Canada changed their Laws to correct
this mistake in Illegal Immirgrant Birth Status.

The USA needs to get the Laws in order to reflect
the very 'limited rights' of Illegal Immirgrants
1 - Arrested for Being in the USA Illegal.
2 - Deported for Being in the USA Illegal.
3 - Banded from the USA for Being in the USA Illegal.
= = = The USA a Nation of Legal Immigrates [.]

Mexico for Mexicans -and- America for Americans [.]
* If 'you' Immigrate to Mexico Learn Spanish and
Become a Mexican Citizen and Obey Their Laws.
* If 'you' Immigrate to The USA Learn English and
Become an American Citizen and Obey Our Laws.

yes - it is that simple ~ RHF

Oh, boy. I can buy a three-way-power portable TV for $15, and for the cost of just 67 of them I can have a nonportable TV that's useless because I'm 40 miles from the antenna sites. I bet you're going to tell me next that for the cost of 70 to 200 portables I can get something that will record some of the shows on HD (if I move to a downtown location to get reception). Maybe for the cost of 240 portables, I could put up a 100 foot tower and array of 16 log periodics to get an occasional flash of picture, too.

We'll get HD when all the cable systems and all the dish systems go out of business, and the price of a full-featured HDTV is under $150. I'm not holding my breath. It's not important enough.

I think what he's trying to say is that FM rebroadcasting, the internet, satellites, etc all rely on a "middleman media" if you can call it that-a secondary rebroadcaster. Shortwave signals go directly from the transmitter to the receiving radio, using the ionosphere to propagate. A satellite broadcast relies on a secondary media-in this case, the satellite-that is controlled or controllable by a third party, unlike the ionosphere. An FM rebroadcast relies on a satellite (to get the signal to the FM transmitter) and an FM transmitter on foreign soil, owned by a third party who can control whether or not to carry BBCWS. In many cities a change in the ownership of one FM transmitter to an owner who is not interested in carrying BBCWS programming could cut off access in that area to BBCWS programming for a significant length of time, until the BBC finds another FM station. The internet relies on a whole network of data transmission lines, servers, and intermediary rebroadcasters to get the BBCWS from Bush House to your computer. Any disruption or overload at any point along this LONG chain and BBC access can be cut off. Any service that relies on a middleman media is subject to disruption or abrupt change in the controllers. Satellite access can be denied or cut off, it happens all the time. The internet is subsceptible to hackers, overloads, downed servers, and so on. The much touted routability of the internet only goes so far. FM rebroadcasting is at the mercy of BOTH satellite owners and FM tx owners. Yes, there are alternatives to SW that have much better fidelity and technical reliability. But the alternatives also have big downsides that nobody seems to acknowledge, largely because significant problems have so far been absent. But you can only roll the dice for so many times before getting snake eyes, and the BBC is playing a risky game by cutting off SW.

Every car failed around 200,000 miles. But only failed when it was started. Therefore starting is the only reason why cars fail. HFguy uses same logic to 'prove' power cycling damages incandescent bulbs. He hopes you will believe sound byte reasoning rather than read many paragraphs of reality.

As taught in Junior High School science, first we learn underlying principles before we can obtain a fact. Observation alone even proved spontaneous reproduction.

There is no major shock to incandescent bulbs during power on. As well documented in so many light bulb industry publications, light bulbs are damaged by hours of operation - and as David so accurately noted - excessive voltage. Unlike HFguy, the industry even provides numbers for what causes light bulb failure. HFguy provides no numbers because he is promoting subjective speculation as facts.

For example, a voltage increase causes a decrease in bulb life expectancy exponentially to a power of 13. Raising the 120 volts to 127 volts will cause a light bulb to fail twice as fast. These are industry numbers found in the same publications that list what causes light bulb failure. Power cycling is not listed in what causes incandescent bulb failure - in publications that use science rather than personal speculation.

Once a light bulb filament is severely damaged (by hours of operation or excessive voltage), then even a so gentle power on may cause filament failure. Look at any light bulb that failed during power on. Before it failed - whether during power on or in constant operation - black residue from the filament is already apparent inside the glass. The filament is down to its last ten hour - like the car with over 200,000 miles. Hours of operation cause a filament to vaporize; those black deposits.

HFguy makes claims by violating what was taught back in Junior High school. Without first learning underlying principles of how a light bulb fails, instead, he has proclaimed based only upon observation and wild speculation. He ignores junior high school science to promote

speculation as if it were fact. Such reasoning also proved Saddam had weapons of mass destruction.

Incandescent bulb life expectancy is determined by hours of operation and electrical voltage. Exponentially increase light bulb life expectancy by minor voltage reductions.

If HFguy is so confident of his proclaimations, then he can cite an incandescent light bulb manufacturer publication. He cannot. He speculations are classic junk science - not found where reality is published.

Get a good $10.00 tv rabbit ears antenna at a Wal Mart store and connect it to the UHF on your analog tv.Chances are you can pick up some free over the air HDTV on your analog tv set. www.gizmodo.com Click on where it says NEXT at gizmodo.com and scroll down to the article,HDTV for Free with Spectrum LP49-DTV Antenna.
You might need to click on NEXT twice.

I own a Terk TV 50 amplified (I think it is amplified) antenna that is seven feet long and it has a wall wart and a long coaxial cable in the middle,near one end of the cable is a slide switch for Off On,to TV to Antenna and it says on the label Amplification Gain + 11 db switchable.VHF 54 MHz to 216 MHz UHF 470 MHz to 216 MHz There is a slide switch thingy for turning it on and off.Designed and Engineered in the U.S.A.China 1997.Terk Technologies.

I dont know what all that tech data means,it is all Greek to me.I bought the antenna for $5.00 at a Godwill store.I dont know if it still works,I haven't tried it out yet.If it works,I wonder how it would do for picking up some free over the air HDTV on my 1999 RCA 27 inch screen analog tv set?

I read an article a few weeks ago stating that the FCC told cable systems
they were not allowed to downconvert any of the over the air stations. I'm
not sure what this means exactly, but it sounds to me like they won't be
able to make them NTSC compatible.

Hello all,
am thinking of buying a FRG7 and would be interested in
hearing others thoughts on this receiver.

John

Heat kills computers too.Subject a computer to the temperture of outer Space and that computer will run for many,many years.

Those light bulb dimmers and those little round other kind of dimmer thingys (about the diameter of a penny) for lowering the voltage to light bulbs so they will last longer,I have never used them before,but I think they are dangerous,seems to me I once read about them catching fire and burning some houses down.I have an old voltage meter here that plugs in a wall outlet,I am going to find it and plug it in and leave it plugged in for a few weeks.

I think I will start (for a few months) writing down the date and time when I install new 60 watt G.E.Reveal light bulbs (it's my money,I will spend it the way I want to spend it,I just dont like those stinking flourescent light bulbs and those stinking led bulbs/lights.I dont care how much electricity they save.Let New York City and California have them brown outs and power outages,it's good for them) in my house and when they blow out.It only stands to reason that the more the juice the more the overload and the more things will burn out.I have known that for over fifty years,I wasen't born yesterday.

My guess is that the govt (and the big corporations who buy access to it) is trying to do exactly what I said they were trying to do: force everybody to buy $5,000 TV sets. People can't afford health care, they can't afford rent, they can't afford gas, they can barely afford food, and now the govt is saying to them "Replace all your $200 TV sets with sets that cost at least five times as much"? People will tell the govt to go fuck itself. Even with recordable DVD technology and massive bootlegging of recorded TV shows, there will be a LOT of people who just decide to go without TV. Where will they turn? Radio is a logical choice. Most of those will turn to AM and FM, but SW will have a place especially among news junkies. I think that the average feature programming of BBC or DW or RN is too cerebral for the average American, but the news coverage is superb. And after enough instances of "net congestion...buffering" on the internet, people will be looking to over the air radio. Few FM operators are going to want to carry a lot of BBCWS programming, especially outside the biggest cities. They can get a better profit off NPR or domestic talk radio. I'm not sure where

satellite radio services like Sirius and XM fit into the picture, but I suspect that after being asked to buy $5,000 TV sets, and after paying through the nose for cable for 20 years before that, people will be looking critically upon pay to receive radio.

522. Shortwave radio vs satellite radio: my perspective

Newsgroup: rec.radio.shortwave

I don't listen to shortwave radio for hours at a stretch. At best, I'll listen to a half hour of news on the BBC, and RHC's 10 minute news bulletin-per night. I don't listen to much music. Now tell me again, David, why I should pay $13/mo for something I'll only use for 2 1/2 hours per week (BBC doesn't have current events coverage on weekends)? That's about 80 cents an hour. Pricey. I doubt that most people listen to any more than one or two of satellite radio's dozens of channels. When Howard Stern moved to Sirius, only about a third of his over the air fan base moved with him, leading Stern to berate his former fans as cheap. Satellite radio isn't worth the cost for all but the most dedicated users. Considering that most people watch 6 hours of TV a day, cable TV is cheap. But most people don't listen to the radio for hours on end.

Hi John,

I just bought one about three weeks ago for $225US. I like it, especially since I upgraded my antenna to a EWE (Google that for more info, if interested). Some people complain about it being kind of tricky to operate, but it's not hard to use at all. It's not a high-end receiver but it is a pleasure to play with. I don't know why that other respondent said anything about repairs, as it has got a good reputation for reliability, and I certainly have older radios that work great too, like my fifty-year-old Hammarlund.

For the money, I think it's a good deal. You won't be disappointed, provided the radio you get is in decent shape.

It is sensitive, has decent selectivity for AM broadcasts, and has very good sounding audio. And with a good antenna, the S/N ratio can be outstanding.

Have a good day,
Alan

Harumph. Well, glad the wife (who does 99% of the TV watching) is
mostly interested in HGTV and Food Network. We might buy a set-top
box once they can be had free with the government coupon.

Figures the FCC would be properly bought and paid for to ensure
high sales of the new products.

There are a lot of people in America who simply just can not afford to buy a new HDTV tv set even if they sell for about $100.00 or less,three years from now.I can envision there will be one H..l of an Uproar from them.Most people want their TV and that is that! I hope when and if the time comes,,, there will be millions and millions and millions of people from all over America marching on d.c.and I would be tempted to join them too.I HATE HDTV!!!

The Yaesu FRG-7 is one of my favorite old receivers. It is the last of the analog receivers. The early models lack a fine-tune control where this was corrected in the later models. The battery compartment was an option but this is available on some websites today. The audio has a good quality and the radio is fun and easy to operate. No digital readout is necessary. It has been rated five (5) stars on many websites. Some opinions might vary for this old straight-forward receiver but if you can find one today in good condition with the fine tune control... then it's a keeper. Value is about 150-200 bucks.

Roger

Yes, that is exactly what I was trying to say. Thanks for posting this.

People tend to think the Internet is wide open but look at the Chinese
censorship going on along with all the problems that you mentioned.

The ionosphere refracts everyones signal impartially unlike the third
party media routes whether it is satellite, FM or the Internet.

And even better, the new products are 10 times (at least) more expensive
than the old ones! Guaranteed mega profits! Providing, of course, that
people rush out to buy a new several thousand dollar HD set once the
govt cuts off their old TVs. People could just do without. Or they'll
riot in the streets, and those profits could be eaten up by the costs of
deploying millions of riot police in order to restore calm. Here in
California, a lot of over the air TV is low power transmitters
rebroadcasting Mexican TV networks. You've already seen half a million
Mexicans in the streets of LA. Now imagine them REALLY mad. And then
they'll be joined by millions of poor whites and blacks who have nothing
to live for and who don't give a fuck if they're shot. Wouldn't it be
funny if the US govt's existence was severely threatened by riots over
TV? Iraq, epidemic corruption, who cares? But take away our TV and boy
are you in trouble. lol

And then we wonder why Americans are so stupid. TV is the great moronizer. If you actually thought about what you're watching, you couldn't stand it, so you turn your brain off and just stare blankly at the screen. Most people watch TV intently yet can't tell you what they just saw. Eventually the brain can't be turned back on again, and people go through their lives with a glassy stare.

You described me in the 1980 time frame. "there will be a LOT of people who just decide to go without TV. Where will they turn? Radio is a logical choice. Most of those will turn to AM and FM, but SW will have a place especially among news junkies." I got back into short wave radio and tossed the TV. AMBCB talk radio came around and I started listening to that too. I would not describe myself as typical though.

TV is a waste of time. You want real world news it's short wave. The Internet is usually good but you still have to deal with the news services slant instead of reportage in the country of origin.

Consider the Realistic DX-302 too. It uses a tuning system similar to the FRG-7 with the added feature of a digital frequency display. The '302' could use some mod's to improve it's performance but it's an acceptable receiver in original form. The DX-300 was an earlier version that turned out to be a 'lemon'. Don't consider that model. A good '302' goes for about $100 on Ebay.

Sailors are very superstitious, at least the ones who have been at sea
for any length of time are. If I was an old hand at sea and they asked
me to captain a ship made out of WTC steel, I'd sure pause and think
about it. RHF should understand that this is not a "desire" so much as
reality. You just don't fuck around with the dead.

Interesting. Mine doesn't have the reset button -- and doesn't need it.
Switched the switch, put the batteries back in, and it was on the
other step size.

Some Aircraft parts such as metal and plastic and other parts/materials are recycled back into new Aircraft.Some of those parts might have came from some Aircraft that had crashed and somebody died.

Same situation with Automobile parts too.We all might be driving some vehicles that might have some ''dead bodies'' in them.In Japan,they have big hot furnaces thingys,they dump the old vehicles in there and they control the temperture of the furnaces at different heat stages to melt out/extract the different metals and plastics and other materials.It all gets recycled back into new vehicles or other new things.It's Soylent Green,baby,it's Soylent Green.

From the 'Great Internet Light Bulb Book':

-WHY BULBS OFTEN BURN OUT WHEN YOU TURN THEM ON-

Many people wonder what goes on when you turn on a light. It is often annoying that a weak, aging light bulb will not burn out until the next time you turn it on.
The answer here is with those thin spots in the filament. Since they have less mass than the less-evaporated parts of the filament, they heat up more quickly.
Part of the problem is the fact that tungsten, like most metals, has less resistance when it is cool and more resistance when it is hot. This explains the current surge that light bulbs draw when they are first turned on.
When the thin spots have reached the temperature that they would be running at, the thicker, heavier parts of the filament have not yet reached their final temperature. This means that the filament's resistance is still a bit low and excessive current is still flowing. This causes the thinner parts of the filament to get even hotter while the rest of the filament is still warming up. This means that the thin spots, which run too hot anyway, get even hotter when the thicker parts of the filament have not yet fully warmed up. This is why weak, aging bulbs can't survive being turned on.

Yes, I'm well aware that there may be some repair/improvements to be done.

They were a very highly rated radio when new, and more than one radio dealer sold enhancements. And the radio still has a very loyal following. Unless you really want the very manual somewhat fiddly tuning the FRG7 uses, I would go for a receiver with full digital tuning and multiple filters. A used Kenwood R-5000 can be had for a reasonable price and it will have many many more useful features.

Yeah, please explain it to our resident troll who claims to read the Wall Street Journal yet still doesn't seem to understand even basic economics or business.

Seems he can't even do a Google either.

It isn't a question of the dollars it costs to maintain a website listing of manuals or not. It is a question of what want to do with the business. And if they are focused on selling the latest crop of radios with little thought to what those radios replaced, then they are doing what many other producers of consumer electronics are doing.

How is their tech support line anyway. Are they able to field questions about older Grundig radios?

That's not what it says. It says the MSOs can't put an analog
converted signal on their systems for people with Cable Ready TVs.
Everybody will need a set-top box. Not a new TV.

Where'd the ''thin spot'' come from?

From the wire overheating and vaporizing the filament.

The higher the Watt rating the lower the internal resistance.

Anybody who watches 6 hours of TV a days is a Zombie.

I listen to Newshour and the World Today, plus a lot of the 6 minutes
newscasts on the BBC. An hour of R. Netherlands at 9PM. R. Australia
at Midnight (if I'm up). All in very nice static-free sound.

I live in the Mountains. There is no reliable FM here. People in big
cities have similar problems sometimes. Multipath, interference,
pledge drives, etc.

If I buy one less CD a month due to the wide variety of music on
satellite I'm ahead financially, aren't I?

567. Re: Shortwave radio vs satellite radio: my perspective

Stern was misquoted by everyone on calling the fans that didn't move to Sirius cheap. The original interview he stated (laughingly) that he was insane and no matter how many fans singed up he'd not be happy because he is a perfectionist. When asked what he thought of fans who didn't make the trip to Sirius he again, laughing, said, "they are cheap".

Everyone that picked the story up left out the part where he berated himself and was joking about calling anyone cheap. Now, the story with bad reporting has been repeated so many times it is being taken for the truth.

Just standing up for what was said. He didn't berate anyone in any seriousness.

You don't really need shortwave radio or satellite, either, for BBC.
It's on most NPR radio stations daily, several times throughout the
day and/or night.

I started using DSL about a month ago. No perceptible increase in RFI was heard on my Ten-Tec RX320. The principal offender in my shack remains the CRT computer monitor.

Which brings me to a question. Sometimes, the CRT causes a real racket. At others, none. Unless the amount of emitted RFI varies greatly, do local atmospherics amplify or attenuate it?

Every mode used to transmit information has it's share of hazards that could prevent the signal from getting through. For shortwave they include: Mother nature sending forth sunspots, atmospheric noise or a thunderstorm to wipe out reception; A shortwave relay or rebroadcast station going down; Political problems preventing transmission or reception; etc.

But the real question is why broadcasters and listeners are turning away from shortwave radio and more toward cable, satellite radio, Ipod and the internet for information. For broadcasters they have to decide whether to allocate scarce dollars to support a medium with declining usage (shortwave), or whether to spend that money on media that promises to deliver an audience with growing numbers. For listeners it is a choice between a medium that can be difficult to receive, is noisy and doesn't sound very good or several media that offer noise free reception, a wide range of choices for listening times and programs nd

a lot of flexibility. Clearly the numbers are pointing away from shortwave and toward the newer technoligies for receiving informatoin about the world around us.

It's important to remember that broadcasters really obtain no benefit from a small audience that waits only for the station signal at the top of the hour and collects QSL cards. It is also important to remember that most listeners to not enjoy the challenge of hearing a distant program with narrow audio quality through static crashes and fading signals. Indeed they will turn away to easier and more reliable ways of listening given the chance. And they are doing so in droves.

As I recall on a CRT there can be some harmonic rich square waves and
overshoot in the deflection coils caused by high contrast borders in
the displayed image. I suggest you switch to a nice LCD. Your eyes
will thank you.

Yes, but consider this from the advertiser's perspective. They will finally
be able to winnow us independent-minded, sales-resistant free-thinking
freeloaders from their TV audience. They will have found the perfect
customers -- those people who are willing to be lead by the nose. Better
yet, those customers will have paid for their own nose rings!

The amount of RFI can vary greatly. The harmonics from the sweep circuits will change with the resolution. The RFI from the video will change with the picture information.

Source record: 69781

Hi...

Here is an actual *shortwave* post!

I don't know why I didn't try r.r.s before....

I have owned a Yaesu FRG-7700 for over 21 years now....it seems that either nobody will fix it cheap, or maybe they think it is ready to give up the ghost....

Anyway....I was told by a guy in WI that it needs a BFO or VFO encoder....the problem is that I am unable to tune with the knob, without "skipping" frequencies. I have to go back & forth until I can zero in on them. It just won't go to the frequncy I want it to go to.

This is really rough if I wanna hear SSB.

Can anybody recommend a place to get this repaired without (1) a hassle, (2) a hefty fee? I live in south Florida. The Yahoo FRG-7700 group was no help....sad to say.

sincerely
Christopher Dunne

Hey

I was told that ZDK in Antigua on AM was off for good. I was in the USVI in July 2004, and not a peep out of AM 1100.

Anybody know when this happened, and the circumstances around it? I have seen on internet about ZDK occasionally not paying bills, and maybe the AM cost too much. I know it's on FM.

Any time you put 2 or more frequencies into a non-linear stage the sum
and difference of the 2 frequencies are also seen at the output, along
with sum and differences of multiples of the funamentals and the
intermod products.

Not always a bad thing. Your superheterodyne receiver mixer stage
uses the priciple to produce the IF. This is where the harmful IM
products can be produced as well, but good receiver design minimizes
their damage.

For over-the-air he government generally doesn't regulate them except in the broader sense of specifying the maximum amount of energy that a station may transmit outside of its channel and ''good operating practice''. There are specific IM distortion rules regarding cable transmission.

There used to be a G.E.factory here in Jackson that manufactured incadescant and flourescent light bulbs.When my old buddy got out of active duty (U.S.Navy) back in the mid 1960's,he worked there for a couple of years,then he got a job delivering the U.S.Mail.(he retired from the U.S.Navy Reserves unit here in Jackson [about 30 years or so] and the U.S.Post Office too)

I dont believe G.E.makes crappy light bulbs.I own quite a few old G.E.tube type and transistor radios and most of them work ok.I will keep on buying and useing G.E.Reveal 60 watt incadescant light bulbs as long as the stores keep on selling them.By the way,I noticed they sell very well at the local Jackson stores around here,even though there are tons of flourescent light bulbs sitting next to the G.E.light bulbs on the shelves.(in Jackson,we like REAL Light Bulbs)

The only time I'd be concerned with resale value is if I bought a high-end tabletop receiver.

The DE1103 will work great for your intended purposes. It's a good performer, it's cheap, and it's the perfect size for traveling. I still think it's the best deal going in the realm of portable SW receivers that are less than $100. The only thing I dislike about this radio is the funky volume-control thing, but I got used to it pretty quickly.

if you want to use several receivers with one antenna, then this is what you need. four outputs from one input with 2-4db of gain, not a LOSS. works from .5 to 50 Hhz. uses 150ma at 12V
I am selling this with several cables for $35 plus shipping.

612. FRG-7

Newsgroup: rec.radio.shortwave

Source record: 69920

myself and several of my experienced SWL/DXer friends all think the stock FRG-7 is a joke. we have about 90 years of experience between the 3 of us. add digital readout and an excellent filter and you start to have something, but for less than $300 a used Satellit 800 runs circles around it.

I have an FRG-7 with digital readout and a collins filter and it is resonably nice. take away the extras and it is a fustrating simplistic receiver after you have used a real receiver like an R8 or a satellit 800.

613. the best buy in a communications receiver right now

if you look at the price of a satellit 800 on ebay right now you will see
that they are an incredible deal, there really are no other choices at
$200-$300
many have sold at or BELOW $300, a real steal of a deal. it is still my main
receiver from my collection of over 100 receivers. best combination of
features and performance for the MONEY.
only the Lowe HF-225 is used when the ultimate in sound is required with its
attached 3 way altec lansing speaker system.

I'll tell you what I do. I watch ABC World News Tonight on TV. US govt line, mostly. Then I listen to Radio Havana. Hard line anti-America slant, sometimes reports stuff I can't find anywhere else, interesting viewpoint. Then I listen to BBCWS The World Today, conditions permitting. European viewpoint, more centrist (although gradually becoming liberal). I synthesize all three, and voila, a view of the world that takes most perspectives into account. I'd add a conservative news source, but I find that most conservative news sources are in fact empty yapping (talk radio) or internet blogs (the internet version of talk radio). A blogger or a talk radio host can say whatever he wants, because such sources are at heart entertainment, not news, and make no pretensions to be anything else. You can say that every news source is propaganda and conflate everything into one big pile of mush where reporting from the BBC is equal to Buzzflash. I'm not willing to go to that level of nihilism. Keep an open mind, but be careful that it doesn't fall out and splatter everywhere and make a mess.

I tuned to 6000 khz at 0500 UTC on 06 April 2006. Radio Havana Cuba's signal was coming in decently here in northern California. I'm using a Kaito 1102 with just the whip antenna and a random wire for grounding.

The SIO code started at 444, but over the next 15 minutes, it dropped to 242. I'm curious if anyone else was listening tonight. I was optimistic after some recent wins with RHC reception, but this is abysmal and I can't figure out what's different on the receiving end. Also, 6060 khz and 9550 khz are silent.

I have two intereference sources in my shack - the CRT's and the 4 port hub.

The CRT intereference occurs on harmonics of the line frequency and if one appears on a wanted signal, I go into Properties, Settings, Advanced and shift the monitor to a new frequency.

The LAN into my hub is 100ft long and radiates a variety of noises and the 100MHz hub is much worse than the 10MHz hub, so my only workaround here is to swap hubs if the occasion demands. The DSL is not a cause of any noises, just the stuff distributing it!

Brad.

But a digital display makes accurate readings so much easier. The display on a $50.00 Degen DE1103 is far easier to read accurately than the FRG7. The FRG7 was a nice radio when new, and if you are into knob twisting it is still fun to play with. So is a Kenwood R300. In fact those old analog receivers really serve as reminders of how far technology has advanced in the past 30 years.

ok. so the newer electronics work fine. BFD.
one stray EMP from a close lighting hit and you are again looking for
another radio.

personally, I'd rather have a radio I *CAN* work, not something with menus
that is inaccessible to the blind (and an frg-7 fits the bill nicely).

Hell, I grew up using an old Halicrafters sx model sw receiver. I wish I had
kept it now. those things still sounded smoother than most modern
electronic sets.

Actually, it depends on the NPR affiliate station as to what, if any, BBC WS programs are carried. WETA, a local NPR station in my listening area, incorporates large chunks of BBC WS programming into their weekday schedule: NewsHour from 9:00-10:00 am; the horrible World Have Your Say program from 1:00-2:00 pm; and continuous overnight WS programming from 10:00 pm to 6:00 am. Oh, and WETA does work in The World, as well, from 9:00 pm to 10:00 pm. On the other extreme, another NPR affiliate that I once listened to, WABE, to my knowledge carries no BBC WS programming.

Time? Frequency? Any English language programs?

About 15 years ago, I had an insomia session and the 5 MHz band was quiet enough to pick up most/all of their 5 MHz regionals, lined up just like the page in Passport. I gather those transmitters are off the air now.

I've not noticed anything from there since then, except for the Chinese Mongolian language programs on 6195 which battle it out with the BBC every morning.

(I'm largely a program listener, with a table full of timers and cassette tape recorders to pick up the stuff that comes in when I'm asleep).

Actually, it's PRI affiliates. You can go to go www.pri.org, take the
toolbar link for "Programs" then select "BBC World Service" in the
popup menu, and that takes you to a page where you can download a
pdf file schedule poster.

And then you can really get pissed off, because the PRI feed only has one
half hour a day (that my local station doesn't carry) for a selection of
programs from the three blocks (half hour each) that the full schedule
has for science, culture, and documentary programs, each weekday.

Source record: 69970

Dear Mike,

I always thought the Grundig Satellit 800 was a "steal" at its list price ($499.00) when it was NEW. There was, and still is, nothing in its price class that offered its combination of performance - both in sound and reception quality, flexibility, and ease of use. Only its quality of construction was somewhat lacking. That said, after almost six years (and two trips to Drake - one "major," one "minor"), it still soldiers on, used every day. Connected to a Wellbrook ALA 330S (mounted in my attic atop a Radio Shack rotator) it offers about 95% of the performance of my AOR AR7030 Plus (though, of course, it's that last 5% that really counts when the going is tough).

At $200 - $300, it is almost a "no-brainer" to buy. Even if there is something wrong with the radio (what do some of these eBay sellers DO to their equipment anyway?), and as long as the defect(s) is/are minor, Drake can put the radio in like-new condition for very little (relatively-speaking) money.

There's still no SW radio offering its capabilities at anywhere near its price.

I do not think that these prices will last long. In a relatively short time, especially if there are no other comparable radios offered (let's hold our breath for the Degen DE-1108), I believe the price of the Satellit 800 will go up, possibly way up.

As always, just my opinion.

Best,

Joe

I bought my Degen 1103 from ebay at about $45 brand new, shipped from China in about a week (!), and I got the export version (everything in English) of the unit. I like it very much: more that my past two YB400PE which may have better performance, but are less versatile in operation. It is all I needed from a mini portable and I just love it !!

I recommend the following ebay seller (who sells the export version): Tao Qu, ebay id : tquchina . I bought it from him and everything was perfect! I highly recommend him.

Cheers,

Nic.

I just wish Chuck Harder would retire from talk radio. He's a very, very sick guy. Anyone who's been listening to him since Katrina knows this.
If there are any doctors out there who listen to him, please contact him and convince him to do the right thing and hang up his microphone. That isn't too much to ask, is it?
Whatever happened to human compassion? Isn't there anyone out there who can take Chuck's place?
Ed Shiflett and Vic Ives, how about it?

BBC is NOT on "MOST" NPR member stations. It is on some of them, and on
most of those, it is available (run by the station) only as an overnight
service, a fairly cheap filler as it were. As such, it's a valuable
service. But to some, it would be a really valuable service if, for
example, the BBC World Service hourly news were aired every hour of the day.

I was not able to try out the E10 and E100 but the plastic of the case was a little unusual in the touch and feel department. Felt a little rubbery and slightly sticky instead of smooth. This would definitely help holding on to the unit and is a good idea. I was not able to try them out though because neither had batteries in them. The buttons on the E10 and E100 had good tactile feel to them.

The S350 had batteries in it and I though it worked pretty good. It was early afternoon and I was in the back of the store where the unit was picking up several stations in the 9 and 11 MHz bands so the sensitivity must be good. The unit had good sound also. I played with the controls and found it could vary the sound quality to a significant degree so I would expect most people could get the unit to sound the way they like it.

I found two negatives on this unit. The tuning was touchy and it was not easy to get the display to read to the kilohertz I wanted to tune it too. The slow tuning gear needs to be slower for me to be happy with it. The other negative is it drifted in short amount of time.

I just played with the unit for a few minutes and basically liked it. I understand it is single conversion and night time listening with many strong signals on the 6 MHz band might not be great.

There is an updated version the S350 Deluxe that has "AM/SW frequency lock" but I can't find an updated manual that describes it. The Deluxe version costs the same and I remember reading the drifting was decreased.

I bought two ccrane Sangean radios about nine something years ago.The first one was the one those two Idiots and Morons and Stupid Imbeciles Art Bell and George Noory tout so much,(seeee,,, they get paid for toutin the S..t they pedal) that can't keep its front panel AM/FM/TV/Weather radio that really has Lousey sound/audio quality too.I played with it for a week and I sent that cheap over rated and over priced piece of S..t back to Fortuna,California.(no disrespect to the good citizens and denizens of Fortuna,California)

Yerra,and then I bought a Sangean ATS 909 (or whatever they call it?) AM/FM/Shortwave radio from ccrane and I played with it for a week too.y'all guessed it,back to Fortuna that piece of S..t! ,it went too!

LQQK,I tried em out,I didn't like em atall.
I Say Bob Crane should reimburse me for the shipping charges I wasted on sending them two Playkool radios back to Fortuna.

I have had my 350 for over a year, and overall, I like the radio. It has
some drawbacks, the ones you metion, but after using it awhile, I got used
to them. I like the size, the speaker size and the big handle when I take it
out doors. I like the looks to. The tone controls are great, and mine is a
sensitive receiver. It has some drift, but not much to really complain
about. The AM (MW) is pretty good too. Of course, there is no SSB operation.
But, for a hundred bucks, I dont expect anything more than a 100 dollar
radio, so, I am satisfied with it. It gets a lot of use and is not hard on

batteries.

In Feb, I was in Radio Shack, and they had a sale on the Eton E-10, so I bought it, not really expecting too much, but I do enjoy collecting portables. In short, I love it. Again, there is no SSB operation, but, other than that, it's a great little piece. The finish, the feel and the display are highpoints. The sound is good too. Lots of features, the filters work very well, and it's sensitive and selective off the whip. The E-10 has something I always liked, an Antenna tuner knob, and it works pretty well. It has fast and slow tuning, timers, clocks and 550 memories if one would use memories a lot.

I was going on vacation, so I bought Kaito 1103 to take with me to compare the E-10 with. I had a lot of fun playing with the 2 new portables. Both, for the price are really good portable receivers. The E-10, in my opinion has the edge, but the 1103 does have sideband, and it's quick to clarify.

I had a chance to try some different antenna options with some reels, some longer wires and such, and did not overload either receiver. If you are considering a new portable and you dont want sideband, the E-10 is a very cool little unit. It came with the batteries, the recharger, the case, and a reel antenna.

> travelling and camping.

The last thing you want to do while travelling or camping is trying to figure out how to manipulate the radio - i.e. memory access, volume control, a useless LCD display that takes up almost 50% of the face of the radio.

My rule for good radio ergonomics is - after initially studying the radio can the controls be easily and accurately controlled while blindfolded? Consider this the next time you are curled up in your sleeping bag.

Of course most people don't buy a product considering its resale value. But that is not the point. The point is if you are deciding to purchase a product for keeps why compromise on poor ergonomics and memory access? You will kick yourself every time you turn it on. Then you WILL want to sell it! In the 1103's case you will either give it away or throw it against the wall on your way to buying another more user friendly product which you should have purchased in the first place.
Ref: $130 Sony ICF-SW7600GR - it comes with a Sync Detector which is not available in any other new portable at any price. It's resale value is not $zero because it is a desirable product. ALL of its controls can easily be manipulated blindfolded. Including its memories. Its performance it its price class is second to none. Especially when teamed with a highly desirable AN-LP1 antenna.

Hey, its your travel/camping time and money. It's only a hobby.

Source record: 69805

Category Error

Making the problem unsolvable through your inability • or fear • of defining it correctly.
...
•In philosophy and formal logic, and it has its equivalents in science and business management, Category Error is the term for having stated or defined a problem so poorly that it becomes impossible to solve that problem, through dialectic or any other means.•
...
•The war between Athens and its allies and Sparta and its allies • a war for nothing less than hegemony over the entire known world at that time • began in 431 B.C. After seventeen years of almost constant fighting, with no clear or permanent advantage for either side, Athens • under the leadership of Alcibiades at the time • decided to widen the war by conquering Sicily, the •Great Greece• they called it, an area full of colonies and the key to maritime commerce at the time the way the Strait of Hormuz in the Persian Gulf is today.•
...
Athens failed in Syracuse • and doomed their democracy • not because they fought in the wrong place and at the wrong time, but because they weren•t ruthless enough. They had grown soft since their slaughter of every combat-age man and boy on the island of Melos, the enslavement of every woman and girl there. The democratic Athenians, in regards to Syracuse, thought that once engaged they could win without absolute commitment to winning, claim victory without being as ruthless and merciless as their Spartan and Syracusan enemies. The Athenians, once defeat loomed, turned against their own generals and political leaders • and their official soothsayers. If General Nicias or Demosthenes had survived their captivity and returned home, the people who sent them off with parades and strewn flower petals in their path would have ripped them limb from limb. They blamed their own leaders like a sun-maddened dog.
...
A must read http://www.dansimmons.com/news/message.htm

The end will not come because an over-powering enemy has arisen - no to our everlasting shame, the end will come because Western governments, in a display of incredible cowardice and treason, have abandoned and delivered their disarmed individual citizens to a mob of stone-age savages.

Well, the issue may not be "drwing and quartering" and maybe not even
Gannon.

It would seem that the gummint, in this day of supposed tight security,
owes the American people an explanation of why a male prostitute
pretending to be a reporter had *free access* to the White House. No
reasonable explanation of this rather queer security breach has been
forthcoming so far...

The FRG-7 was an attempt to reconcile the limitations of analog technology with the increasing demand from users for a precise radio. Analog tuning is by its nature imprecise; you never can be sure EXACTLY where you are. With AM and FM stations, which announce their frequency regularly, that's fine. But SW stations don't, and even in the late 70s most of them were not in English, so you couldn't understand the freq announcements even if they did bother. In the days before digital users had to construct elaborate charting systems themselves to figure out the exact frequency, and even the transmitters drifted, so you could never be sure that you were going to find a station in the same place twice. The demand for accuracy in tuning brought about the FRG-7. Yaesu did its best, but they could only do so much. And when digital tuning came along, it was so obviously superior to analog that the 7 became obsolete overnight, and remains so.

Not really. We have the biggest debtors in the world. They only LOOK rich. They use 20 credit cards to fake a rich lifestyle, but having tens of thousands of dollars in debt and all the lastest toys does not make you a rich moron, just a rich LOOKING moron. The rest live off daddy's money.

That's kind of cold. As is the sound of PLL synthesised receivers.
You can make AM sound better some times by slightly tuning off to one
side. There's a certain magic that's lost...

The E10 is a good looking unit but I'm not actually in the market for another portable. I was in the store to pick up a few parts for a project. I didn't want to pester the clerks when I wan not actually going to buy one.

I did like what I saw and would consider an E10 or S350 if I was in the market for a portable unit. Good sounding audio out of that S350 and it was sensitive or it would not have picked anything up in the back of the store.

There is a S350 Deluxe version with AM/SW frequency lock. I could not find a manual for the Deluxe version that describes this feature that sounds like it would eliminate drift. I would like to know how this feature is suppose to work.

I was looking at the ad in the new Monitoring Times about the S350 Deluxe. This is what it says about the improvements over the older 350. "FM Stereo over headphones". "AM/SW Frequency Lock." "Set clock & timer while radio plays." "Operates on 4 D cells or 4 double A cells."
The one in the ad has the Eton name and is in red. But, the tuning knob on the DL in the picture is silver, and opposed to the black knob on the Grundig S350. It's fifty bucks more than the S350. I don't think I will buy one, unless I do one day just on a whim or something.

KSTX is a National Public Radio station, and carries their
programming, in addition to the BBC. Joan Kroc, the McDonald's
hamburger widow, donated $234 million to NPR a couple of years ago,
and much of the money went into news staffing, and they have good news
and features programming.

That pretty much describes every non-professional (and many professional) communication receiver up until the late 70's, when digital frequency display (and then PLL synthesis) started showing up.

There are some very, very good receivers that reconcile analog tuning in different ways but at a completely different (factor of ten) price point. The FRG-7's approach was a fine one at the time for the price point for a general coverage receiver.

I PERSONALLY feel that someone (like the OP) who complains about the lack of digital freq display on a stock FRG-7 probably is either too young to know how to interpolate a frequency off a tuning dial, or he is some wiseacre who likes to make up complaints about 30 year old technology. The FRG-7 tuning is great for AM reception, and pretty good (although not as good as the best analog-tuned ham receivers of the 70's) for SSB and CW.

The OP's complaint about "simplistic" PROBABLY means that he doesn't think a receiver is good unless it has 8-bazillion pushbuttons on the front that you have to hit in precise combination to receive a station.

Tim.

As I recall Collins had some fairly decent designs in the early '50s
with digital frequency readout.

Also, the Racal R-17 series, while not digital, were capable of
resolving within a couple hundred Hertz (cycles per second?) in a
reliably repeatable fashion.

The nicest thing about the old analog stuff was that it was hard to
automate and therefore humans were required to operate them.

The analog turn counter + geartrain + precisely linearized PTO on a 390A are a joy.

Similar but different are the very long slide rules on for example a Cosmophone. (Probably not surprising... Cosmos made many of the 390A PTO's!)

By the 70's most of the ham transceivers and receivers had better-than-decent dial tuning and calibration (and Yaesu and other japanese competitors made it affordable too. Nothing against Ten-Tec, either, who did it with a PTO and plastic parts.) But those were not general-coverage receivers, they were "one crystal per band" receivers. And most were sold without good filters for AM (but with pretty good filters for SSB).

Tim.

The FRG-7 is a very good benchmark against which to measure how far
receiver technology has advanced in the past 30 years. The crop of
consumer shortwave receivers produced post 1982 led the way with now
commonplace features like: accurate numeric displays down to 10hz,
virtual drift free performance, keypad, knob and memory tuning,
multiple selectable filters, passband tuning, synch detection, etc.

I'm old enough to have fond memories of using a slide rule to solve
math problems, but digital calculators and spreadsheets are clearly
more efficient and accurate tools for performing all manner of math and
statistical problems quickly. The analogy applies to analog receivers
and their modern digital display PLL counterparts.

The longest lasting receiver is a National 100ASD that I inherited from
my father. He began using it new in 1947 as a recently licensed ham.
It was overhauled several times in it's long life.

The next longest lasting receiver is a Kenwood R-5000 that I acquired
new in 1987 with a full complement of filters, serial interface and DC
adapter. No overhaul to date, although the keys do need a bit of a
workout after it has set for a month to settle down the key bounce.

Yeahbut: most of those "features" have little to do with how well you find and receive the signal.

PBT and synch detection do help in many circumstances, but analog-tuned receivers have had these features as well.

Good sharp filters of the right bandwidth have little to do with the FRG-7's competition back in the 70's. The FRG-7's factory filter is a better-than-average middle-of-the-road choice in that price band. It is pretty sucky compared to a really top-notch mech+crystal filter combo. But no consumer radios of today offer a top-notch mech+crystal filter combo either.

IMHO: Gizmos with little actual utility in finding and hearing signals. Are useful if you insist on pulling a portable out of your luggage and punching in a frequency though.

I am still very much frustrated by PLL synth tuners. I want to turn the knob and sweep through the band looking for something. Not turn the knob and chuff-chuff my way through the band. Yeah, the chuffing is down in many recent implementations but it's still pretty sucky. If you like a bunch of buttons for selecting your tuning step, hey, that's great for you.

Tim.

The Yaesu FRG-7. Heh. Thats been my shack general coverage receiver for 5 years now. The frequency always drifts on it for the first hour or so I have it turned on - but it never really stays on freq. I can't wait to get something better. I'm thinking about a Kenwood R5000 and looking around at others.

- Matt

Finding a specific frequency is decidedly easier with a digital
display.

Memory tuning allows favorite stations (mil freqs or hurricane stations
for instance) to be called up and scrolled through for activity. Try
scanning a list of specific frequencies ranging from 3mhz to 21mhz with
any speed on an FRG-7, Kenwood R-300 National HRO500, etc.

Multiple selectable filters are clearly an advance, and if they can be
programmed to a specific mode then operation is simplified.

>
> PBT and synch detection do help in many circumstances, but analog-tuned
> receivers have had these features as well.

Very few, and certainly not the FRG-7. The Kenwood R-300, Sony 5900
(love that radio) and may others used crystal markers to permit
reasonably accurate if slow tuning, but nothing close to what can be
accomplished with a cheap digital like the DE1103. Heck the
middle-aged Yaesu FRG-8800 is a big advance over the FRG-7.

>
> Good sharp filters of the right bandwidth have little to do with the
> FRG-7's competition back in the 70's.

But the point is that the FRG-7 was a good receiver back then - nobody
disputes that. Time and technology have marched on and there are many
modern receivers that are far easier to use, are more flexible and will
outperform the FRG-7.

> The FRG-7's factory filter is a
> better-than-average middle-of-the-road choice in that price band.

It is one filter that is a compromise between listening and a narrow
AM/SSB filter and nothing more.

> It is
> pretty sucky compared to a really top-notch mech+crystal filter combo.

Even the slow reacting military and spy guys who park on a few
frequencies for days have figured out that the analog era is far
behind. As have most hams and swls.

>

I've not noticed any chuffing at all in my almost 20 year old Kenwood
R-5000. You will get chuffing too on an analog receiver as you pop
past stations. Not a big deal even on the entry level digital
receivers where it is noticable.

Actually I like being able to reliably tune to within 10 hz and nail a
signal quickly.

> --
> Telamon
> Ventura, California

I'm not in the market for a SW portable, either. I have an S350 since the radio was first released some years back. It's a purchase that, given the choice, I probably wouldn't make knowing the radio as I do now. Even knowing that drift is less on it now, I doubt I'd be swayed toward purchasing it. That said, I can understand why it has appeal to folks: good audio, no synthesizer chuffing, good sensitivity and great on batteries. I'm not one of those folks who is down on the S350; it's just that I prefer the performance of some of the Panasonics I have on hand (RF-2900 & 2600).

As for the E10, well, at full retail price, I'd likely not opt for this radio either, when for $20 more there's the E5 which seems to be a more solid performer. When I first saw the E10, I was intrigued by the IF button on the front, so I read up on it. The conclusion I came to is that if the radio has such a problem with images that it necessitates a button to switch the IF from 455 to 450 kHz from time to time, it seems like one would be better off getting a higher quality portable without such image issues to begin with.

The E5 looks nice and from what I've heard about it, it's a decent performer. But there you're in the same price range as the Sony ICF-SW7600GR. And the E5, while incorporating 2 bandwidth filters, has no sync detector. So between the two, I'd opt for the Sony, were I a buyer in the market for a shortwave portable in that price range.

The K7RA Solar Update

SEATTLE, WA, Apr 7, 2006--I think you'll agree the general trend is down. An average daily sunspot number of 18.1 for the first quarter of the year easily compares to the minimum between cycles 22 and 23. From the fourth quarter of 1995 to the second quarter of 1997, the average daily sunspot numbers for each quarter were 21.3, 13.1, 13, 12.4, 14.2, 11.3 and 25.4. Our recent quarterly average of 18.1 fits right in toward the bottom of the last cycle.

For the near term, expect sunspot numbers and solar flux to decline gradually. For April 7-13, US Air Force Space Weather Operations predict a planetary A index of 10, 8, 20, 15, 12, 7 and 5. For the same period it shows a decline of solar flux values from 100 to 80. Geophysical Institute Prague predicts quiet to unsettled conditions on April 7, quiet conditions on April 8, unsettled conditions on April 9, active conditions on April 10, unsettled to active conditions on April 11, unsettled on April 12, and quiet to unsettled on April 13. So Prague believes the peak in geomagnetic instability should occur around April 10, while the US Air Force predicts April 9.

Michael Shelly, WB2KKI, of Pocono Summit, Pennsylvania asks about MUF charts. These used to appear in QST, and they showed the predicted change in Maximum Usable Frequency over a variety of paths--for instance, West Coast USA to Japan--for a typical 24-hour period based on the month, and the predicted smoothed sunspot number for the period.

These charts have moved to the ARRL Web site. The page includes a link to QST articles by Jerry Hall, K1TD, on how to use this tool.

We get mail asking us for more useful information about predicted propagation. For instance,
when is a good time to work Europe and on what band? This is a good general question, but the
readers of this report live all over the world, so it is difficult to generalize. It is even difficult to
make good general statements if we just limit our area of interest to North America. What is true
for the southern part of the East Coast may not be true for the north, the Midwest or either end
of the West Coast.

But given data from public sources, you can get some good general custom projections of
propagation from your location to most other locations on just about any HF

band. Here's how.

First, get some propagation prediction software. A great one is ACE-HF Pro. If you want free
software, one we've mentioned a lot in the past is W6ELprop. This program works with either
solar flux or sunspot numbers, but your best bet is probably to use the average sunspot number
for the past few days, rather than the latest number. These are available at the Space
Environment Center (SEC) Web site. The latest available data are through April 6.

If I were doing one now, I'd take the average by adding 100, 99 and 99, and dividing by 3, which
gives us 99.3. If you want to enter the K index into the program, you can get the mid-latitude
values from WWV, either off the air at 18 minutes after the hour or via the SEC Web site, which
also provides recent geomagnetic activity.

We depend on the National Oceanic and Atmospheric Administration's Space Environment
Center for our main source of data. The SEC jointly operates the Space Weather Operations
Center with the US Air Force and serves as the national and world warning center for
disturbances that can affect people and equipment on Earth and in space. Funding for these
services in the administration's 2007 budget had been expected to stay at current levels, but it
now appears that severe cuts may be on the horizon. I've posted some information about this on
the Web.

For more information concerning propagation and an explanation of the numbers used in this
bulletin see the ARRL Technical Information Service Propagation page. An archive of past
bulletins is on the ARRL Web site.

Sunspot numbers for March 30 through April 5 were 35, 39, 39, 68, 79, 62 and 88, with a mean
of 58.6. The 10.7 cm flux was 83.9, 86.3, 87, 91.1, 100.4, 99.5, and 99, with a mean of 92.5.
Estimated planetary A indices were 4, 4, 2, 1, 1, 7 and 29, with a mean of 6.9. Estimated
mid-latitude A indices were 2, 2, 1, 1, 1, 4 and 18, with a mean of 4.1.

IF you understand what you are buying, the C Crane radios are tops. I have the original CCRadio and love it. It, without a doubt, beats every other radio I've had experience with as far as dx reception on the MW (AM) band. If you are looking for a good portable for MW distant reception and don't want the hassle of hooking up an external antenna, I have found nothing that beats or even equals the CCRadio. It beats the GE Superadio III easily. As far as sound, the CCRadio is tailored for speech, not music.

The new MiniCCRadio should be out later this year. I understand it will have features so that you can select music or speech for the sound, and still have bass and treble controls, PLUS I also understand it will have two bandwidths to eliminate adjacent station interference. It will also have many other useful features. I have already pre-ordered one and am looking forward to trying it out.

IF you can tolerate an analog portable with no digital display, and are looking only for MW and FM reception, nothing beats the GE Superadio as far as sound and price goes. It's a real bargain, especially at Amazon.com's price. The CCRadio is pricey, but a step or two above the GE.

Dear "Slow Code,"

You wrote:

< That C Crane radios are probably sh***y. Anybody here ever buy one?
>

Yes, I did. I bought it for my wife so she could listen to TV audio when she was outside gardening and I thought I would also be able to use it for MW DXing.

Well, she uses it for TV audio, but I don't use it at all. It's very poorly constructed and we've found that often, if you use one of the "memory" buttons, the alarm will be set even when you don't want it to be. And, unless you look carefully, you won't see this. Plus the memory buttons as such don't work particularly well. (We've set the alarm to sound at 9:00 AM so it will no longer wake us unnecessarily!)

Our CC Radio is about three years old and we have not had the problem (yet) of the LCD display malfunctioning, but the radio is a big disappointment to me. I was hoping for a "digital" radio equivalent of the GE Superadio for MW but this is not it. (For MW DXing outdoors, the Sony ICF-SW7600GR runs rings around the CC Radio and the GE Superadios [versions I, II, and III] also.)

As for the sound quality on FM, well, to be charitable, it leaves something to be desired.

Sangean's construction quality makes the Grundig Satellit 800's look good.

I have had three Sangean radios over the years: this one, the CC Radio, an ATS-808A which "bit the dust" after only three years (it is now resident in our local landfill), and an ATS-606AP in which the computer is starting to "go." (I have packed that one up in its box and put it in the basement.)

Three strikes and out. I will not buy nor will I recommend anyone buying any Sangean radio.

I will say that the C. Crane Company itself is a fine company with which to deal. It's too bad that they allow Sangean to put their name on some of Sangean's radios. This detracts from C. Crane's good name and that's a shame.

Best,

Joe

Source record: 69863

Dear DeWayne,

I have not seen the Eton E1, not being interested in it for the following reasons:

1) PASSPORT claims its sound quality is okay but not great. (Of course I cannot confirm this.) The Satellit 800's sound is, as you know, very, very good. When you're trying to ID a weak transmission or you're listening to a program for an hour or more, you want the best sound quality possible. That's where my AOR AR7030 Plus REALLY shines - it has the best sound quality of any shortwave receiver I have ever heard and the Grundig Satellit is a close second. Think about that: the Satellit was priced, even new, one-third to one-fourth the price of an AR7030 yet it offers about 95% of its performance and sound quality. AND the Satellit is portable!

2) It has only one external antenna connection, not three as on the Satellit 800.

3) It has no Air Band (I have found this to be very useful) and I have absolutely no interest in any "pay" radio service.

4) A fairly large "portable" radio with no handle? This makes no sense.

5) No internal ferrite antenna for MW and this is, in fact, due to a lot of digital "hash" generated within the receiver. This is poor design, in my opinion.

Overall, PASSPORT and every other review I have read are very positive about the E1 but the limitations mentioned above preclude me from considering it. The Grundig Satellit 800 has NONE of the above problems and is STILL the only radio of which I'm aware that can be used as a tabletop (with virtually all of the advantages of same) and as a portable (with all of the advantages portables offer except the ability to take it on an airplane).

And at its current offered (eBay) price of $200-300 (and even considering that you may have to send it off to Drake for perhaps another $100) it is the best buy in shortwave radio right now.

I realize that most of you will disagree with me (and with Mike) but that's my opinion!

Best,

Joe

Well, eventually the average price may indeed go up. The problem is
that the multitude of quality control issues with the Satellit 800 gave
it the reputation of being a lemon. And that reputation does persist.

For the features and performance offered, the Satellit 800 is a steal
at some of the prices they're going for nowadays. I had sworn I'd
never buy one after reading complaint after complaint on this problem
or that. But when I found one for sale at the $200 range, I went for
it. And it's worth that. I knew that there was the chance that it'd
have some defects/quirks. And it does, indeed (the most annoying
problem being that theres some back-frequency jumping occasionally when
the tuning knob is being turned clockwise). And, after a bit, I
suppose I'll send it to Drake for whatever work is required. And it'll
be worth it, I'm sure, because this is such a darn pleasant radio to
listen to!

I never saw the need to get a Sat 800 because I've got a decent SW8 which is very similar to the Sat 800 in terms of features. But the low price prompted me to buy. And I have to say that, the handful of problems aside (and I'll eventually get this unit serviced by Drake; it's worth it), the Sat 800 is a very nice radio. One of the most pleasant sounding sets out there.

Of course, to some extent, my unit has confirmed what I had heard: that this radio is a box full of problems. But, heck, the complainers had failed to mention what a nice radio this is to listen to on an hour after hour basis.

Anyway...my opinion...there it is.

I am going to buy a Degen or Kaito 1103. I just bought the DE1107 which is an analog radio which looks like the 1103. I gave to Niece for being such a nice kid and studying hard. I played with it before I gave it to her and I really liked mobile SWL. I don't know why I would buy a Kaito tho cause I think they are a lot more money than a Degen from Lipyn.

Mister seeing eye dog - I don't care about resale and will give radio to another of the kids in the family and then maybe upgrade. I will take your advice for nice Sony portable from other thread and consider.

So what is up with the tuning steps and the fine tune. Is cw just tune to side of the carrier and is there a real ssb mode or BFO? Radiointel review wasn't clear (to me) on exactly what wqas going on. I like to listen to both SSB and CW so I need to be able to dial in nice.

regards,
Bob

It's BFO, and it works surprisingly well. Set it once for someone on
frequency and you only have to fiddle a bit for the odd ball who is .5
khz off. Of course it isn't as simple as product detectors and true
fine tuning, but this is only a $60.00 radio.

>

I've been fairly pleased with the audio quality on the E1. Of course, I use this radio as a portable, primarily: as in, "let's take this boy on the road and do some shortwave listening, if time permits." And for that purpose, it has supplanted my SW77 and '2010. Yes, the '800 is portable in that it's a self-contained unit that can run off of internally installed batteries; but in the real world, I'm not likely to be carrying it along with me on the road. Heck, I had to go to Ikea to pick up something to sit the '800 on, such is its size.

Really, the E1's peer group would logically be the other premium grade lap-portables: SW77, '2010, Satellit 700, Satellit 500. The Satellits may indeed have an edge in sound quality. The E1 definitely sounds better than the SW77 and '2010. And in terms of selectivity, the E1 bests any in this grouping. Coupling the sync detector w/the passband tuning truly gives the E1 a real performance edge over these other portables where selectivity is concerned. Furthermore, the sync detector on the E1 functions as flawlessly as any I've encountered. Certainly better than the Sonys.

Some folks have observed that the Sonys might have an edge over the E1 in terms of sensitivity. Perhaps so, although not by much, and even this is noticeable only on occasion. Moreover, the E1 is much more capable of handling a "real" antenna than your Sonys...especially the '2010 which overloads more horrendously than the SW77. Bottom line, I string up an antenna of some sort with my E1 more often than not, no matter where I take it; and I hear more with the E1 than I would with my Sonys. Even off the whip, the E1 is a great performer, for that

matter.

> 2) It has only one external antenna connection, not three as on the
> Satellit 800.
>
More antenna connections are a convenience. And the PAL connector is
an annoying inconvenience.

> 3) It has no Air Band (I have found this to be very useful) and I have
> absolutely no interest in any "pay" radio service.
>
Never had much use for the Air Band. And I have no interest in XM
(Sirius has the better channel line-up). If I did have an interest in
XM, I would get a cheap plug-n-play unit which would offer a wider
range of listening options (in car applicability, remote control, etc);
I would not use the E1 for satellite radio listening.

> 4) A fairly large "portable" radio with no handle? This makes no sense.
>

Given its dimensions, I'd say the carrying strap option would be better
for the E1. But they didn't include it. That said, since I actually
use this radio for portable applications, I have a case so that I can
carry this radio about without it getting knocked about. And, of
course, the case has a handle: Pelican 1450 case...I already had it
for my SW77 (which had a carrying strap; but in carrying a $500
portable about, you want some protection for your radio, right?). I
simply ordered a new foam insert to cut for the E1's dimensions (room
for a few accessories, too).

> 5) No internal ferrite antenna for MW and this is, in fact, due to a
> lot of digital "hash" generated within the receiver. This is poor
> design, in my opinion.
>

A major complaint, and a valid one. I'm not much into MW DXing,
though.

> Overall, PASSPORT and every other review I have read are very positive
> about the E1 but the limitations mentioned above preclude me from
> considering it. The Grundig Satellit 800 has NONE of the above problems

> tabletop (with virtually all of the advantages of same) and as a
> portable (with all of the advantages portables offer except the ability
> to take it on an airplane).
>

Well... Perhaps the inability to take the Sat 800 on an airplane isn't
the only portability disadvantage that radio have vis-a-vis mid-sized
to compact portables. The Satellit 800, like the Drake SW8, is not
very easy on batteries at all. By contrast, the E1 is quite decent on
batteries. If going on a short weekend trip, I'm far less likely to
take along the Sat 800 precisely because of its size and because I

often listen in places where there's no access to AC power. In any case, the Drake SW8, despite its rather large size, is certainly more portable than the Sat 800 and it more sturdy in its construction (let's face it, the Sat 800 isn't of the kind of construction where you'd feel comfortable with it taking even a slight knock; it's no surprise that Universal recommends triple boxing this radio); and performance-wise the SW8 does have an edge over the Satellit 800. So... on occasion where I am making a trip where I fully intend to get in some serious shortwave listening, I'd take the SW8 and a few decent antennae (along with a couple of D-cell 12 packs). On such occasions, I'll take the E1 along, as well, for that matter, since I like to alternate between two radios and compare when doing more "serious" listening. Given its much smaller size, I'll chuck the E1 along frequently (as I used to with the 'SW77 or '2010) on short excursions on which its questionable as to whether I'll get any listening time in or not. For air travel, though, I likely would not take the E1 along, unless I were spending more than, say, 6 weeks away from home. In any case, I suppose the need for portability and what, exactly, is portable varies from person to person. I do a helluva lot of listening away from home; so, naturally, I like to take along a radio that's going to afford the most in way of performance. For a lot of folks who do the majority of their listening from home, I'm sure this is less of an issue.

I know that there are some who consider the E1 to be priced too highly. That's fine. Perhaps it is by one standard or another. In any case, I have found it worth the price because it nicely fills an important niche for me. Sure, I could have paid 500 + x and gotten an Icom R75. But I have no need for an R75. I have a number of tabletop sets, including a Drake R8B. While, true, I can hook a tabletop up to a large SLA battery and take them out on excursions (and I have on a few occasions), it's not particularly convenient, and it's not something you'd just chuck in the car on a whim. For me, the E1's convenient and self-contained package (no NEED for external accessories unless you want to use them) and excellent shortwave performance make it an outstanding choice for the purposes toward which I employ this radio.

> And at its current offered (eBay) price of $200-300 (and even
> considering that you may have to send it off to Drake for perhaps
> another $100) it is the best buy in shortwave radio right now.
>

I'll agree that the Sat 800 can be an exceptional buy on eBay...a lot of performance for the price paid.

> I realize that most of you will disagree with me (and with Mike) but
> that's my opinion!

Thanks for sharing your opinions, Joe. It's always with interest that I read your postings, as you tend to put a great deal of thought into your assessments.

Regards,

Junius

> let's hold our breath for the Degen DE-1108

I don't think I'll be holding my breath on that one, although hopefully it will prove to be an interesting radio when it materializes. The dimensions and description, as listed on RadioIntel.com really paint this radio to be a one-of-a-kind sorta thing. It's supposedly going to be 14'' wide and 7'' tall, w/two speakers... leading me to wonder if this is going to be of some sort of small "boombox" appearance.

In any case, I'd just like to know how credible the emerging 1108 story is...whether its based in any reality. From what I've seen, there was the little episode in early 2005 where someone started a thread here, claiming to be doing research in prep for the 1108... Hmmm...
then, months later, this description emerges on RadioIntel that someone is suppposed to have translated from a Degen user's message board! Hmmm....
And what a list of features...they just need to add a Holly Hobby Oven beneath one of the three LCD displays, and it's complete.

It's all possible. But I'm not holding my breath! ;)

There's also the 1045C which is not designed as an active antenna.

http://www.mfjenterprises.com/products.php?prodid=MFJ-1045C

According to one of the techs I talked to at MFJ, this unit is to be preferred over the 1020C, if your main concern is preselection. Of course, it comes with no whip antenna. Runs off of a 9V battery as well as from a wall wart (just like the 1020C). The description says the 1045C accomodates 2 antennae and 2 receivers: not true; it's for one antenna and one receiver, although it does have both a UHF and an RCA connector for your antenna connection and the same for connection to your receiver.

That's the BFO knob...works like the Sony ICF2002 and later radios.

A few small warts notwithstanding it's really an amazing little radio.
I've listened to hams from 160 on up with no problem. Also caught some
maritime traffic, a few airliners, etc.

My Degen 1103 is stable and sounds great on SSB. The little BFO thumbwheel takes the BFO plus/minus about 3.0 KC.....more than is needed to bring in SSB voice to sound natural. The radio has a wide/narrow selectable filter switch. I usually use the Wide filter, even on SSB.

It is a fantastic radio for the money.

Buy one, you won't give this one to a niece! You'll keep this one.

What kind of radio and antenna are you using. Unless you are using
something really old I don't think a preselector or an antenna tuner
will do you much good at all. They will end up being another set of
knobs to twiddle and twist. You will find the tuner in particular will
raise the signal level, but it will raise everything and no new signals
will magically appear from the ether.

Last Transmission. The Yaesu FRG-7 is a good analog receiver. It is a good value for the 150-200 dollar price range. It is fun to operate and will last many years of operation. There are modifications available for this old receiver to improve reception. The main advantage of a analog receiver is its ability to "surf" the radio bands via random tuning... The Yaesu FRG-7 can random tune very well, where this is not the case with some receivers of the digital variety. Yes it is a old receiver, but the fun factor is there with this old receiver and good audio quality too. After you toss all of those little plastic-box radios into the junk pile, my Yaesu FRG-7 will still be kicking-out the the sounds.

I think he's trying to say that you can't fine tune a PLL receiver for
"them in-between radio stations" like you can with an analog design but
that of course depends on the tuning resolution of the PLL receiver.
Ain't C2H60 neat. :-)

I thought it was my Halli' S20R, circa 1939. I did more DX'ing with that radio than any since and I've had a lot of radios since the S20R. I was really motivated in those days. :-)

It depends on what's overloading the receiver. Are you located close to a strong AM station? In general, a passive pre-selector should help but you might need just a frequency 'trap' to reduce the strength of the offending station. Are you using coax for the antenna lead-in or just a single wire?

> siting in the unopened box in front of my cofee table,5.0 Peak
> Horsepower

I thought the Ethics in advertising people made these people STOP using fraudulent horsepower claims. Sears Horsepower is a JOKE.

To arrive at their insane figures, they do the following:

a) feed the motor with wires the size of your wrist and a HUGE breaker.

b) lock the rotor to prevent it turning.

c) read the current at it's maximum just before the armature melts down.

They then multiply the nominal, before any load, line voltage times the locked rotor current to get horsepower figure that you will NEVER see. It's all BS.

Vacuums are weird things anyway, the more clogged up the hose gets the less air it allows through. The motor actually works LESS with a clogged or restricted hose than it does when pumping free flowing (read 'non-vacuuming) air. The thing may get warmer because of a lack of cooling airflow, not because of greater work being done.

I get roughly THIRTY amps current draw needed to provide a five horse rating at 120 volts. That would mean, what? Ninety amps starting current?

I wonder why there hasn't been a class action suit over this.

I don't think that there is attenuation in MW on the R8....I know the preamp cannot be enabled on MW but, I am pretty sure that there is no attenuation in the front end on that band. Maybe I'm wrong.

I think you are right. I should have asked if the pre-amp can be made to
work in MW.

None of my radios have built-in ferrite antenas, except for the little
portables, which do nothing but buzz and whistle inside the house.

The simplest solution is to reduce the signal strength. cut back on
the gain control or switch in the attenuator if your radio has one.

Unless you are experiencing problems I would not look for a solution.
An R1000 will do just fine on a simple longwire. believe the radio
has an attenuator and an rf gain, and both can be used to minimize
strong signal effects.

Congrats on owning a classic.

Well, sure, if the radio only tunes in 1khz segments that's all you
get. Most digital radios offer some way of refining the resolution
when needed. The little DE1103 gives 1khz resolution on AM which is
fine and uses a bfo to tune hams accurately. A pricier radio like the
R5000 offers several tuning steps right down to 10hz.

It's a really nice radio. Got it off eBay a while ago. First
non-portable I've had in many many years. Should have done it long
ago. Blows the portables away.

If you're tuning an unbalanced, random-length wire, the MFJ 16010
L-circuit tuner is fine, and is only 49.95

For a balanced antenna, a dipole, say, the MFJ 901B Versa Tuner would
work -- it's 79.99

The MFJ 956 preselector/tuner is another possibility

Anybody can build an LC tuner for under $20 in about 15 minutes. You
need a tapped air core coil, a variable cap, a few clip leads and a
slab of peg-board. Excellent first project.

The double price for the Kaito version available through stateside dealers
is for the warranty - you will need it!
Purchasing a Degen from China for half the price of a Kaito, for all
practical purposes, makes Degen's warranty worthless.

Okay. I've just about had it with this crap. I've been away from the radio
to about 2 weeks since the last time I met with Pedernalis Electric.
ABSOLUTELY no action, no movement, no nothing from them. Nothing but big
electric bills and a steady 20+ over buzz on 20 Meters. I've been nothing
but nice and as helpful as possible to these guys, but its alomost as
is they think I'm supposed to solve their problem for them.

I'm considering contacting an FCC office. Any suggestions?

I have found the 956 to be useless on my DX394 w/Eavesdropper antenna, does
absolutely nothing for or against reception/signal.

Real radios.

They usually just throw in a single IC chip tuner that brick-walls the
high frequncies at around 4500 Hertz. If you try to use anything
other than the 6 feet of wire on a loop that comes with the receiver
the things will overload like crazy.

Hi there Chris!

I live in Florida like 10 min away from South Beach. I would try replacing the string in it first. I think it uses a string since it's analog. I never opened my 7700 so I don't remember if it uses one or not. If it does, replace it. I would also try cleaning the VFO first. Must be very dirty after all this time. Don't use the Radio Shack crap. Buy the good stuff called Caig Pro Gold cleaner. It's the best to use on old equipment. Good luck
Try this page for the stuff.

Actually, you can get this DeoxIT twin-pack at Radio Shack:

http://www.radioshack.com/product/index.jsp?productId=2104746&cp=&kw=deoxit&parentPage=search

"Enhance your electronics.
This kit contains both DeoxIT Power Booster and ProGold Connector
Enhancer sprays from Caig Laboratories to help improve the performance
of your electrical devices.

"Cleans any metal-to-metal contact to improve conductivity and reduce
further oxidation
ProGold Connector Enhancer works on gold connections to improve
conductivity and prevent oxidation

"Both products have mini-spray applicators to make them easier to use"

"What's in the box

"DeoxIt Power Booster Spray
ProGold Connector Enhancer"

$14.99 at your local RS. You can check availability @ from the link
above.

An ANC-4 and two antennas works wonders. You can null any single
source right out.

Including, of course, radio stations, so you can use it even after
the noise is fixed.

I generally locate the particular pole and then report arcing on it.

Sparks get higher priority.

MFJ products are hit and miss as far as quality and functionality.
Their tuners are the most functional of their products based on user
comments. As to their customer service - I'd prefer to speak to
somebody in India, my experiences with them have been very poor and I
was even a decent accomodating customer from the get-go. And yes,
many hams are full of it.....as are many SWL'ers and most folks in
general.

Well, if it were Alpha Hotel, certain posters here would be charter members.

Kind of odd they spelled alpha wrong.

I don't know much at all about BPL. But I believe it does not affect
the AM/mediumwave band. Your test with the AM radio sounds like a good
indicator that BPL is not the problem.

859. Three MFJ Shortwave Listening (SWL) Antenna Pre-Selectors {Tuners?} + "Mini-Size" Shortwave Listener (SWL) Antennas + "Micro-Size" SWL Active Antennas

Newsgroup: rec.radio.shortwave
Date: 2006-04-08 21:39:04 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1144532344.700109.259170@e56g2000cwe.googlegroups.com>
Source record: 70017

Coustanis,

Three MFJ Shortwave Listening (SWL) Antenna Pre-Selectors {Tuners?}
+ "Mini-Size" Shortwave Listener (SWL) Antennas
+ "Micro-Size" SWL Active Antennas
+ Longer "Random" Wire" Antennas and Pre-Selectors
for Shortwave Listening (SWL)

The MFJ-1020C Shortwave Listener (SWL) Active {Pre-Amplified}
Indoor Antenna actually covers the LW - MW - SW Bands from
300 kHz to 40 MHz
http://www.mfjenterprises.com/products.php?prodid=MFJ-1020C
The MFJ-1020 is quit helpful as a Pre-Selector for AM/MW
Broadcast Band Listening with an External Antenna besides
using it with the Shortwave Bands.
http://www.universal-radio.com/catalog/sw_ant/1413.html
TIP - Use the MFJ-1020 it with a shorter smaller out-side
Antenna for a cleaner Signal along with the Pre-Amplifier
to boost the Signal as needed.
http://www.universal-radio.com/catalog/sw_ant/1413rear.jpg
AM/MW DXING - For general all-a-round AM/MW DXing
a CB (10m) Whip Antenna mounted on a piece of Top-Rail
with a Coax Cable feed-in-line works pretty good with the
MFJ-1020 Active {indoor} Antenna used as an Active
"Out-Side" Antenna Pre-Selector.
http://www.universal-radio.com/catalog/sw_ant/1413lrg.jpg
FWIW - As a general Pre-Selector I recommend the
MFJ-1020 over the other two listed in this message for
it's greater coverage and overall utility as both an InDoor
Active Antenna; OutSide External Antenna Pre-Selector
and shorter-smaller External Antenna Pre-Amplifier.
http://www.universal-radio.com/catalog/sw_ant/1413spec.html

The MFJ-1045C Shortwave Receiver Pre-Selector covers
'only' the Shortwave Bands from 1.8 MHz to 54 MHz
http://www.mfjenterprises.com/products.php?prodid=MFJ-1045C
http://www.universal-radio.com/catalog/preamps/mfj-1045c.jpg
Note - The MFJ-1045 does not cover the LW and AM/MW
Bands from 300 kHz to 1.7 MHz.
http://www.universal-radio.com/catalog/preamps/0807.html
TIP - The MFJ-1045 can also be used with a shorter smaller
Out-Side Antenna for a cleaner Signal {less indoor noise}

along with the Pre-Amplifier to boost the Signal as needed.

IMHO - Both the MFJ-1020 and MFJ-1045 and other Active
{Amplified} Pre-Selectors can be used very effectively with
"Mini-Size" Shortwave Listener (SWL) Antennas when the
SWL has a limited space for, or restrictions on the location
and placement of their Antenna.

ABOUT - "MINI-SIZE" SWL ANTENNAS :
"Mini-Size" Shortwave Listener (SWL) Antennas
that are under 16 Feet
* Short Vertical Wire or CB (10m) Whip Antennas
* Short Horizontal Wire Antenna
* Small Inverted "L" Antenna [5-7 Ft Up and 8-10 Ft Out]
* Small End-Fed Inverted "V" {Bent} Antennas
[Apex of the "V" about 1/3 the Length of Wire]
* Small Off-Center-Fed 'Mini' Windom Antenna
[6 Ft Short-Arm and 10 Ft Long-Arm]
NOTE -These "Mini-Size" Antennas can be either OutSide
in the open air; Under-the-Eaves; or In-the-Attic.
ADD - A Grounding Point {Ground Rod}
PLUS - A Matching Transformer

ALTERNATIVE "MICRO-SIZE" SWL ANTENNAS :
For anything shorter-smaller then these "Mini-Size"
Shortwave Listener (SWL) Antennas - Consider one
of the very-small-and-short "Micro-Size" SWL Active
Antennas like the :
* LF Engineering H-800 SkyMatch Active Antenna
* Dressler ARA60S [ARA60 ARA-60] Active Antenna
* North County Active Antenna {Kit}
* RF Systems DX-10 Active Antenna
Read - ABOUT - "Omni" {Non} Directional Vertical Active Antennas
http://groups.google.com/group/rec.radio.shortwave/msg/57df7f47f701f5f4

http://groups.google.com/group/rec.radio.shortwave/msg/bc336b89160888d8
Read - Small Vertical {Omni} Active Shortwave Receiving Antenna
and Free-Standing "Grounded" Metal Mast {Top-Rail} Mounting
http://groups.google.com/group/rec.radio.shortwave/msg/81be298d354f68f8

http://groups.google.com/group/rec.radio.shortwave/msg/89d05099dc0d45fb

WHAT ABOUT - LONGER "RANDOM WIRE" ANTENNAS
AND PRE-SELECTORS FOR SHORTWAVE LISTENING ?
The MFJ-956 "Passive" {No Amplifier} Antenna Pre-Selector
works well with longer Random Wire Antennas [150+ Feet]
http://www.mfjenterprises.com/products.php?prodid=MFJ-956
Consider the MFJ-956 "Passive" Antenna Pre-Selector
http://www.universal-radio.com/catalog/preamps/2964.html
which covers : Long Wave, AM Medium Wave and the
http://www.universal-radio.com/catalog/preamps/2964band.jpg
Shortwave Bands form 150 kHz to 30 MHz.

http://www.universal-radio.com/catalog/preamps/2964rear.jpg
When your Shortwave Listening (SWL) Antenna is longer than
150 Feet. With an Antenna over 150 Feet the Signal Levels
should be high enough at your Receiver's Antenna Input so
that a Pre-Amplifier is not needed and could cause Front-End
Signal Overload problems is used with these longer Antennas.
So if you are using a 150 Foot Plus SWL Antenna consider
the MFJ-956 "Passive" Antenna Pre-Selector.
Some will tell you to go and find an old Grove TUN-3 on eBay
as they feel that it is a better "Passive" {No Amplifier} Antenna
Pre-Selector. Others will suggest trying the combination of the
Yaesu FRT-7700 "Passive" Pre-Selector and Antenna Tuner
and the Yaesu FRA-7700 "Active" Antenna.

hope this helps - iane ~ RHF

I would write an email to Ten-Tec and see if they will send you one.

Go here for updates on the radio software. Latest version is 1.15. There is also a link on this page to download a programmers guide to the radio that might be helpful to you.

They must have a way of escalating complaints. Keep asking for a higher
up the food chain manager.

It helps to make complaints in written form instead of a phone call. Put
all pertinent facts in it like what frequencies, levels of interference
on them, dates of interference. Include dates and content of phone
conversations and whom it was to spoke too. Give them time to work on
the written communication and then you can use the written mail or email
in your FCC complaint if it comes to that.

When you have a problem that is not be solved it is important to put
everything connected to the dispute in writing.

I have not monitored that ham band but 16 meters on down seems to be
good most days in recent history. Above 16 meters is a little more dicey
due to being at the sun spot minimum.

Whatever you do, don't let any of those silver party balloons get loose
near the power lines, especially at night where you would be hard to
spot.

BTW, the ANC-4 helped a great deal when I used a long wire. Since I
went to the wellbrook, I don't use it since the magnetic loop picks up
very little electrical noise. The ony reason I keep it around is if I
get another wellbrook and want to try nulling.

Well, I suspect that if you wanted to pay 10x more for a radio that
you'd get a much better tuning system. But wouldn't that put you in the
range of rack-mounted professional comm receivers, like Watkins Johnson
and some of the Ten Tecs?
>
> I PERSONALLY feel that someone (like the OP) who complains about the
> lack of digital freq display on a stock FRG-7 probably is either too
> young to know how to interpolate a frequency off a tuning dial, or he

I never learned this. I never learned it was possible until I read about
it in an article in Passport in 97 or 98. I started out in 1986 with a
Hallicrafters S-40 that had a main dial and a fine tuning dial. I DO
know that Yaesu was trying to make it as easy as possible to read an
exact freq off the dial using analog, and that once you get past the
quirkiness of it, you can get pretty good at it. But the digital display
made such interpolating and mental gymnastics obsolete.

869. AM/MW Antenna Tuner-Coupler for common AM/FM Radios and Tuners

Newsgroup: rec.radio.shortwave
Date: 2006-04-08 23:23:42 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1144538621.974126.210570@t31g2000cwb.googlegroups.com>
Source record: 70027

Blitz,

AM/MW Antenna Tuner-Coupler for common AM/FM Radios
and AM/FM/Stereo Tuners

To 'couple' a simple LongWire Antenna to a so-called
HiFi Tuner {AM/FM Radio} :

* Use the simple {small} basic AM Loop Antenna that
comes with most modern AM/FM/Stereo/CD/Tape/Aux
Sound Systems and the many of AM/FM Radios.

* Then get a Select-A-Tenna Model 541-M and use
the 1/8" Mono-Jack on it as an Input for the LongWire
Antenna and Ground. The Select-A-Tenna becomes
the AM/MW Tuner-Coupler for the LongWire Antenna.

Place the Radio's basic AM Loop Antenna close to
the Select-A-Tenna and move it In-and-Out to vary
the Coupling between the two Loops.

TIP - The Select-A-Tenna can also be 'Positioned'
{Rotated} to : Peak a Weak Signal -or- Null-Out a
Strong {Interferring} Signal.

FWIW - The Terk AM Advantage 1000 Loop Antenna
and the RadioShack AM/MW Loop Antenna both have
1/8" Mono Input/Output Jacks and can do the same
basic job as a AM/MW Tuner-Coupler with most modern
AM/FM Radio's and AM/FM/Stereo Tuners.

hope this helps - iane ~ RHF

Co-locate an active whip with the Wellbrook, and you're in business.

The ANC-4 sweeps a V-shaped null from one endfire to the other, endfire
being in the plane of the loop, the V closing at endfire and opening to a line
at broadside.

This takes no real estate, and in particular works on MW.

I use a McKay Dymek DA100E for the whip. (Actually I have 2 Wellbrooks
and 6 DA100E's combined in 7 ANC-4's, but this works great with just the
loop and whip)

AOF,

Please do not demean "Prostitutes" {good-working-ladies}
a Bad Name by calling Reporters "The Press" Prostitutes.

When one wishes to refer to "The Press" the proper
derogatory term for "The Press" is a Bunch-of-Whores.

The difference between "The Press" and Politicians is
although the Politicians can also be a Bunch-of-Whores
they are much more aptly described as . . .
a-Bunch-of-Thieving-Whores {Stealing from the People}

But at least Politicians must be 'elected' and can be
removed when the People decide that the Politician
no longer serves their interests and needs.

However - "The Press" is Self-Appointed {Anointed}
and the general Liberal {Left-Wing} Agenda does not
reflect the interest or the needs of the People. For the
most part Members of "The Press" are Elitist Liberals
Who Know That They Know More And Are Smarter
Than Their Readers, Listeners and Viewers.

Guess What ! - "We The People" Know Better [.]
'because' of our-greater-collective-common-sense.

Jeff Gannon
From Wikipedia, the free encyclopedia
Jump to: navigation, search

James Guckert, a.k.a. Jeff Gannon, a.k.a. Bulldog.James Dale Guckert
(1957) worked under the pseudonym Jeff Gannon as a White House
reporter between 2003 and 2005, representing Talon News. After Guckert
came under public scrutiny, in particular for his lack of a
significant journalistic background and involvement with various
homosexual escort service websites using the professional name
Bulldog, he resigned from Talon News on February 8, 2005. Continuing
to use the name Gannon, he has since created his own official homepage
and become a columnist for the Washington Blade newspaper, where he
has come out, claiming to be a bisexual.

Guckert routinely obtained daily passes to White House briefings. He
attended four Bush press conferences and appeared regularly at White
House press briefings. Americablog, a Weblog focusing on gay rights
issues discovered Gannon's pseudonym and made public his past history,
as Guckert, 'Gannon', 'Bulldog', and 'Lou'. Questions have arisen as
to Guckert's relationship with the White House and with the Republican
Party. Although he did not qualify for a Congressional press pass,
Guckert was given daily passes to White House press briefings "after
supplying his real name, date of birth and Social Security number."
[1]

Guckert first gained national attention during a presidential press
conference on January 26, 2005, in which he asked United States
President George W. Bush a question that some in the press corps
considered "so friendly it might have been planted."

You're pretty high and far-out, aren't you?

http://www.ew.com/ew/fab400/tv100/60s_p5.html

The first case that came to mind when Acid Logic Editor Wil Forbis and
I had the initial meetings laying out the groundwork for a possible
article about "Dragnet" was the infamous "Blue Boy" episode - The Big
Premiere Episode of "Dragnet", Written and Directed By Jack Webb, and
chosen in a recent TV Guide - Nick At Nite poll as the 85th Greatest
Episode Of Television History. Only 85th!? Screw TV Guide - Nick At
Nite! We had an Acid Logic - Nicole Kidman poll and "Blue Boy" came in
second after some weird ass Australian soap opera that didn't even
have kangaroos (Is there any way to blame that one on Steve Harvey?
). "Blue Boy" is the identity eighteen year old Benjie Carver assumes
when he corrupts his once pure White Man's mind and body with a spirit
killing drug the FDA has since identified as "LSD". When first seen
Blue Boy has his head stuck in the ground like an ostrich which might
be cute if only an ostrich did not have it's family's good name to

uphold. Then he tries to eat the bark off of a tree leading Sergeant Joe Friday to observe "You are pretty high and far out. What kind of kick are you on, son?". They try to talk a little sense into the boy, but you know how it is with these LSD addicts, he just paints one side of his face blue and the other side yellow and continues shooting up or snorting or whatever those poor souls do with that LSD poison until he drops dead. The End. And YEAH YEAH YEAH YEAH, we KNOW that there's no way that you're ever gonna die from . . . uh, taking LSD, okay? Jack Webb coulda given a rat's ass about the correct technicalities of the greasy commie drugs those little faggots were wasting their lives on, okay? "Dragnet" was set in the very recent past, if they were going to have an accurate demonstration of the negative effects of LSD on Blue Boy they would have had to go about thirty five years into the future to show the poor burnt out wreck writing articles about James Ellroy and David Alan Grier for some crap-o web site called "LSD Thinking" and that didn't fit into the show's format. Me, I think Blue Boy had a psychedelic sci fi vision of a world torn apart in a genocidal race war between the people who's left side of their face was yellow and the right side of their face was blue and the other people who's left side of their face is blue and the right of their face is yellow, had the revelation that Frank Gorshin is GOD, and died. Benji "Blue Boy" was played by Michael Burns, a member of Webb's elite repertory troupe (Although I'm sure Jack would have spelled it "troop"). Burns later starred in another very disturbing "Dragnet" as a juvenile delinquent who's insatiable Lust For Kicks leads him from joy riding around LAin stolen cars to walking up to a man waiting at a bus stop and blowing his head off with a shotgun. Try pinning that one on Frank Gorshin, punk!

But far as "Dragnet" goes, "Blue Boy" is the whole enchilada in a nut shell - Good clean American kids fall under the psychedelic spell of those hippie creeps and are ruined for life. Maybe it sounds hokey now, but in the late sixties when many in the media were presenting those slobs as nothing less than America's Best And Brightest, it took more guts than Jane Fonda's small intestine, Tommy Smother's liver, Joan Baez's lungs, and Allen Ginsburg's ass fat all ground up into a big slimey blob and dropped onto the young Bill Clinton's head from a fifteenth story window.

Since the ANC-4 is just combining antennas out of phase, wouldn't I be
getting noise from the active whip? Or is your theory that the signal
used for cancellation is not that strong, so the added noise would be
insignificant.

I still think two Wellbrooks woud do a better job. I'm still hacking
with my ALA-100. I've got a multi-turn loop at the moment that is so
strong that some local BCB stations force my attentuator to turn on.
The ALA-100 needs lots of space between the turns. About 8 inches does
the trick. Otherwise the upper frequency response seems to suffer.

I don't quite follow your explanation, but I gather using the NAC-4
with a loop is similar to the direction finding gear that uses a
similar set up. It turns the loop from a figure eight to a cardioid.

Nah, you're totally clueless on this one...nothing to do with vandalism.

Using a hand sledge to "thunk" a pole while listening to the noise is a time honored troubleshooting technique. Unfortunately, it's slightly dangerous as the possibility exists that you may end up knocking loose hardware or a live phase wire on to your head. But vandalism....no.

You might say "fool for caring"; others might call it "intellectual curiosity" for wondering why, in this era of heightened security and "Homeland Security" that we let a character like Guckert/Gannon freely roam the Seat of Government.

> Id like to know why the white grant

908. The McKay Dymek DA-100E is still being made . . .

Newsgroup: rec.radio.shortwave
Date: 2006-04-09 07:29:55 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1144567794.924836.154000@u72g2000cwu.googlegroups.com>
Source record: 70065

Cuhulin,

Not so... The McKay Dymek DA-100E is still being made
and is available from Universal-Radio - and other sources ?
http://www.universal-radio.com/catalog/sw_ant/0328.html
The McKay Dymek DA-100E is a general coverage Active
Receiving (Only) Antenna which covers 500 kHz to 30 MHz.
The McKay Dymek DA-100E is Priced at about $180.
http://groups.google.com/group/rec.radio.shortwave/msg/25fae61382d7c066

The McKay Dymek DA-100E uses a 56 Inch Vertical Antenna Element
http://groups.google.com/group/rec.radio.shortwave/msg/81be298d354f68f8

However - Both the Mckay Dymek DA 5 and DA 7 Shielded
Ferrite Rod Directional AM Antennas with frequency and
sensitivity controls are hard-to-find 'collectable' items.
Read - FYI - Radio Enthusist and Collecter's Gear :
McKay Dymek AM/MW Radios and Antennas on eBay
http://groups.google.com/group/rec.radio.shortwave/msg/8035e9110ae191b4

Read - ABOUT - "Omni" {Non} Directional Vertical Active Antennas
http://groups.google.com/group/rec.radio.shortwave/msg/57df7f47f701f5f4

http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/6549

Note - The MFJ-1024 Active Receive (only) Antenna
also covers 50 kHz to 30 MHz and is priced at $130.
http://www.universal-radio.com/catalog/sw_ant/1132.html
The MFJ-1024 is Designed for OutSide {OutDoor} Mounting
http://www.mfjenterprises.com/products.php?prodid=MFJ-1024
http://www.universal-radio.com/catalog/sw_ant/1132.html
The MFJ-1024 uses a 54 Inch Vertical Antenna Element.

Discontinued - The Sony AN-1 Active Antenna covers
150 kHz to 30 MHz = LW + AM/MW + Shortwave Bands
http://www.universal-radio.com/catalog/sw_ant/2206.html
The Sony AN-1 uses a 59 Inch Vertical Antenna Element
but works well with an 104" CB {10m} Whip Antenna as
the Antenna Element.
- - - Recently there were Messages posted here on RRS
that talked about a new replacement for the Sony AN-1
Active Antenna.
Read - NEW - Sony AN-12 Active Antenna
http://groups.google.com/group/rec.radio.shortwave/msg/7767515e6f856a63

Cuhulin,

The Eton "E1" AM / FM Shortwave Receiver with
'optional' XM Satellite Radio does in-fact have a
built-in AM Medium Wave Antenna. The Radio's
Whip Antenna is used for the AM/MW Band and
is very good in receiving AM Radio Stations in
the Medium Wave Band.
ETON E1 RADIO GROUP => http://tinyurl.com/9lfd7
<http://groups.yahoo.com/group/ETON-E1-XM-Radio/>

FWIW - The vast majority of Automobile Radios use
a Whip Antenna and most are consider to have very
good all-a-round AM/MW Radio Reception.

well, most of the garden variety (low end retail market) radios such as sangean, radio shack, etc., all tune in 1 kHz segments. the only way to get finer involves using a bfo in ssb/cw mode. I know this as I was a user of one such radio (sangean model ats-803a) for more than 3 years. also, such radios tend to have horrid selectivity and not much in the sensitivity Dept. either. :(

if you start going with the slightly better (and loads more expensive) radios, then you get some better control over such situations (and also have better quality sound and reception). it all pretty much depends on what you are willing to pay for.

I'd recommend you get a local ham out (especially one that is familiar with that utility co. and has some engineering experience behind him) and have him scope the problem out. a call from someone with a bit more in the engineering dept might get that utility to pay attention. some of you in here will object to this (as do amny in the cb forum) but calling in the fcc is absolutely the *last* resort here (mostly because they have bigger fish to fry).

your best bet would be someone from the local ARRL affiliate or state sponsored ham organization.

that is pretty much how I solved a very bad problem with APS a few years back (they ended up having the replace a lot more than a couple of shot insulators though).

You do pick up noise, but you also pick up signal, and in the direction of
the max gain you're ahead (the noise combines randomly and the signal
coherently).

However, getting rid of the noise source is the chief effect, and that's
a 40db gain in S/N, which is all you'll notice.

It does change from cardioid to 8, which if you look is an endfire with a
double null to a broadside opened-V null, as I said. Further, the pattern
continues until it's a double null in the opposite direction.

Phasing two loops isn't as effective because, near broadside, the phase of
the signal is very unstable. It's almost got the opposite phase, if it
switches from slightly left of broadside to slightly right (the loop catches
the magnetic field on the back instead of the front), and the signal strength
is similarly unstable. So you can't phase it against the other loop very
easily, or very long.

With two loops, ironically, the way to phase something out is to aim the loops
AT it, which gives the most stable signals. So you're sort of working against
yourself, compared to whips, as to getting rid of signals, unless they themselves
are very solid in their direction, like a local noise source.

The loop + whip combination is lovely because it takes no real estate. You
co-locate the two antennas.

I tap poles to verify that they're the source; in fact the linemen
do the same thing. You need enough jostle to rattle things slightly,
which isn't much.

I find they're more sensitive than the Wellbrook, and use them (6 of them) for MW.

You'll notice the sensitivity difference very much at higher SW frequencies.

I can't compare them with other whips, not having tried others. These worked fine.

(I've had two of (now) 8 crap out over a decade, giving an average life 15 years,
I guess.)

If you're not phasing them, you can plug the Wellbrook into the back of the DA100E
controller and it will be the default antenna if you turn the DA100E off.

Incidentally watch out for the opposite polarity of the DC power plug on the
Wellbrook (unless you ordered the non-US version) as to mixing up wall warts.

They're compatible except for the wiring of the power plug; in fact the DA100E
controller works with the Wellbrook, as I accidentally discovered. Both put
+ on the center conductor of the coax, fortunately.

Oh maybe you're thinking since the whip picks up electrical noise more than the
loop, you'd be hearing the electrical noise.

No, actually that's an advantage. The purer the unwanted signal on the second
antenna, the less of the antenna you need to add in, and you don't affect the
reception of the desired signal as much, in case it's not in the direction of
the resulting antenna pattern's maximum.

Everything is dead due to the lowest point in the sunspot cycle being acheieved. I know that 20 meters after 9 pm at my location here in the Eastern US is totally dead. 40 is usable having heard voice communications from South Africa, Europe, and even Australia during the late evenings about midnight and thereafter. Even 75 meters has been dead in spots throughout the night and early morning. Sometimes the band goes long and sometimes short. You may have a guy living 100 miles from you that you cannot hear, yet someone 600 miles may be copied easily.

I know that I worked Europe on 40 recently around 7155 or so up through about 7170. 20 meters has been totally crap after say 8 pm. There were some Russian stations on there the other night and some South American DX stations. Africa is nil right now except Mali and South Africa.

Contact the FCC and tell then you are getting RF interference. Explain
the nature of the problem and give them contact information for the
Power company. Plus if you can supply any other documentation about your
problem it may come in helpful. The Commission has been in the process
of raising cain with the power providers due to a lot of interference
problems being caused by utilities. If you check, the enforcement
letters site on the ARRL you'll notice that. Hope this helps.

I spent (13) months there way before it became a large base in the mid
70's. We were able to visit the entire island checking out the older
side. The island at one time was a prison where England sent their
undesirables to live and produce copra(?sp). In the medical clinic there
was till meds in bottles,etc. Later in the they completly closed off
that side of the island. As a 19 yearold right out of radio school it
was fantastic place to be, for about 4 months then the heat, sand,
nothing to do would get to you, we worked 12On/12Off for most the time.

But 1khz is all you need for proper signal resolution in AM mode. In
ssb the finer tuning is needed and available with a bfo knob. Or on
the more advanced receivers a product detector and 100hz or 10 hz will
do.

Better and multiple filters come at a price.

There's a huge mismatch except on the frequencies where your wire is
resonant. Those probably total 2 or 3 in the entire HF band.
Otherwise the mismatch will eat most of the signal. Plus, your wire
will be feeding all manner of static electricity into your receiver.

A dad walks into a market with his young son. The kid is holding a quarter coin. Suddenly, the boy starts choking, going blue in the face. The dad realises the boy has swallowed the coin and starts panicking, shouting for help.

A well dressed, attractive, but serious looking woman in a blue business suit is sitting at a coffee bar in the market reading her newspaper and sipping a cup of coffee. At the sound of the commotion, she looks up, puts her coffee cup down on the saucer, neatly folds the newspaper and places it on the counter, gets up from her seat and makes her way, unhurried, across the market. Reaching the boy, the woman carefully takes hold of the boy's testicles and starts to squeeze, gently at first and then ever more firmly.

After a few seconds the boy convulses violently and coughs up the money, which the woman deftly catches in her free hand. Releasing the boy, the woman hands the coin to the father and walks back to her seat in the coffee bar without saying a word.

As soon as he is sure that his son has suffered no lasting ill effects, the father rushes over to the woman and starts thanking her saying, "I've never seen anybody do anything like that before, it was fantastic. Are you a doctor?"

"No," the woman replies. "I work for the Internal Revenue Service."

That was what I was thinking. I guess I'll have to dust off the ANC-4.
So the built-in whip won't do the job?

I have some Jfets someplace. I suppose I can do a DIY active just to
try it out.

BTW, I noticed Wellbrook change the polarity of the power supplies
going to their amps. Mixing and matching wellbrooks could be nasty if
you are not careful. When I use the Wellbrook on the road, i.e. in a
car, I leave the power supply end of the box in a ziplock bag to avoid
the hot 12V on the BNC from hitting the auto frame.

The only place that still uses Soviet jammers is Cuba. Have you heard any Spanish on this frequency? It might be a Radio Marti or Radio Republica frequency (or former freq, as it takes the Cubans a while to realize that the station they're jamming is no longer there). I bet dxAce would know, ask him.

If he's hearing the jammers on or near 6100 during HIS afternoon and they are strong then I rather doubt that he's hearing the Cubans doing any jamming.

Propagation, propagation, propagation.

I imagine there may be some circumstance when the build-in whip will work,
but you're giving up so much flexibility in not using simply 2 antennas
that I wouldn't even try the build-in whip.

2 antennas always works, and works in addition on other things besides noise.
Like looking under the local MW station to see what's beneath.

990. Three Uses for the MFJ-956 Shortwave Antenna Pre-Selector / Tuner - Applies to most Pre-Selectors and Antenna Tuners

Newsgroup: rec.radio.shortwave
Date: 2006-04-09 21:16:30 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1144617390.449220.192790@t31g2000cwb.googlegroups.com>
Source record: 70195

David,

You bring up a good point. For those who do not Disconnect
their Coax Cable from their Radios when they are not in-use.

A device like the MFJ-956 can serve a purpose in that it simply
allows the user to switch the Antenna's Coax Cable from the
Radio's Antenna Input to Ground.

Also, the MFJ-956 has a "By-Pass" Switch Position and can
be switched-out when it proves to be in-effective for any
specific frequency and circumstance that one encounters.

Summary :
Three Uses for the MFJ-956 Shortwave Antenna Pre-Selector / Tuner :
[Applies to most Pre-Selectors and Antenna Tuners]

1 - IN-USE - Use the MFJ-956 when it appears to work
using your Ears as your "It's Working" Meter = Improves
your ability to Listen to the Radio and Hear a Signal.

2 - BY PASSED - Switch the MFJ-956 Out of the Circuit
[BYP] "By Passed" when your Ears (your "It's Working"
Meter) tell you that it is not doing anything to improve
your ability to Listen to the Radio and Hear a Signal.

3 - GROUNDED - Switch the MFJ-956 to Ground [GND]
when the Radio is turned "Off" and Not-In-Use to help
protect the Radio from nearby Lightening Strikes and
ESD build-up on your Antenna.

just my two cents worth - iane ~ RHF

For years, I've used my Radio Shack DX-360 and my Sangean ATS606A for SWLing but this changed for the most part after the 2004 hurricane season. Because I was so annoyed at not having any news sources during the often 24 plus hours without power here in Florida, after Hurricane Charley I bought a sand-colored Grundig FR-200 at Radio Shack for $40. This radio proved to be much more useful than any AC or battery powered radio that I've ever used. The construction is solid, the sound quality is excellent and the built-in LED flashlight and hand-crank made the power outages a little more bearable. Cranking the generator for a minute provided nearly an hour of good sound and the flashlight came in handy if the power ever went out at night and I didn't have immediate access to my regular flashlight or candles. Now after almost two years, this radio still works perfectly and the hand-crank still powers the same rechargeable battery pack as well as it did back then. I've cranked it for a minute almost daily since the summer of 2004 (its being semi-waterproof makes for a great bathroom radio) and it has yet to fail or fall apart, while the rechargeable battery pack still holds a good charge after all this time. More recently, I've started to use it for SWLing and found that barring the usual disadvantage of an analog display (not knowing the exact frequency I'm on is strangely thrilling at times), its quality easily rivals that of my more expensive Radio Shack DX-360 and my Sangean ATS606A. I highly recommend this fine little radio because it helped me through those dark days and nights in the summer of 2004 and has been a pleasure to use for DXing today.

Thanks for your concern. According to Colorado State's William Gray, the 2006 hurricane season will consist of 17 named tropical storms (an average season has 9.6), 9 hurricanes (average is 5.9) and 5 major hurricanes with winds exceeding 110mph (average is 2.3). In addition to all this good news, he calculates that there's an 81% chance that at least one major hurricane will hit the U.S. coast. So goes the easy living here in the Sunshine State!

I have a Sangean ATS-606A that's well matched to its cabinet that I
use when travelling. It will occasionally whistle so I know that it's
got some bandwidth (has a ''fine tuner'' so I can tune away from the
adjacent.)

At home the cheapest thing I listen to MW on is a Drake SW2 (kitchen).
I also have an ICOM R75 in the bedroom and a Drake R8B in my office.

I can't stand inferior AM radios.

Trust me, Bosco. When big business finds a way to cut costs they
rarely pass the savings on to the customer. The wider margins go
straight to the shareholders.

Where are you located? I am in Martin County, Hobe Sound and I am
also hearing this hurricane season will be just a bad or worse. I
have two portables with batteries, an RF-2200 and a DX-440. I use my
old S-38 a lot for BCB DX and am getting a Lafayette HE-10, love the
old boatanchors.

I want to get a grundig S 350, but I have heard bad things about this radio from other SWL listeners , and I wanted to try it out for myself to see what I can receive on it also to see for my self what it it really is . Is it really true that the Grundig S350 is a bad radio or is it a good radio. Where can I find deeper reviews about this radio? Is it best that I should try it for 30 days? I also heard that there were improvements with the Deluxe version. Best regards.

That's not on topic. What would be on topic would be if Bush was planning to jam Cuba's and Iran's SW broadcasts to the US. It would also be just about as likely to happen.

Mine is a good AM/FM radio, a fair cheap SW radio. The tuning has a
tendency to drift, but battery life is excellent and sound is good. I
have no complaints about it.

I think Seeing Eye Dog is right and that David is that Dennis Justin Raimondo guy. He's gay, he claims to be Republican while spewing far left crap, he's the right age, almost everything matches. The article that Seeing Eye Dog referenced says that Raimondo lives in San Francisco, but that article is apparently several years old, and Raimondo certainly could have moved to LA within the last few years. We don't know if Raimondo is an active shortwave and satellite radio listener, but if he is then the case would be open and shut IMO. Hi Dennis, you're ugly and old and couldn't get a teenage boy even if you paid for one. :)

I don't think you'll be able to do both. Check the obvious stuff, like
is some scan feature or fast tuning enabled (I don't know the 7700 so I
don't know what you might push on it). If that doesn't work, send it to
Yaesu in California. yaesu.com for the address, notice that they're now
owned by Vertex or somebody like that. Last time I had my 8800 in for
service, it was a reasonable cost, but they kept it for several months
and I had to keep calling and harassing them to get my radio back.
Things may be better under the new owners, I don't know, but the trimmer
caps on my 8800 blew and screwed up the PLL so it will be going down to
LA as soon as I get the money.

I think the problems started once Sangean switched manufacturing to the Chinese mainland. Sangean is a Taiwan company, and due to the bitter relations between the CCP and the socalled "renegade province" Chinese companies are out to screw over any Taiwanese who invest in China. It wouldn't surprise me if the Chinese subcontractor DELIBERATELY builds the Sangean radios poorly, on Party orders, so that Sangean and by extension Taiwan looks bad. Note that Sangean doesn't put "Made in China" on any of their radios because of the China-Taiwan bad blood. If you have to buy Chinese, buy a radio that doesn't come with 60 years of added baggage, such as Tecsun or Degen.

Dear Mike,

My ATS-808A (purchased in 1997) and my ATS-606AP (purchased in 1998) were both made in Taiwan. My CC Radio (made in China) was purchased in 2003. Poorly made all.

It's quite possible that in seventeen years Sangean's quality has gone down. Certainly that has been my experience.

I personally will never again buy any Sangean radio.

Best,

Joe

Dear David,

As far as I am concerned, NO currently-available SW radio sounds good with its built-in speaker with the exception of the Satellit 800.

I use an inexpensive ($29.95) RCA (Radio Shack Cat. # 40-5000) speaker with my AR7030 Plus. This sounds quite good on news/talk shows. For music, I run the sound through my stereophonic system which consists, in part, of Hafler electronics (pre-amp and amp) and a pair of Klipschorn speakers. The sound thus afforded has to be heard to be believed. The AOR used via my stereo system sounds much better than the Satellit 800 run through the same system, but as for the built-in speaker, the Satellit 800 wins hands down.

Frankly it has always been my thought that shortwave radios should eschew having built-in speakers just as in the "old days" and let the user buy either a "matching" external speaker (made by the radio manufacturer) or an "aftermarket" one - the buyer's choice. An external speaker, properly enclosed and baffled, will ALWAYS sound better than one built into a radio though, as I said previously, the sound from the Satellit 800"s speaker is pretty darned good. You can listen to it for hours on end. I know of no other shortwave radio about which I could say the same.

Best,

Joe

I have owned two of these radios and both ended up being returned because the sound volume knob started to get noisy after only a few months of daily use. I used the radio at my office and it was never exposed to dusty or damp conditions. To repair the radio would have cost me more for shipping to Toronto Canada and back than I thought the radio was worth. It's too bad, because I agree with everything else you said about this radio. It's a great little portable with a convenient handle on top plus it's very good on batteries. I'll bet there a lot more of these radios suffering the same problem I experienced, but because they are usually kept in a closet for limited emergency use, users will rarely discover the defect.

It's too bad this simple little radio couldn't be made with slightly better components. At one time I was tempted to get an Eton FR300, but this experience has soured my taste for this radio model family. I hope someone at Grundig/Eton will come across this post!

I also own a Tecsun BCL3000 (who manufactures for Grundig) and it works as well as I expected it to. It gets used daily and the sound volume knob operation is smooth and quiet. I would recommend this radio as a very good emergency radio. Easy on batteries and very sensitive.

So it sits in one of the lobes of the loop, like in the above pdf? That
is, the loop and whip would be in the same plane.

Not sure which question this is.

The whip is vertical to receive vertical electric field, the loop also
vertical (on edge) to receive the horizontal magnetic field. That there's
a particular handedness in the relation of the E and M fields is what allows
the whip to resolve which direction the signal is coming from.

As to the distance between them, it actually doesn't matter, operationally.
But it works fine if they're close together, ``close'' meaning relative
to a wavelength at the frequencies you're interested in.

That the deal works when they're close is the whole advantage of loop + whip,
since it takes no real estate.

Two whips separated by a quarter wavelength or more can achieve the same effect,
but at MW that's a lot of distance.

Except for unstable signals (bad skywave wobble), probably having the antennas
close is preferred. The effect is that you can't get any null whatsoever otherwise.

That is what I visualized. However, not referring E or H, but just a physical plane, the loop and whip are in the same plane. That is, you could draw the loop and whip on a piece of paper and the orientation would be correct. Then visual the paper standing vertically. If you looked at the paper from the edge, that would be the direction of the antenna.

This is kind of tough to do verbally.

I am a grundig fan, but they do not make the best receivers on the market.

AOR 7030 is my favorite, and for longer listening when reception conditions are good the Lowe HF 150 is my favorite. The HF 150 is used with the audio unit SP 150 and a hifi speaker from grundig.

My one (overall) episode with the IRS was eventually a positive one. Once upon a time, I *guess* I was subject to some kind of review in which, about two years after the fact, the IRS had determined that some form of retirement recompense I had received was subject to taxation (they could have been right - I was only about 29 years old, and was uncertain as to whether that original fund I had received was properly reported - I thought it was at the time). After reviewing the information they had given me, I sent them the back taxes they claimed I had owed, with some small penalty (a few percent interest, I guess). It amounted to about $600.

Two years later, I got a check from them for more than $1,000, with a note explaining what had happened. No apology, but to my benefit about $400. 15 years later, I have not heard from them again, and I have not been audited. The laws may suck, and they may bungle it occasionally, but I have always been treated fairly by the IRS. I believe that most of the people who complain are those who try to evade tax laws and wind up getting nicked.

>Yeah, thanks. I'd seen this option, but haven't tried the 541. I'm
>trying to avoid inside antennas. The Select-A-Tenna website implies
>you'll be amplifying at least some of the inside noise.

It can be rotated to null out both inside and outside noises. It works
extremely well on weak stations, but ONLY if they are well in the
clear, and not close to some station that is near in frequency and

direction to the station you're trying to receive. That's the main downside of the critter, I've found. It probably works better in rural locales where stations are sparse and spread out on the dial.

Also, the Select-a-tenna is AM only.

Thanks for this, Frank. It is more than I can possibly digest, but I
think I get the general drift of it. Until the populace at large
conducts a general uprising to its elected officials, I doubt if the
types of situations outlined in this treatise will be eliminated. I
understand the concern over lack of actual legality in collecting a
tax; but, my main point was that the IRS has always treated me fairly
within the scope of its operations, and that most of the time, when I
hear of people being taken to task for their tax trangressions, it's
usually because they didn't pay according to schedule.

I do not contest that the authority to collect tax may not exist at
all. In fact, I make no statement on it one way or the other, because
I am not an attorney.

Yep. That's Irwin Schiff for ya. His attorneys filed a diminished capacity defense on his behalf. I don't know if Irwin's stint on WWCR was entered as evidence of his mental stability.

I don't think Irwin Schiff is an attorney either, but he is quite expansive with his advice. One of the advised was convicted and Schiff was quoted as saying:

"If I told him to go rob a bank, would he do it? What is he, an idiot?"

I doubt that there is one "favored" model, but here's my $.02:

I keep a Midland SAME weather radio (model WR-300) at home. For travel, handheld scanners that cover police/EMS freqs as well as NOAA wather channels are useful if you're so inclined. Also several amateur radio handhelds (can only be used for transmitting if you're a licensed radio amateur) cover NOAA weather channels. FRS/GMRS walkie-talkies sometimes include weather channels as well.

BTW, if you're not already a license amateur radio operator (ham), consider getting your license. The Technician class (no Morse code knowledge required) can be obtained by successfully passing a written 35 question exam, and allows local communications via simples or using repeaters for more coverage. A very useful tool for survival situations when the grid goes down, and a fun hobby, too.

I got one a couple of years ago, and like it really well. The tuning is analog with a digital readout, so there is some drift that diminishes after the radio has warmed up for an hour or so. I understand later models have reduced this drifting.

The audio quality is very good, with adequate sensitivity and selectivity. It is prone to images and overloading, but that is to be expected with a radio in the price range (sub $100 - got mine on sale at Macy's for $65 or so).

>
> - Matt

Thanks to everyone in this group who offered suggestions! Here's my plan
now.

I will write an official notary public stamped letter to Pedernalis Electric
Company detailing my complaint. I will basically start over from there
collecting evidence and recording it in a form that will hold up in a court
of law. I will see how PEC responds to this "official complaint" and
document everything they do or don't do, complete with statements from
folks I talk to, that work at that utility company. If they sill fail to
correct the issues they have with their equipment illegally radiating RF
radiation, I will use all of the information I have collected since I wrote
them the official complaint, to the FCC - complete with the best evidence I
can provide.

In the meantime....

I have found a *workable* solution for me.

It seems like my 20M dipole is more susceptible to man-made interference than my 40M dipole because its sloping angle is closer to vertical. I played around yesterday and found that I can "get by" by using my 40M dipole just for receiving on 20M and my 20M dipole only for transmitting. There is indeed much less of this power line noise received on my 40M dipole when I use it to listen on 20 meters - but its still s6 sometimes even on the 40M dipole. Also, I have to get in the habit of manually switching the antenna switch between xmit/rcv. Its a pain in the butt, but at least I can still do HAM operating. I haven't tried much SWL yet like this, yet.

ps - what a pain in the ass

1075. Grundig S350 -or- Eton S350 DL AM/FM {Shortwave} "Superadios" - The Good and The Bad . . .

Newsgroup: rec.radio.shortwave
Date: 2006-04-10 18:08:20 UTC

Source record: 70333

Adam E.,

The Grundig S350 is what it is - an AM/FM Radio with the
Shortwave Bands thrown-in for good measure. It is best
used as a Broadcast Program Listener's (BCL) Radio for
the AM and FM Bands. Sensitive enough on AM to Receive
a lot of AM Stations -and- Good enough Sounding on FM
to Listen to Music Programming.

Here are a few Messages posted here on RRS to read :

See if you can find one with a hand crank. Otherwise the weather
radios with the advanced warning capabilities, I have the Midland and
the CCRadio, will run down their batteries in two or three days if the
warning system is left on, so they have to be hooked up to AC. So find
one with a hand crank; if you can't, get a standard am-fm with a hand
crank -- those stations willl pass on the weather to you.

Let me clarify for the thinking impaired (not Bob the OP) that they may
have an electronic version such as a PDF that Ten-Tec may not charge you
for as printing and mailing costs money for the hard copy. It would be
worth the time to ask them.

You will note the programmers manual is a free PDF in the link above.
You might find that in the process of explaining and describing the
programming commands it might help you out with the manual operation.

I was wrong.

<''The Railroad Commission of Texas is the state agency that regulates
the oil and gas industry, gas utilities, pipeline and rail safety,
safety in the liquefied petroleum gas industry, and surface coal and
uranium mining. Established by the Texas Legislature in 1891, the
commission is the state's oldest regulatory agency.

As is suggested by its name, the Railroad Commission was initially
created to regulate railroads, terminals, wharves and express
companies within the state. Pipelines were added to the commission's
jurisdiction in 1917, followed by the oil and gas industry in 1919 and
gas utilities in 1920. It does not have jurisdiction over public
utility companies; that falls under the jurisdiction of the Public
Utility Commission of Texas.''
<A tariff is a schedule of prices or terms of how a product is sold,
as in an electricity tariff published by an electric utility or
electricity retailer. This would typically list the prices (or rates)
for various services or components of the service such as: the service
charge, time of use energy (kWh) charges and, for demand, (kW)
charges.

both via wikipedia

1094. Grounding Bar Length ?

Newsgroup: rec.radio.shortwave
Date: 2006-04-10 20:44:58 UTC
From: Robert11 <rgsros@notme.com>
Message-ID: <yK-dnQEYidRaXqfZRVn-uA@comcast.com>
Source record: 70252

Hello:

Just started to string up the new listening only antenna I purchased from PAR.

As there is a Balun between the start of the wire antenna, and the coax feeding the receiver, a ground bar is apparently required.

Am using the typical eight foot long,5/8" diameter Cu plated steel that I guess is fairly typical for house AC power grounding.

Querstion: At my age, it's a bit of a problem pounding in the six or seven feet that is commonly mentioned as the "required" length. Certainly, the more the better, I guess, but what wqould be a reasonable length into the ground ?
How about 4 to 5 feet ? Again, it's for receiving only.

Thanks,
Bob

Needing a BALUN or UNUN depends on the antenna type. Some antennas are
close to the coax impedance and do not need a transformation.

You are talking about putting up a wire type antenna so you could
probably use a 9:1 ratio UNUN.

I think it is overall a good radio. Radio Shack sells them so go on over
and play with one yourself.

Better than nothing. Just do the best you can with the rod. Some people use copper pipe and attach a hose fitting on the top end. Turn on the water and you have a low speed water drill. Depending on the soil in your area that may work well or not. Another suggestion is to get a youngster in the family to pound it in for you.

Don't notarize it, that just looks silly. Notarizing is for documents
where the recipient might have reason to wonder whether you are who
you say you are.

I use a piece of coat hanger with the wire wrapped on one end that I scarped off, and the other end is shoved in as far as I could get it to go with that end scraped clean too.

I have an Oregon Scientific WR196T (no longer made). Nice radio if
you don't need to use it on batteries; it would use less power if
it had vacuum tubes.

If possible, find one that will let you select not only by warning
area but also by warning type. I shut mine off permanently when I
was awakened twice in the early hours by a WATCH that was never
alerted when it first came out and I was awake. Nowadays you'd also
have to shut out the "amber alerts".

My main weather radios are:

1. Yaesu VX5R handheld transceiver (a basic amateur radio license required
if you're going to use it to talk as well as listen); and
2. Radio Shack Pro-95 scanner. This has an alert function that sounds an
alarm if a weather emergency is spotted in my area.

I would not worry a whole bunch about the ground rod's length if you are
just listening. Use what you have, and get it down into the ground as far as
you can. See if you can get a youthful neighbor type to help out?

From what I understand, these radios have come down in price recently. Passport gives it a modest star rating, but it also gives this receiver a "Passport's Choice" plug, mostly on account of its very good sound. I understand the drift problem has been fixed in the recent versions of this receiver.

With the lower price and better performance, it might make a nice, inexpensive addition to your shack.

>
> - Matt

I should mention that there's an art to nulling with the ANC-4. Persist and you will succeed.

Basically you're searching for a sweet spot in a plane.

With the gain at 0, you're at 0, call it, a place on the plane.

The gain knob moves you away from 0, in the direction indicated by the phase knob.

Thus with the gain fixed, you sweep out a (half) circle with the phase knob; if you push a button, it reverses a polarity and you get the other half of the circle with the phase knob.

Somewhere along that circle might be the sweet spot you're searching for.

If not, try another gain and do it again.

Well. That would succeed but be very tedious.

Better is :

Set the gain to something (start with something that gives about equal signal in the two antennas, which you can discover by turning each off alternately)

Then tune the phase for a minimum of what you're trying to minimize.

Now tune the gain for a minimum of what you're trying to minimize.

Repeat these two steps.

Still not a good minimum? This is where most people give up.

The secret to success is SUCCESSIVE OVERRELAXATION :

instead of tuning to a minimum, tune SLIGHTLY PAST minimum.

That usually works.

What's happening is that the gain and phase are coupled strongly, giving a long thin valley that you have to follow to its minimum. Successive over-relaxation lets you shoot out of the walls of the valley somewhere, so that your steps are no longer infinitely small as you zigzag down the valley.

(Partly the gain and phase are coupled strongly because the ANC-4 uses linear pots, whereas the phase one should be linear in power, not voltage, to make a circle.)

Anyway don't give up. There are techniques you can learn to get good minima out of the ANC-4. It really does work.

"In the first place we should insist that if the immigrant who comes here [legally] in good faith becomes an American and assimilates himself to us, he shall be treated on an exact equality with everyone else, for it is an outrage to discriminate against any such man because of creed, or birthplace, or origin. But this is predicated upon the man's becoming in very fact an American, and nothing but an American."

"There can be no divided allegiance here. Any man who says he is an American, but something else also, isn't an American at all. We have room for but one flag, the American flag, and this excludes the red flag, which symbolizes all wars against liberty and civilization, just as much as it excludes any foreign flag of a nation to which we are hostile...We have room for but one language here, and that is the English language...and we have room for but one sole loyalty and that is a loyalty to the American people."

- Theodore Roosevelt, 1919

If you are an illegal alien you are a criminal pendejo.
By U.S. Immigration Law a criminal pendejo can never be granted any type of visa.

Don't forget to protest U.S. Immigration LAW on Communist Labour Day with Larry "Nativo" Lopez
http://www.discoverthenetwork.com/individualProfile.asp?indid=2033
and all his illegal pendejos
http://www.freerepublic.com/focus/f-news/1606273/posts

International Socialists and Communists high-jacked May Day as their primary holiday. http://en.wikipedia.org/wiki/May_Day

Neo-Kommunist Moonbats are also behind today's propaganda events:

Monday, April 10 is being billed as a "National Day of Action & Rally for Immigrant Rights" by a large network of open borders organizations that will hold separate demonstrations in 16 states and the District of Columbia. Their declared agenda is to "stop the anti-immigrant House Resolution 4437," "stop all attacks against immigrants," and "stop [the] criminalization of immigrant communities." Their demands include "a path to citizenship, not a temporary guest worker program"; "family reunification measures"; "worker protections"; and "full rights for immigrants!" (emphasis in original)

One of the organizers of these rallies is the Peace No War (PNW) Network, a self-described "collective of antiwar/peace and social and economic justice activists" whose mission is to "struggle for peace and justice across the World" via "community outreach and broad global mobilizing." PNW

pledges its support for "activist communities" whose goal is "to unite inner-city youth and immigrant and antisweatshop activists" in joint ventures, and to draw attention to how America's prosecution of the Iraq War is allegedly harming immigrant and minority communities all over the United States - by siphoning needed resources away from social welfare programs and into military projects.

PNW is a member group of the National Immigrant Solidarity Network (a pro-amnesty, pro-open borders organization) ; the ActionLA Coalition; and the United for Peace and Justice anti-war coalition, which is led by Leslie Cagan, a longtime committed socialist who aligns her politics with those of Fidel Castro's Communist Cuba.

PNW is headquartered at 8124 West 3rd Street in Los Angeles, in a building dubbed the Los Angeles Peace Center (LAPC) . Funded by Aris Anagnos, the LAPC provides rent-free office space for dozens of loosely intertwined leftist groups. Anagnos is a Los Angeles real estate magnate who has spent more than three decades bankrolling Marxist causes around the globe -- from the Nicaraguan Sandinistas, to Marxist rebels in Chiapas, to Cuban dictator Fidel Castro. In addition to Peace No War, the LAPC is also the home base of Coalition for World Peace, and of the West Coast offices of Americans for Democratic Action, the Democratic Socialists of America, and the National Lawyers Guild.

http://www.discoverthenetwork.org/groupProfile.asp?grpid=7275

As far as the kind of treatment illegal immigrants from Mexico deserve, let' s treat them as Mexico treats all immigrants. According to the Center for Security Policy's J. Michael Waller, "Mexico deals harshly not only with illegal immigrants. It treats even legal immigrants, naturalized citizens and foreign investors in ways that would, by the standards of those who carp about U.S. immigration policy, have to be called 'racist' and 'xenophobic.'

"If you think these critics are mad about U.S. immigration policy now, imagine how upset they would be if we adopted an approach far more radical than the bill they rail against which was adopted last year by the House of Representatives - namely, the way Mexico treats illegal aliens."

For example, according to an official translation published by the Organization of American States, the Mexican constitution includes the following restrictions:

Pursuant to Article 33, "Foreigners may not in any way participate in the political affairs of the country."

Equal employment rights are denied to immigrants, even legal ones. Article 32: "Mexicans shall have priority over foreigners under equality of circumstances for all classes of concessions and for all employment, positions, or commissions of the Government in which the status of citizenship is not indispensable."

Jobs for which Mexican citizenship is considered "indispensable" include, pursuant to Article 32, bans on foreigners, immigrants, and even naturalized

citizens of Mexico serving as military officers, Mexican-flagged ship and airline crew, and chiefs of seaports and airports.

Article 55 denies immigrants the right to become federal lawmakers. A Mexican congressman or senator must be "a Mexican citizen by birth."

Article 91 further stipulates that immigrants may never aspire to become cabinet officers as they are required to be Mexican by birth. Article 95 says the same about Supreme Court justices.

In accordance with Article 130, immigrants - even legal ones - may not become members of the clergy, either.

Article 27 states, "Only Mexicans by birth or naturalization and Mexican companies have the right to acquire ownership of lands, waters, and their appurtenances, or to obtain concessions for the exploitation of mines or of waters."

Article 11 guarantees federal protection against "undesirable aliens resident in the country." What is more, private individuals are authorized to make citizen's arrests.

Article 16 states, "In cases of flagrante delicto, any person may arrest the offender and his accomplices, turning them over without delay to the nearest authorities."

According to Article 33, "the Federal Executive shall have the exclusive power to compel any foreigner whose remaining he may deem inexpedient to abandon the national territory immediately and without the necessity of previous legal action."

I have an Eton FR300.

xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxx

All-in-one self-powered radio

eton FR300
AM/FM Radio with NOAA, TV-VHF, Flashlight and Cell-Phone Charger

This all-in-one unit offers functionality and versatility that makes it
ideal for emergencies. The FR300 provides you with radio, light, and cell
phone battery life when you need it most. The Hand-Crank Power Generator
charges the internal rechargeable Ni-MH battery pack. With the NOAA weather
channels and TV-VHF channels, you can find weather forecasts or listen to TV
shows when you're away from the set. Available in: Orange, Red, Black, Blue,
Silver

xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxx

I kind of like it.

Guy

That frequency list and the listening advice is too inspecific for me.
I prefer www.primetimeshortwave.com and www.hfradio.org .

1118. Ground Rod - How Deep ? - Installing a Ground Rod - One Day at a Time !

Newsgroup: rec.radio.shortwave
Date: 2006-04-11 00:30:55 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1144715455.092543.183170@e56g2000cwe.googlegroups.com>
Source record: 70275

Robert 11,

Ground Rod - How Deep ? - As Deep As You Can Get It !

Big Tough Jobs are made easier - - -
If they are done in small steps.

[Installing a Ground Rod - One Day at a Time !]

1. Take a Post-Hole Digger and dig-down a foot
or two to start you Ground Rod Hole.

2. Add a Dry Mixture of 6 Oz Epson Salt and
3 Oz. Copper Sulfate to the Bottom of the Hole.
Then Wet (Soak) the earth (dirt) at the Bottom of
the Hole for a day or two to soften-up the ground.

3. Place your Ground Rod into the center of the
Bottom of the Hole and pound-away as much as
you can and then attach your Clamp and Wire.

4. Add a Dry Mixture of 6 Oz Epson Salt and
3 Oz. Copper Sulfate to the Bottom of the Hole.
Then Wet (Soak) the earth (dirt) at the Bottom of
the Hole for a day or two to soften-up the ground.

5. Come back in a day or two or may be a week and
Remove the Clamp and Wire and again pound-away
a little more. Re-Attach the Clamp and Wire.

6. Add a Dry Mixture of 6 Oz Epson Salt and
3 Oz. Copper Sulfate to the Bottom of the Hole.
Then Wet (Soak) the earth (dirt) at the Bottom of
the Hole for a day or two to soften-up the ground.

7. Come back in a day or two or may be a week and
Remove the Clamp and Wire and again pound-away
a little more. Re-Attach the Clamp and Wire.

REPEAT - The above steps as needed to get your
Ground Rod about Seven Feet (7') into the ground.

NOTE - Eventually you will have about 6" to 8" of
Ground Rod above the surface of the ground and
that is good enough.

8. Fill the Hole with a mixture of 50% of the
original soil and 50% Bentonite.

READ - Great Ground with Kitten Litter [Bentonite]
- by Guy Atkins on HCDX - August 10, 2000
http://www.hard-core-dx.com/nordicdx/antenna/ground/bentonite.html
Bentonite is great for getting an excellent conductive ground.

There comes a time when you have to stop being silly and wake the fuck
up.

Political scientist Dr. Lawrence Britt recently wrote an article about
fascism ("Fascism Anyone?," Free Inquiry, Spring 2003, page 20).
Studying the fascist regimes of Hitler (Germany), Mussolini (Italy),
Franco (Spain), Suharto (Indonesia), and Pinochet (Chile), Dr. Britt
found they all had 14 elements in common. He calls these the
identifying characteristics of fascism. The excerpt is in accordance
with the magazine's policy.

The 14 characteristics are:

Powerful and Continuing Nationalism
Fascist regimes tend to make constant use of patriotic mottos,
slogans, symbols, songs, and other paraphernalia. Flags are seen
everywhere, as are flag symbols on clothing and in public displays.

Disdain for the Recognition of Human Rights
Because of fear of enemies and the need for security, the people in
fascist regimes are persuaded that human rights can be ignored in
certain cases because of "need." The people tend to look the other way
or even approve of torture, summary executions, assassinations, long
incarcerations of prisoners, etc.

Identification of Enemies/Scapegoats as a Unifying Cause
The people are rallied into a unifying patriotic frenzy over the need
to eliminate a perceived common threat or foe: racial , ethnic or
religious minorities; liberals; communists; socialists, terrorists,
etc.

Supremacy of the Military
Even when there are widespread domestic problems, the military is given a disproportionate amount of government funding, and the domestic agenda is neglected. Soldiers and military service are glamorized.

Rampant Sexism
The governments of fascist nations tend to be almost exclusively male-dominated. Under fascist regimes, traditional gender roles are made more rigid. Opposition to abortion is high, as is homophobia and anti-gay legislation and national policy.

Controlled Mass Media
Sometimes to media is directly controlled by the government, but in other cases, the media is indirectly controlled by government regulation, or sympathetic media spokespeople and executives. Censorship, especially in war time, is very common.

Obsession with National Security
Fear is used as a motivational tool by the government over the masses.

Religion and Government are Intertwined
Governments in fascist nations tend to use the most common religion in the nation as a tool to manipulate public opinion. Religious rhetoric and terminology is common from government leaders, even when the major tenets of the religion are diametrically opposed to the government's policies or actions.

Corporate Power is Protected
The industrial and business aristocracy of a fascist nation often are the ones who put the government leaders into power, creating a mutually beneficial business/government relationship and power elite.

Labor Power is Suppressed
Because the organizing power of labor is the only real threat to a fascist government, labor unions are either eliminated entirely, or are severely suppressed .

Disdain for Intellectuals and the Arts
Fascist nations tend to promote and tolerate open hostility to higher education, and academia. It is not uncommon for professors and other academics to be censored or even arrested. Free expression in the arts is openly attacked, and governments often refuse to fund the arts.

Obsession with Crime and Punishment
Under fascist regimes, the police are given almost limitless power to enforce laws. The people are often willing to overlook police abuses and even forego civil liberties in the name of patriotism. There is often a national police force with virtually unlimited power in fascist nations.

Rampant Cronyism and Corruption
Fascist regimes almost always are governed by groups of friends and associates who appoint each other to government positions and use

governmental power and authority to protect their friends from accountability. It is not uncommon in fascist regimes for national resources and even treasures to be appropriated or even outright stolen by government leaders.

Fraudulent Elections
Sometimes elections in fascist nations are a complete sham. Other times elections are manipulated by smear campaigns against or even assassination of opposition candidates, use of legislation to control voting numbers or political district boundaries, and manipulation of the media. Fascist nations also typically use their judiciaries to manipulate or control elections.

4 or 5 feet, for receiving, will be fine.

Other possibilities -- I can only go down a foot or so here -- I drove
a short length of copper pipe into the ground, and attached a couple
of 70 foot wires, buried an inch or so below the lawn.

Another idea, just dig a shallow ditch, and lay your rod in it
horizontally. For receiving, you don't need a super-duper type RF
ground unless you're gathering massive amounts of RF out of the
ether...

There are also some ideas at the Polyphaser site, in the amateur radio
tech papers.

He said "Soviet style jammers", and the only place that still uses
Soviet jamming technology is Cuba, AFAIK. Ace didn't think that the
Cuban jammers could be heard in Europe during Euro afternoons (morning
in Cuba) because of the daylight path, but anything's possible. It's
possible that he means the Korean jammers, which would be more likely,
but I assumed that the North Koreans were using Chinese technology.

One of the Grundig or Kaito hand crank AM/FM/Shortwave radios. I've found the local all news station to be far more up to date on forecasted weather and at least equal to radio originated tornado warnings. And the voice over radio is far more pleasant than the annoying mechanical voice of the NWS broadcast.

1129. (OT) : The Loses and Costs of Illegal Immigrants

Newsgroup: rec.radio.shortwave
Date: 2006-04-11 02:03:08 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1144720988.735520.30000@i40g2000cwc.googlegroups.com>
Source record: 70286

(OT) : The Loses and Costs of Illegal Immigrants

* Lost Jobs for American Citizens
- Some Jobs done by Illegals would go undone.
- Some Jobs done by Illegals would be done by
Americans at a Higher Salary with the Payroll
Taxes being Paid by both the Worker and Employer.
- 11 Million Illegal Immigrant Workers could easily
translate to 5-6 Million Jobs for Americans at the
lowest end of the economic scale. {Hire Americans First}
- Fewer Jobs but Higher Paying Jobs for American
Citizens.

* Lost Federal and State Income Taxes
- Under-the-Table Illegal Immigrant Workers
paid in cash do not pay taxes.
- Employers do not pay the minimum wage.
- Illegal Immigrant Workers depress the local
Wage Scale for American Workers.

* Lost Federal Social Security PayRoll Taxes.
- Under-the-Table Illegal Immigrant Workers
do not pay their Share of PayRoll Taxes.
- Employer's of Under-the-Table Illegal Immigrant
Workers do not pay their Share of PayRoll Taxes.

* Lost Federal Medicare PayRoll Taxes.
- Under-the-Table Illegal Immigrant Workers
do not pay their Share of Medicare Taxes.
- Employer's of Under-the-Table Illegal Immigrant
Workers do not pay their Share of Medicare Taxes.
- Local Government Medical Facilities are being
Bankrupted by the Cost of providing Medical Care
to Illegal Immigrants.

* The Cost of providing Government Social Services
to Illegal Immigrants by Cities, Counties and States :
- Schools and Education
- Hospitals and Medical Care
- Enforcement of Immigration Laws for Guest Workers
and Illegal Immigrants : Police, Courts and Jails
- Worker's Compensation for Injury, Disability and Death.
- Other Government Services provided.

* Undocumented Illegal Immigrants are a National
Security Risk to the Safety of the Nation.

GUEST WORKER {A Last Resort}
[Hire Americans First Policy]
Any "Guest Worker" Program should require the
Employer of a Guest Worker to Certify that an
American Citizen can not be found to do the Job.
Guest Workers could "Only" Claim One Tax
Exemption for Themselves as Individuals and
would get any overpaid taxes refunded "Only"
after they Filed a Yearly Tax Statement required
of All Non-US-Citizen Workers both Guest and
Illegal.
+ The Employer would have to Withhold and Pay
All Income and PayRoll Taxes for the Guest Worker
and Pay the Full National Minimum Wage.
+ PLUS Employer would Pay an extra 15% Guest
Worker Premium that would be designated to be
shared equally by the City, County and State of
Employment to help cover the Cost of Enforcement
of Immigration Laws Social Services and provided
to the Illegal Immigrants and Guest Workers.

HOLD EMPLOYERS RESPONSIBLE :
* Employers of a Guest Worker to Certify that an
American Citizen can not be found to do the Job.
* American Unions would have Legal Standing to
Challenge and all Employer Certifications for
Guest Workers.
* American Unions would have the Right to Organize
{Unionize} Guest Workers.
* Employers would be charged with a Felony for
Hiring Illegal Immigrants : Up to a Year in Jail and $10K
Fine for Each and Every Illegal Immigrant Worker.
* Employers would be charged with a Felony for
Not Withholding the Taxes and Paying the Taxes
for Guest Workers : Up to a Year in Jail and $10K
Fine for Each and Every Guest Worker Tax Failure.
Note - All Managers, Officers and Owners of any
Corporation or Partnership or Business would be
held Equally Responsible and Liable under the Law.
+ PLUS Employer would Pay an extra 15% Guest
Worker Premium that would be designated to be
shared equally by the City, County and State of
Employment to help cover the Cost of Social
Services provided to the Illegal Immigrants and
Guest Workers. WHY ? American Citizens and
Tax Payers should not have to indirectly subsidize
Employers who do not pay the Full Total Cost of
Employment in Taxes and Services paid for by Taxes.

ILLEGAL IMMIGRANTS ARE CRIMINALS [.]
A-Matter-of-Law : Being in the Country Illegally
must be a Felony; and Automatically Exclude the

Illegal Immigrant from being a Guest Worker.
1. The Right To Be Arrested As A Criminal.
* Point-of-Law : If You Can Not Prove That You
Are Here Legally - You Are Illegal under the Law.
2. The Right To Be Deported As A Criminal.
* 72 Hour Deportation Hearing - Prove That You
Are Here Legally within 72 Hours of Get Deported.
* Only One (1) 72 Hour Deportation Extension
under the Law due only to Sickness or Injury.
* Every Illegal Immigrant Arrested gets Finger
Printed, Photographed and DNA Collected.
* Federal Subsidy, including an Arrest and
Deportation Bounty, to Local Law Enforcement
for Enforcement of Immigration Laws with
respect to Illegal Immigrants and Guest Workers.

so say i - my opinions stated as facts ~ RHF

It depends on where I am at the time.... both of my trucks have HF and dual band (VHF/UHF) HAM radios, as does the house. They all work, and there is usually at least one on almost all the time. If the sky looks nasty and/or there is threatening weather forcasted(I check the Weather Channel at least twice daily), I run the dual banders on scan with the local repeaters programmed in, and turn the HF to either the 40m or 75m severe weather net frequencies.

most of the weather radio specs say something like they only guarantee the
digital SAME code to be accurately decoded 90 percent of the time.
With that in mind i would use a non SAME weather alert radio as my fall back
survival radio. The one that alarms on anything.

"One of the Grundig or Kaito hand crank AM/FM/Shortwave radios. I've found the local all news station to be far more up to date on forecasted weather and at least equal to radio originated tornado warnings. And the voice over radio is far more pleasant than the annoying mechanical voice of the NWS broadcast. "

I have found that the NWS broadcasts are MUCH more detailed with the information I need.

Most news stations have LOTS of talk and LITTLE information in my experience....when I turn my radio on in an emergency situation I want to hear information NOW to conserve power and time.

The FR200 is a nice little package (although I have had similar troubles
with the volume control to what someone else here posted-that is it becoming
noisy when turned up or down. I'm a tech though, and a shot of tuner
cleaner in the right place cleared it right up.) I got one after Hurricane
Alicia came though Houston a few years back, and left thousands without
power for up to two weeks (at which point batteries became an endangered
species.) And the first night I had it, I picked up Voice of Russia clear
as a bell, which is what actually got me into shortwave. I then found a
Radio Shack DX402 (I think, AKA Sangean ATS-505 I think.) for $20.00 and
discovered how nice a digital tuner is. Am now hooked on shortwave, and
recently bought a Sony 7600GR off of eBay for $85.00. It too has a minor
problem with the volume control (which is why it was cheap) but I can live
with it. With it hooked up to my 240' longwire, I can even pick up Voice of
Korea's 1300 (UTC) broadcast. Sooo nice. Currently building a rechargable
battery back, using a small permanent magnet DC motor and some odd

components to make the last two radios also operable off of a hand-crank. This device will be seperate from the radio however, and will only plug in to provice the 6 VDC they require. I did have this device working, but with plastic gears, and these died after a short trial run. Worked perfectly for a few seconds though... :) In the meantime I keep a pack of 48 AA batteries in .50 calliber ammo box along with the DX402. The FR200 lives in the back of the car, in an "emergency" crate. Oh, and yes, the batteries that come with the FR200 are really reliable. Once found the switch on the radio knocked into the "Batt" position, apparently having been there for some months. Definetly compromised the battery, thought I. Bought a new one, and tested it against the old one. Identicle performance. So now there's an extra NiMH battery in with the radio. Currently looking for an AN-LP1, but in no hurry... If I get savy enough, I'll try to build one.

Link: http://www.redsunelect.com/

Radios have an obvious Tecsun look to them. Maybe even made in the same
factory.

I have copied the images and pasted them below to avoid killing bandwidth.

http://img68.imageshack.us/my.php?image=20064719648169013yh.jpg
http://img134.imageshack.us/my.php?image=2006471972781757ti.jpg
http://img134.imageshack.us/my.php?image=20064719713446671ee.jpg
http://img68.imageshack.us/my.php?image=20064719721710569tp.jpg
http://img68.imageshack.us/my.php?image=417pz.jpg

Criticize* as you will, but no one in the USA seems to be making Shortwave
radios. They look *interesting* at least.

* Now try to tell me you don't have anything made in China.

DaviD - So... now 'you' are apologizing for Big Business :o)

DaviD - In Reality go to any Home Depot and look at the
Illegal Immigrants hanging around trying to Catch-a-Job.
- - - Books ! What Books ?
off-the-books is OFF-THE-BOOKS and Tax Free [.]

This points out another defect in any Immigration Bill.

LOCAL REQUIREMENT FOR LEGAL GUEST WORKER
HIRING HALLS FOR DAY LABORS :
A Federal Law Requiring that Cities, Counties and States
set-up Legal Hiring Locations for Day Labors so that
Their Legal Status Verified; Their Employment Tracked
and Taxes Collected from the Employer. Actually have
the Employers come into the Office and Sign-Up to
Hire a Guest Worker {Day Laborer} and Pay the Full
Total PayRoll Taxes and True Cost of Employment.
Put the True Cost of employment on the Employers
vice shifting the Expense to the American Tax Payers
as a Hidden Levy and Secret Subsidy to the Employers.
This would be paid for by the Employer's Guest Worker
15% Premium PayRoll Tax. {Hire Americans First}

ILLEGAL EMPLOYERS {PAYROLL TAX EVADERS} :
Any Illegal Employer found guilty of Hiring an
Illegal Immigrant or Guest Workers "Off-the-Books"
would be charged with a Charged with :
First Offense - A Misdemeanor with a flat $1K Fine.
Second Offense - A Misdemeanor with a Mandatory
10 Days-in-Jail and a flat $1K Fine
Third Offense - A Misdemeanor with a Mandatory
30 Days-in-Jail and a flat $3K Fine
Fourth Offense and there-after - A Felony Base on
Convections for #s 1, 2 and 3 above for Hiring Illegal
Immigrants or Guest Workers "Off-the-Books" with
a minimum of 180 Days-in-Jail not to exceed a Year
in Jail and $10K for each and every Offense.
Note - Local Agencies performing the Arrests would
retain 50% of All Fines; Counties 20% and States 20%
with 10% reserved for the Federal Government for
Program Administration and Reporting.
so say i - my opinions stated as facts ~ RHF

Buy a piece of pipe and a screw-on cap for it.

Put the pipe + cap over the end of the ground rod.

Hammer the rod in by pounding it with the pipe that you put on it,
just raising and lowering it down as hard as you want on the rod.

It can't slip off, and you control the weight you want to deal with
in the pipe that you use.

I'd recommend a fairly hefty weight of pipe.

Does a slinky antenna really work as a compact antenna?
IOW, does it perform as a 64 foot antenna rather than a 15 footer?

According to one of the gurus in the antenna group, it works as a fifteeen footer, or whatever length it's pulled out to. The steel wire also isn't as good as plain copper for conducting RF.

It's long been the rule that during a life-or-death emergency that any
person can use any frequency, any mode of transmission on any radio.
Transmitting for anything less than a life-or-death emergency is not legal.

Could someone help me out here? I'm looking for a website that I had once stumbled across... Some folks, I believe in North Carolina, who built and sold antenna masts for field applications. I believe that the masts were of the telescoping variety. I think they were made of PVC, too, rather than being of the fiberglass variety. It seems to me that they were also rather expensive. If I'm not mistaken, these products were sometimes sold on eBay (?); but I an not finding listings currently.

If anyone can help me out on this, I'd be most appreciative. I'd like to take a look at the products these fellows had on offer.

That's terrific, but not exactly a case for putting up a Slinky; an
equivalent length of penny-a-foot lampcord will work as well.

>Thats great advise! Thanks miso and Ron! I'm checking out this ANC-4 now.

If you've got a good junkbox, check out

Doug's Radio Noise Canceller Page at
<http://users.netonecom.net/~swordman/Radio/noise_cancel.htm>

I built one a few weeks ago, (after finding out that the ANC-4 costs $200,
new), as I had a problem with my neighbor's light dimmmers and have a
number of old air variable caps that I've been collecting for decades.

This is a passive noise bridge (out of an old ARRL book). It works
for me because I've got two antennas, one near the noise source that
picks up the problem at about S9+20, and a second antenna as far away
as possible where the noise at its worst (on 7 MHz) is about S5.

It's a whole lot more fiddily to operate than something like the ANC-4,
as you have to find tap on the coil and find the right spot on the two
capacitors and the level potentiometer(s). Get it set right, and the
dimmer noise goes away, at least for about 50 kHz around where you've
nulled it out.

But all it took was an afternoon to build the breadboard version.
Now all I have to do is get a case and some reliable switches and build
it for real.

I think most of them do 137-174ish Mhz.
The icom T2H sport is reasonable, works very well, & has ext Rx.

When I think of extended receive I think of a radio I can use to listen to AM on the aircraft bands at a minimum. For others it might mean the ability to listen to FM broadcasting or SSB on 20meters (a la the Kenwood TH-F6A and others).

It's southern Virginia not NC, and it's fiberglass not PVC, but Radio
Works has 33 foot fiberglass telescoping mast for like $75. I haven't
bought it, but I've bought other antenna stuff from them and was happy.

http://www.radioworks.com/

David posted a link to Fair Radio, which has top-quality mil-surplus
masts that roll up into a nice man-portable bag.

I would think that generally fiberglass would be preferred over PVC for
strength/weight.

Tim.

1190. Horizontal [Flat] Ground Rod Under-the-Lawn {Garden}

Newsgroup: rec.radio.shortwave
Date: 2006-04-11 19:56:21 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1144785380.957500.316590@u72g2000cwu.googlegroups.com>
Source record: 70446

Bob [K5QWG] -writes-
"Another idea, just dig a shallow ditch,
and lay your rod in it horizontally."

Horizontal [Flat] Ground Rod Under-the-Lawn {Garden}
[For "Receive Only" Shortwave Antenna & Ground Systems]
What To Do - When Pounding into the Ground is not possible
or permited.

For the Shortwave Listener (SWL) this is especially a good idea
if you have a Lawn {Garden} and an Automatic Sprinkler System
that keeps the Lawn's Ground Area 'moist' {Conductive} all the time.

Select an Area of the Lawn {Garden} where you can place your
"Buried" Ground Rod or Copper Pipe.

Carefully cut-out Eight (8) One-Foot-Squares of Lawn about 4"-6" Deep.
Place the Squares aside and wet and cover them until they are replaced.

Cover the Area around the cut-out Area of the Lawn and dig-out
a Trench about 6"-8" Wide and about 6"-8" Deep in the exposed
Soil {Dirt} so that the Bottom of the Trench is about 12"-18" Deep.
The Bottom of the Trench should be relatively smooth and level.

Cover the Bottom of the Trench with a 1/2" Layer of Bentonite {Kitty
Litter}.

Next add a thin even Layer of a Dry Mixture of 24 Oz Epson Salt
and 12 Oz. Copper Sulfate to the Bottom of the Hole.

Lay the Ground Rod {Pipe} in the center of the Bottom of the Trench.

Attach the Clamp and Wire to the Ground Rod {Copper Pipe}.

Add a second 1/2" Layer of Bentonite {Kitty Litter} to the Bottom
of the Trench.

Wet (Soak) the Soil, Bentonite and Salts at the Bottom of the Hole.

Re-Fill the Hole with the Soil that was removed from it and Wet
down the Soil and gentle Tamp-it-Down.

Carefully place the Removed Squares of Lawn back into the Area
that it was cut-out from and Wet down the Lawn and gently
Tamp-it-Down.

Caution - Ensure that the Ground Wire is Secure and Not a
Tripping Hazard where it leaves the Ground.

Question - Ground Rod of Copper Pipe for this type of Horizontal
[Flat] Grounding Set-Up ? - IMHO a Copper Pipe is the preferred
as it has more actual copper in it and the Solid Steel Core is not
needed to Drive the Ground Rod into the Hard Ground.

Tip - If this method of Under-the-Lawn Horizontal [Flat] Grounding
Set-Up is used two Copper Pipes can be Use and placed about
4"-6" apart in the same Trench at little extra cost and no extra work.

NOTE - If you are just installing a new Sprinkler System
for your Lawn or Garden - Then you should read :
Buried Copper Wire {Flexible} Ground Rod without a Hard Rod
http://groups.google.com/group/rec.radio.shortwave/msg/f1adcbeaaded1540

50 Feet of # 8 AWG Bare Copper Wire buried in the Trenchs can
be a very effective Grounding System for Shortwave Listeners
(SWLs) and not involve any extra work to accomplish.

hope this helps - iane ~ RHF

www.rigpix.com See that ADi AR-147 radio.About a year or so ago,I bought one just like it for two dollars (two dollars) at the Goodwill thrift store.It looks just like brand spanking new too,I doubt if it has ever been used before.It has the microphone and the mounting bracket with the little baggy of screws and it was still in the opened cardboard box,but no operators/owners manual.

I am sooooo slowwww and lazyyyy nowdays.I haven't gotten around yet to checking out the radio to see if it works.I realize I would need to buy a balun and a proper antenna for the radio before I connect it to a battery (car battery) and turn it on.Maybe pretty soon I will get one of the Hams around here to check out the radio for me. www.google.com Mississippi Amateur Radio Club

Hey,I know what I will do. (whenever I get off my lazyyyyy duff and get around to it) I think that Club still meets the third Thursday evening (about 7:00 or 8:00 PM) of each month at the Red Cross Building on Riverside Drive. (about seven or eight miles Northeast of me) One of these evenings I might take my radio over there and ask somebody. cuhulin

1195. So Why . . . Choose a Slinky over Stranded Copper Wire for a Shortwave Listening (SWL) Antenna ?

Newsgroup: rec.radio.shortwave
Date: 2006-04-11 20:37:48 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1144787868.905494.170430@v46g2000cwv.googlegroups.com>
Source record: 70451

Bob [K5QWG],

So Why . . . Choose a Slinky over Stranded Copper Wire
for a Shortwave Listening (SWL) Antenna ?

Yes the Signal capture Area is only 15 Feet vice the 64 Feet of Wire
wrapped-up in the Slinky.

But when compared to a Single Copper Wire that is also 15 Feet Long
the Metal Slinky due to it's Coiled-Up-Wire {Spring} Shape has a
cross-sectional-area that has the electrical appearance of a Thicker
(Much Larger Wire) and thus is the better RF Signal gatherer.

Note - That the Slinky has the added 'dimension' of Thickness about
2.75 Inch Diameter vice about 1/8 Inch Diameter for the Copper Wire.

FWIW - The same could be said for an Antenna Element that is
made of an Inch Diameter (1") piece of Copper Pipe that is 15 Feet
Long over a piece of #14 AWG Stranded Copper Wire that is also
15 Feet Long.

Either way the Slinky or the Copper Pipe has a Larger-Physical-Area
and Greater-Surface-Area for the RF Signal Electrons to be gathered
'in' and and 'on' then the same length {long} of Wire.

So Why . . . Choose a Slinky over Stranded Copper Wire for a
Shortwave Listening (SWL) Antenna ? ? ?
- - - CAUSE IT'S A SLINKY ! :o)

yes i am a little bit slinky - iane ~ RHF

Thanks to David and Tim.

The specs of the telescopic mast in the Radio Works catalog look a lot
like those of the MFJ 1910.

http://www.mfjenterprises.com/products.php?prodid=MFJ-1910

The '1910 doesn't seem to have gotten the greatest of reviews at
eham.com, even if we assume that the last 3 reviewers (all 3 posted on
the same date) are the same person or are basing their opinion one
single bad experience.

http://www.eham.net/reviews/detail/4165

I did happen to find the website that I was looking for, incidentally.
The Mast Company in Raleigh, NC. :

http://www.tmastco.com/

They have a range of sizes/strengths in telescoping masts:

http://www.tmastco.com/TelepolePage.htm

For those interested, the DK9SQ telescoping mast receives a good review
here:

http://www.io.com/~n5fc/dk9sq.html

Available from here:

http://www.bright.net/~kanga/kanga/dk9sq/mast.htm

Now perhaps RHF will like to chime in about crappie poles! ;)

Last year I saw a website with a article about somebody who had a Slinky
on the top step of one of those pyramids in Yucatan or wherever (it was
something like that with lots of steps) it is.They turned that Slinky
toy loose and it never missed a step all the way down to the bottom.

I Emailed Kaito today and told them they were too high priced. for KA1103. I told them they had to at least ship for free or throw in the KA-31 loop or I would just buy off of Ebay from Lypin. They decided to throw in the loop. I might still buy off of Ebay.

From: SeeingEyeDogg <look@u.org>
Message-ID: <123od56mhl26e68@corp.supernews.com>
Source record: 70469

The Real Figures on Immigration

Around 90 to 95 percent of Illegal pendejos came across the Mexican border.

Q: So a fence along the southern border would do an important job of
eliminating illegal immigration?
A: It is a critically important component.

Illegal pendejos use $10 billion more in social services at the federal
level than they paid in taxes. ... if we legalize illegals the cost would
roughly triple. An unskilled illegal immigrant is costly but an unskilled
legal immigrant is a fiscal disaster.
...
An unskilled illegal immigrant is costly but an unskilled legal immigrant is
a fiscal disaster because, although presumably he is being paid on the books
and he pays his taxes like he's supposed to, he is now eligible for
everything, or a lot of things, but he still doesn't make any money.
...
The reason immigrants create a fiscal cost is not because they are illegal.
They create a fiscal cost because they have very little education and people
with very little education don't pay much in taxes, because they don't make
very much. But they tend to use a lot in services. If we legalize them, it
makes the problem much worse.
...
the problem here is that unskilled immigration is simply incompatible with a
modern American economy that doesn't offer very much to unskilled workers
and the modern American welfare state.
...
If you want to have large-scale unskilled immigration, then you better get
rid of the welfare state first.

Right, RHF, that's precisely what I did over the weekend while spending some time in the GW Nat'l Forest and Shenandoah Nat'l Park. While there, I gave a try to your crappie pole idea. Works fairly well with a lightweight antenna. I strung the far end of a Par EF-SWL antenna to a 20 foot Black Widow crappie rod. The rod did have a fair degree of flexibility to it and probably lost about 4 feet of its height due to that fact. In addition to using it as a mast, it can also prove useful in getting your antenna strung up in a tree.

Down the road, I'll likely pick up one of these taller masts, as well. In any case, thanks for the idea!

Junius

I've owned a couple of the AOR widebands, the AR 1000 and the AR 8200B mkII.

But, my favorite is the Sony ICF-Pro80. Most are dead by now due to leaking electrolyrics and aging smd capacitors. Sony didn't use the best quality when building them. But, Kiwa Electronics to the rescue. Craig Siegenthaler at Kiwa can repair them in most cases, except where the leaking electrolytics might have created too much damage.

Look here: http://www.kiwa.com/PRO80.html

It covers 150 khz to 108 mhz continous, and with the supplied adapter, 115.15 to 223 mhz. About the size of a brick and a fine receiver, works better on ssb and am than the newer offerings.

If you can find one on E-Bay or elsewhere, they usually aren't working, or have very low audio, due to the above mentioned capacitors.

Les

> What is your advice.

The best site I found for reviews is (by far) http://www.eham.net/.
Lot's of good quality reviews... A while ago I ended up getting a
Kenwood TH-F6 tri-bander based on the reviews. A little expensive, but
it seems like a good radio, but I really can't compare. It has a load
of features, that's for sure. I thought it would be good to have some
sort of alternate commmunication if there is an earthquake or some
other sort of disaster.

I tried a CB first, but there is *no one* using CB around here. I
thought there would be at least a few truckers or something.

I don't have a license or anything, so I've just used it to listen. I
should get a license and join up with one of the emergency
communications clubs or something, but never seem to get around to it.

Depending on your plans, you might want to get a scanner, instead.

Poverty Among the Boerfolk

Annette calls in from South Africa to talk about the economic plight faced by the Boerfolk. Job quotas have been imposed against the Boerfolk that literally shut them out of job opportunities, and there is a defacto "Whites Need Not Apply" policy among most employers in the "New South Africa". Annette also discusses the reasons behind this ethnic cleansing of Whites in South Africa.

North and south freeways in So Cal use Chan 15, east and west use Chan
17 or 19 for CB

North of Burbank..its 15 to hiway 46..changes to 17

Hiway 14 to Palmdale Lancaster..the commuters use 12

I use mine just about every day in your AO

Tecsun radios seem to be sold under a number of different brands. Maybe this is Tecsun's line made for a different part of the world? (What part I wouldn't know.) Tecsun radios are sold as Tecsun in China, Eton in the US, and Grundig in Europe AFAIK. Degen radios are sold as Kaito in North America. I guess it's the same impulse that led Japanese companies to rebrand themselves in the early days of transistor radios so that the radios wouldn't be associated with "the evil Japs who bombed us at Pearl Harbor". For whatever reason, it appears that China (meaning the CCP) is going to great efforts to not have people associate Chinese made radios with China.

Hi,

I have an ICOM IC-R5 that I recently purchased. I have mixed feelings
about it. The performance with the stock antenna is only so-so. I
got an SMA to bayonet adapter and that helped (with a longer 2M and
440 antenna) with better signal capture on more frequencies. I also
got an SMA to SO-259 cabled adapter to use my outdoor antenna for HF
frequencies. That also helped quite alot.

I use it to scan the bands to check for actvity and then go to my
regular receivers and tune them to the selected freq. that I decided
upon. Does that make sense to you?

At any rate, they are fine for limited use but not as a primary piece.

That is my personal impression.

Too bad that Tecsun (Grundig) won't put a weather band on one of their crank radios. I'd think that if you live in a place where you need split second weather warnings (like Tornado Alley) that a dedicated weather radio would be better. I have a Midland WR-100 that can supposedly run on batteries, but I'd think that it would eat them quite vigorously. I rarely use it anyway, because California just doesn't have the kind of nasty weather that requires anything more than the nightly TV news weather report. California has earthquakes and floods and fires, but since those aren't directly weather related a weather radio does little to help. I keep a cheap Rat Shack AM/FM portable by my bed for most stuff, and a Degen 1102 ready to evacuate with if I have to. Most of the hurricane evacuees didn't have portable radios at the ready, and that caused a lot of frustration. If you're evacuated and stuck in a HS gym or community center with a lot of other people, having a working portable radio could make you the one eyed man in the land of the blind.

Hi,

I'm living in a fairly large college dorm and I feel as though, as a consequence, my Grundig FR-200 is not able to pick up what it otherwise might. Considering that around 400-500 college students live here and remembering that college student = laptop / desktop + television + stereos + who knows what else. . . Do you think this would make a significant difference? Am I living in shortwave hell?

Thanks in advance for your ideas!

Well,I just now dischovered what was making that rattling around noise in my Pioneer Onkyo SX-690 AM/FM stereo radio that I bought at the Goodwill store last year.Two philips head screws on each side of the cabinet hold the cabinet to the chassis,easy as pie to rmove that cabinet from the chassis.The metal grill on top of the cabinet has a lot of slots.Just the perfect size for the two dimes I found that had fallen down in there.I saw two glass fuses and it didn't look to me like the wires inside of the fuses had blown.

Maybe someday I will hook up the two Pioneer speakers that came with the radio and try it out.

I use the previous Icom model, R2 and am satisfied - though do
understand that I did not expect much for the HF coverage. It's a
good VHF/UHF scanner; the issues with HF are:
1) the bandwidth is a bit wide
2) you need a bit more than the stock rubber duck for HF.
I have used it mobile with a 1/4 wave 2 meter mag-mount antenna and
have found that due to the coax being part of the antenna I actually
receive the major broadcasters pretty good - in the later afternoon
through the night. While I'm happy with it - you need to understand
these types of radio, particularly the handheld variety, tend to be
better scanners than HF radios. That being said, if you have the

disposable income go for it!

Yes, you are living in shortwave hell. However there is some hope;
suggest you hang some wire outside your window & wrap it around the
antenna about 10 times or so then check reception. Keep close to the
window to minimize the amount of wire inside the room. I'd be willing
to bet that you can rustle up about 20 feet or so of wire from
somewhere/somebody at no cost.

Good luck,
Howard

Last year when the Bell South woman next door bought a new ground rod at the Home Depot store,she asked me if I have a sledge hammer.(naturally,I have a sledge hammer,two of them,in fact.The old handle is broken off of my oldest sledge hammer.I bought a new sledge hammer at the Home Depot store a few years ago)

I got my new sledge hammer and she got on her ladder by the side of her house and she started hammering the ground rod into the ground while I was holding the ladder for her.When she got the ground rod hammered into the ground about halfway,then I took over.

That last one, the one on the right, is very interesting.. I would love to
find price and availability on a couple of those radios, but their own
website, though partially in English, is only in Chinese in the section
where you would enquire about prices or buy a radio. I can find noplace that
is selling them outside the Redsun website.

I think most of the market for those radios is China. I mean, it's a
billion person market, with lots of isolated villages who only have the
shortwave services. The point of the names of the radios is to give the
impression of a Western brand--associated with quality--to the local
people--just like there was a craze in the 80's of selling Euro-branded
products in America, down to European Styling Shampoo and Le Car.

www.google.com Signal Hill Radios

Where it says,Signal Hill Trading Company,Inc: Shortwave

I own one of those little Signal Hill AM/FM/Shortwave radios and I own a
Bell & Howell radio just like it.I believe the same company/factory
makes both radios.

"Currently building a rechargable
battery back, using a small permanent magnet DC motor and some odd
components to make the last two radios also operable off of a
hand-crank.
This device will be seperate from the radio however, and will only plug
in
to provice the 6 VDC they require. I did have this device working, but
with
plastic gears, and these died after a short trial run. Worked
perfectly for
a few seconds though... :) "

Got links to pictures?

Has anyone else built a hand powered generator that is portable for
bugout use?

Thanks

TMT

Huimmm..I was browsing through my Secret Stash of Stuff..and found an
old but minty Bendix radio..has AM, IRRC FM, and Marine band, with the
direction finding loop on the top. A commercial piece, elderly of
course, but it works just hunky dory.

Anyone got any interest in it? Trade for?

Gunner

I'm sure this is a really obvious question and I'm also sure I'm showing my inexperience by even asking, but hopefully I will be spared criticism, however appropriate it may be.

Here (in the SF Bay Area) I consistently hear what I can only describe as "satellite noise" around 4Mhz. You know that sort of high-pitched squeeling noise they play during movies when they're showing a satellite in orbit? Or when they show a tracking screen with those sinusoidal waves? Yeah, that sound. I didn't think satellites messed around with such low frequencies, but maybe I am wrong? Does anyone know what this might be?

I've just gotten into shortwave radio and while I like listening to all of the chatter, I am particularly fond of the noises that I am picking up. There just seem to be so many types. I wish I knew which ones are nonesense atmospheric/mechanical noise and which are meaningful. I hear a lot of pulses or tones at regular intervals (and that are not the UTC time broadcast). I wonder what these are.

Hmm. . .

Most manufacturers give you the same thing. Why are you asking? Look
at the current specs.

I'm asking because the OP said they wanted a 2m HT with extended receive, and in order to help him/her I wanted to know what they meant by "extended receive". There is a significant difference between a receiver that covers 144-174 Mhz (NB FM only) and one that covers from the AM broadcast band to 1.2Ghz.

However, since the OP apparently treats Usenet as a write-only medium I guess we won't be able to help them.

Hello,

I would recommend that you take a look at some of these frequency
allocation charts to familiarize yourself with the HF bands:

http://www.ntia.doc.gov/osmhome/alloctbl/alloctbl.html
www.fcc.gov/oet/spectrum/table/fcctable.pdf
http://www.markworld.com/hamradio/alloc.html

Between all that and the cinderblock that you
find in the older dorms you're in a bit of a pickle.
When I used to work in one of the labs in the
basement back in college, I went up to the
second floor, hung a wire out the window,
went down to the basement and brought it
inside and hooked it up to my shortwave so
I could listen while I worked. However, that
being before everyone had a laptop, that might
not help you as much these days. You might
want to look into making a simple magnetic
loop and see if that will do the trick of both
lowering the noise floor and improving your
reception.

RHF ought to be along shortly with some links
on those, but here's one to think about:

http://www.greertech.com/hfloop/mymagloop.html

I can't recall if the FR-200 has an external antenna
hookup, but it probably doesn't. If you need to
connect to your antenna, you can try what's suggested
in Joe Carr's Receiving Antenna Handbook (pg 33):
use a T37 or T50 toroid with the antenna wire
wrapped around it and place the toroid on the
telescoping antenna. You'd use 20 turns of #26
wire for <7 MHz, and 8-10 turns for >7 MHz.

Find the main breaker. Pull it.

Hahahaha. Technically, this may be a correct answer. However....

When I lived in a college dorm (yes, electricity was being distributed back then), there was a carrier current AM station at the University as well. Do they still have those things? I can only suppose one of those would make the situation even worse.

For my electrical things, I had one five-tube RCA Victor AA5 and an alarm clock. That is all.

If you want to talk about capture area, I've known of more than a few
people who live under metal roofs, and they've tried attaching
feedlines and antenna tuners to their roofs. Results have been
somewhat mixed. Typically a lot of noise, mainly from iffy contact at

the metal seams.

In the ï¿½80s, Zuricher Dave Phillips helped create a noise tradition.
He perpetuates it, screening de rigueur animal-torture footage and
"provocative" slogans ("NORMAL," "MORAL") while generating ear-bleed
gunfire, explosions and hisses. Itï¿½s painful and, except for some
sound textures, boring. Bolles, aside after: "People are mean."

Justice Yeldham is a small, stocky Australian self-torturer. He drips
great blobs of illuminated goo into his mouth, then gradually expels
it onto a plate of glass he squash-jerks against his face. As he
lurches dangerously about, you can see his distorted face through the
glass, which has a contact mike stuck to it. Yeldham vocalizes against
the glass, manipulating the sounds with an array of effects devices
belted around his waist. The sounds careen unpredictably and
truthfully, interrupted a few times when Yeldham gets unplugged. He
breaks the glass, cuts his mouth with it and kisses the blood around.
Itï¿½s a satisfying performance. Finished, he says (with some
difficulty) that heï¿½s got 45s for sale, and heï¿½ll smear his blood on
them if you like. I wish Iï¿½d bought one.

Between segments, everybodyï¿½s out on the cool night sidewalk, smoking and talking. Yeldham is slouched alone on the curb, exhausted. Bolles comes out, announces, "If youï¿½ve got psychedelics, you should do them now."

Kitten Sparkles is the audiovisual project of the wizened mini-magician Bolles (tonight sporting a cartoony elephant mask) and the quiet, stooping loopmaster Joseph Hammer. The room is dark. Hammer expresses most of the soundcraft ï¿½ roaring, supportive cycles. Bolles, meanwhile, aims a light strobe into individual audience membersï¿½ eyes till everyoneï¿½s blinded; no way you can keep your eyes open. Behind your lids, you discover ever-changing patterns of streaks and symmetries, octagons breaking into coherent subcomponents and swirling down a geometric drain, a hole in the center of reality, white like death. Simple but effective, this mode takes you to authentically new places, and itï¿½s different for each subject. Adjusting the setup beforehand, Bolles describes his own auditory reaction: "This music frees me, I can hear anything in it. Itï¿½s like downloads forever in my mind."

You wonï¿½t find this stuff at the Knitting Factory.

Large as in high-rise, concrete construction?

Steel frame, you're probably living in a shield room<grin>. I tried shortwave from a dorm like that at the University of Wisconsin back in the 1970s. Was lucky to work across the street on 40 meters!

I don't think your problem is as much interference as it is the building blocking the signals. (though as you suggest, the interference situation has become a lot worse - there wasn't a single computer on my floor in 1978!)

The key is going to be to get some kind of antenna outside your room. As others have suggested, the easiest way to do so is to just pick up the radio & go outside<grin>... Alternatively, it might be possible to toss some wire out the window? At one time you could get an assortment of "magnet wire" at Radio Shack, maybe you still can? It's REALLY thin, pretty much invisible at any significant distance. Be careful about putting any kind of weight on the end; at least at Wisconsin the authorities REALLY frowned on throwing anything out of dorm windows. Probably less so if it isn't a high-rise.

While I don't advocate giving up on indoor listening altogether, I will say that taking the hobby outdoors can yield some very pleasing results, indeed. Last weekend, for example, I did a fair bit of listening while spending time in the Shenandoah Nat'l Park and surrounding areas... In the evening, I was drawing in all kinds of good stuff in the 60 m band: various AIR stations (Calcutta on 4860, Jammu on 4830, Chennai/Madras on 4800, Jaipur on 4910, Thiru'puram on 5010). I was getting very readable signals on various African stations, from Zambia to Gabon and so on. And I don't think I've ever gotten such good copy on R. Oman's 14:00 English broadcast. I could go on...

Suffice it to say that getting out of the indoor noise and nasty urban environments can make all the difference in the world. If you're really into your shortwave, then it's well worth the effort to occasionally bring your hobby to where signals are more easily received! The fresh air doesn't hurt, either.

I am living in a seniors only apartment complex with computer operated doors and flourescent lights on 24/7 surrounded by several cell towers <S>. I can empathise. My sugggestion would be to get some wire (multistrand insulated 50') and hnag it out the window, or if there is a tree nearby, tie something hefty on one end and chuck it up into the tree so it winds itself around a limb and connect it to your receiver and run a ground to a metal cold water pipe. That will catch some signals. For the rest, you will either have to live with it, or find some place away from the computers and stuff to sit and enjoy your radio. Of course, if you can get listen while everyone else is asleep, that might work too . Just don't forget to study too <s>. V

Hi,

I'm living in a fairly large college dorm and I feel as though, as a consequence, my Grundig FR-200 is not able to pick up what it otherwise might. Considering that around 400-500 college students live here and remembering that college student = laptop / desktop + television + stereos + who knows what else. . . Do you think this would make a significant difference? Am I living in shortwave hell?

Thanks in advance for your ideas!

Selwyn-Lloyd

That's what I do as well. We live in a dorm-like apartment on a college campus due to my wife's university job (moving out soon, thankfully). I can get decent reception on my Satellit 800, but sometimes it's pointless, what with all the RF noise. Going outside on a nice day yields excellent results. My Grundig YB-400PE excells in the outdoors. Nice to be able to walk about a block away to a nearby hill, and listen to Radio Netherlands or whatever and enjoy it _noise free!_

That said, if you are intent on listening inside, some kind of antenna is in order. A wire hung outside would be best, but I know that isn't always possible with modern dorm windows (which are often essentially unremovable). I would recommend trying a loop antenna like the AN-LP1, which can yield good results in a noisy environment, because you can turn the loop to null out the noise.

This might be true if the noise came from a single direction (or 2 180
degree disposed directions). In a dorm, my guess is the noise is from every
direction azimuth and elevation.

cuhulin,

In the past month, Chuck Harder has been off the air - and in the hospital - most of the time, save for two days last week (April 3 and April 6); on April 6, he said that he had caught (his words) "the flesh-eating bug" (necrotizing fasciitis), an invariably fatal, fulminant streptococcus infection. If so, he probably got it in the hospital; there are lots and lots of ugly, nasty bugs there.
Today (April 12), he's still off the air; Talk Star Radio Network is re-running his interviews back in early February with former Reform Party VP candidate Pat Choate and CFR member Peter G. Peterson.
You mentioned earlier that you like Bo Gritz. You might do a little research and find out where Bo Gritz is on the radio dial because let's face it: Chuck Harder won't be around much longer.
He's dying.
You and Chuck Harder have repeatedly reprimanded me to "get a life."
I'm glad I still have a life to get. But what about Chuck Harder?

Could you be hearing the CODAR "sweeper" interference? This generally
appears around 4.6 to 4.8 or so MHZ.

Because I spend a lot of time on the road, I've gotten into the habit of listening using the parked car as my "shack". And there's no challenge in finding good, quiet listening places, if you're willing to do a short bit of driving.

Some time back, I had received one of these AutoExec mobile office units as a gift. While it was intended to be of use for my work, it has become invaluable to my in-vehicle SWLing.

http://www.a2zsolutions.com/desks/seat/ae-index.htm

The roll-out second shelf is nice for jotting down the random note, logging stations, etc. The large side slot is useful for storing bound frequency guides. There's also a nice space below where I'll often sit a second radio that's not in use.

The AutoExec car desk is of such a height, that I'll occasionally use it outside the car, too, in outdoor settings, alongside a low-sitting fold-out chair...
http://www.campmor.com/webapp/wcs/stores/servlet/ProductDisplay?productId=8560702&memberId=12500226

Often, I'll string a wire antenna from the parked car. In using a Par antenna, I've connected the tranformer to a magnet mount (with coax feed) that's sitting atop the car's roof, stringing the 45' radiator out to a tree branch or to the end of an upright mounted 20 foot crappie rod (I'd like to get a taller telescoping mast). If space is a limiting factor and/or if I'm in a rush to set things up, I've been fairly surprised by the results I can get simply by placing an MFJ 1956 12-foot whip onto the magnet mount, sometimes running the coax through an MFJ 1045C battery-powered active receive preselector.

I tend to use either an Eton E1 or Drake SW8 in such listening.

I find it a pretty convenient means of listening. For one thing, I spend a fair amount of time on the road. Secondly, I leave a lot of this stuff out in the car (antennae, magnet mount, car desk, crappie rod, antenna rope, printed & bound ILG/Primetime/eibi scheds, a few

logging sheets, etc), so it's no big deal to grab the receiver on my way out, and I'm set...

Anyway, it's one of many possible alternatives. It works for me. So I thought I'd throw it out there for whatever it might be worth to others.

There's an easy way to find out. Walk out of your dorm with your
radio, find an empty field, and listen to the radio. Any better or
worse than your dorm listening? You won't know until you compare.

Misuse of Camp David

Today at 5:01am, brian1 wrote:

Yesterday at 5:40pm, fav wrote:John said

"I cannot speak for others, but when I hear the rantings of some
anti-gun talking head, I remember the vilification I have already
suffered and trying to find some common ground becomes the last thing
on my mind.

Tell, me Aligator, are you aware that a few years ago in my country
Australia in the state of New South Wales, a "leading light" of the
"gun control" movement came out and publicly stated that recreational
firearms owners were more likely to sexually molest their own children
than "normal" people? "

It is exactly that sort of behaviour, from irresponsible people
purporting to be supporters of the arms control movement which makes
any sort of agreement on arms control so difficult.

Tom, Straightshooter and Cardigan, tell me I'm wrong.

Brian1 said about the Aussieseek Messageboards at

http://aussieseek.proboards25.com/

Everyone may as well give it up. About the only people who read these
gun topics are pro gunners.

Tom and Cardigan... and now, 'aligator' [sic]... simple post cut &
pastes from anti gun sites from years past. They post in an identical
style, always starting a new thread rather than stay with the same one
they previously initiated.

They sometimes respond to each other with a perfunctory slap on the
back and another cut & paste before abandoning the thread and moving
on. Overtly, they ignore pro gun posters, but covertly, it is obvious
their goal is to provoke.

In the past, the best response has been to answer in kind... post a
whole series of new threads, initiating your own series of independent
gun subjects in long cut & paste rants. This has the effect of moving
their own new threads rapidly down and off the page.

After a while, they (he/she) will take official notice and start
responding directly with angry complaints. At that point you can offer

to debate within a single thread without starting new ones... if they'll do the same. In the past, though, they (he/she) usually respond to that by simply going away for a while and then eventually returning under a new username.

Keith from Aussieseek Messageboards
said to Brian1

Well thanks for that Dr Doom. I will now be able to sleep at night thanks to your report on colateral damage. Kinda like a Pentagon general watching it all on CNN while we suffer in the trenches. This War between both sides sides also has an effect on civilian posters who want to discuss politics in between the gun posts if possible.
Indeed they seem well organised. Sadly yer wrong.I have tried banning IP locations and they are all separate on the anti gun side coming from different computers and countries.
They must talk on the phone.
Not so the Pro Gun Side. There are three individuals here with several nics. I dont mind.

Its your problem not mine though I suspect you dont like em much.

For us its traffic and good reads. The discourse is limited only by the ability of the posters in using the right weapon.
Plagirising other peoples posts as stolen bullets makes me uncomfortable. But all bullets will do what the sender wants. Faithful arent they?

But from a lateral point of view... at least aligator has a sense of humour !!!!!

How about this little Gem from Cardigan.

Wal Mart DOES sell guns. Well, I know people give you all kinds of reasons to own a GUN but that doesn't mean that someone can't use those guns to kill people. Wal-Mart also Stocks Brokeback Mountain Next to Sesame Street

And oh yes the aligators Joke

She spoke for almost an hour on her future plans for increasing every Native American's present standard of living, should she one day become the first female President. She referred to her career as a New York Senator, and how she had signed "YES" for every Indian issue that came to her desk for approval.

Although the Senator was vague on the details of her plan, she seemed most enthusiastic about her future ideas for helping her "red sisters and brothers".

At the conclusion of her speech, the Tribes presented the Senator with a plaque inscribed with her new Indian name - Walking Eagle.

The proud Senator then departed in her motorcade, waving to the crowds. A news reporter later inquired of the group of chiefs as to how they came to select the new name given to the Senator.

They explained that Walking Eagle is the name given to a bird so full of shit it can no longer fly.

The point is. Some Wars will never end....even with a free weekend thrown in as an incentive at Camp David

Pro Gunners or Anti Gunners

Iraq

Non Stop.

Never ending.

Does anyone have any information relating to Denmark starting a SW service
in Arabic / Persian / Pashto?
Since the Cartoon Row, Denmark has lost 1000 million Euros in exports to the
Arab-Islamic world.
However, I remember Denmark shutting down its SW service and going
exclusively to the WWW to reach its nationals -- and only in Danish.

I've not seen/heard anything about this on World of Radio (Hauser),
Radiointel, or kimandrewelliott.com. Perhaps you might direct your
enquiry to Glenn Hauser or Kim Elliott.

Hey, and if in searching elsewhere you do learn anything about such a
Danish broadcasting scheme being in the works, let us know!

And if/when you contact the Danish authorities, remind them to put in
an Urdu service, too... ;-)

1329. Re: Grundig S350 Good or really Bad?

Newsgroup: rec.radio.shortwave
Date: 2006-04-12 23:50:30 UTC
From: Will <wgmartin99@yahoo.com>
Message-ID: <1144885830.104668.244860@u72g2000cwu.googlegroups.com>
Source record: 70536

The basic S350 has been discontinued. The improved model is the
S350DL and the list price on it was reduced to $100 from the former
$150 early this year. However, the large headphones that came with this
radio
were discontinued as part of the price reduction, but this was not done
well --
the first of the reduced-price S350DLs came in boxes that bore legends
stating that the headphones WERE included, but they were simply left
out of the boxes. There was still a space in the packing material where
the
headphones used to be stowed. (I understand that there were also some
smaller boxes with no space for the headphones but the box printing
also
said that the headphones were inside.)

Some vendors also advertised the S350DLs at the $100 price and stated
in their catalog descriptions that the headphones were included. This
caused confusion and ill-will between customers and vendors and the
incidents have not been resolved as of yet.

The radio itself has its good and bad points. It does have
reasonably-good
audio quality. The S350DL has modified tuning circuitry that largely
eliminates the shortwave drift that plagued the earlier S350. However,
a
side effect of this is that the tuning of an exact 0 or 5 kHz channel
is a bit
"sticky" -- the radio will lock on a frequency a kHz or two off and
make it hard
to tweak the tuning to the correct exact frequency. Once it IS tuned
correctly, it doesn't drift off that.

Tuning using the knob is a bit clunky. The knob seems a bit rough and
the concentric coarse/fine tuning isn't very smooth. SW sensitivity is
reasonable but not as good as many other radios (which mostly
admittedly
cost more, except for the Kaito/Degen models). It still is just a
single-
conversion receiver, which means that there are images 900 kHz away
from the correct frequency.

AM MW reception is OK, but this isn't a GE SuperRadio with a digital
display. It is better than most ordinary AM radios.

FM reception was disappointing to me. It *will* receive local weak FM
signals but it is *very* dependent on the radio's position (whether it

was
sitting upright or laying on its back, and what direction it was
turned) and
whether the whip antenna was unfolded and set to come out the side of
the
radio horizontally or not, and again what direction the radio is
turned. Things
change if you are holding the radio or if it is sat down away from you.
This
means that you *can* get the stations you want, usually, but you can't
just
sit the radio on a table, tune the frequency, and leave it alone at
that. You
have to fiddle with it for each different weak station. (Strong
stations come
in OK without fiddling, but that's no big deal.)

Hope this helps!

Will Martin

Since the range on CB, without hanging a lot of metal in the sky, is
only a few miles, what's going on even in the next town may not have
anything to do with where you are.

On the east coast, I can drive hundreds of miles on I-95 (the
equivalent of I-5 here) and hear nothing on CB unless the traffic jams
up. Then they come out of the woodwork.

Two words - "cool factor"

FWIW, I've usually had better results tuning and using zip cord antennas
vs. slinky antennas, but nothing is a priceless as the look on my wife's
face when she first came in and found me using a slinky antenna!

Most of us live in shortwave hell in one way or another. BPL, line noise, neighbors with a plasma tv that runs 24/7,ect ect ect. You just have to learn to make the best of it when at home. A four hour dx expidition to your local city park at night with a lawnchair and cooler of beer can yield good results.

Didn't you try that? If I recall, your coax wrapped around the spinning hub, locking it solid. You did a quick flight over the handlebars.

The email addresses are easily accessible through the links, thats why I
posted them, instead of the email addresses directly, which would only
be indiscriminately bot-harvested, which sucks up the bandwidth of gov
servers my tax dollars pay for.

besides, with Harper in power, i can see a security certificate
activated in my name for "contributing to all kindsa junk mail which
terrorizes our tech guys and makes officials frustrated and shit"

hope your lobbying work goes well. think i will do some myself.

todd

1354. Grayland DXpedition Loggings - April 9-10, & Antenna Report

Newsgroup: rec.radio.shortwave
Date: 2006-04-13 05:19:36 UTC
From: Guy Atkins <dxnospam@guyatkins.com>
Message-ID: <VYudnegq5boQQqDZnZ2dnUVZ_tKdnZ2d@comcast.com>
Source record: 70562

This two-night trip to Grayland turned out to be 95% tropical bands DXing, as I found very little to get excited about on the medium wave frequencies. There was some moderate geo-storming during the evenings (particularly 4/9), but I don't know if it was my lack of Beverage antennas or the propagation to blame.

The tropicals were far more productive than the meager catch of TP regulars listed below. Best catch was R. Diff. TV de Djibouti on 4780 with an ID, heard via longpath 1-1/2 hours after Grayland sunrise and 1/2 hour prior to Djibouti sunset. Botswana and Zambia were also logged during morning longpath.

Since I was staying at Grayland Beach State Park (1/2 mi. south of the Grayland motel venue), I was limited to antennas that would fit on the campsite (the few newer campsites at Grayland suitable for very short Beverages were already reserved months ago). I can only wonder if the noise would have been lower had I been in the new, expanded section of Grayland, where campers are a bit further apart, and a few sites allow for a few hundred feet of wire strung through the brush.

I used two newly-acquired antennas which complement each other well--the Wellbrook ALA 100 and the tiny PA0RDT "Mini-Whip" (about the height of a pencil). The antenna is powered through the coax (like the ALA 100) using a small interface box mounted near the receiver. The antenna and the well-built interface box are sold by Dutch NDB enthusiast Roelof Bakker, PA0RDT, for just 43 Euros (shipping to USA included). I think Roelof may have tweaked the antenna element to produce better results above longwave, based on some other information I've heard. By the way, this antenna uses an overload-resistant amplifier designed with some advice from well-known Oregon NDB'er Steve Ratzlaff.

The ALA 100 was in a 40-ft. circumference setup the first night, and the second evening I moved the poles apart and restrung the loop for a 54-ft. circumference. Both nights the null was oriented toward Seattle. I used two, 20-ft. "Black Widow" collapsible fishing poles as supports.

I mounted the Mini-Whip at 27 feet high on the second-to-last section of a DK9SQ mast. The generous height helped the gain, as its designer Roelof Bakker indicated it would. John Plimmer in South Africa mentioned that the Mini-Whip is very prone to electrical noise, and I'd have to agree that it's a real noise magnet. However, I was very impressed with it's performance throughout medium wave up through the tropical bands. The gain drops off quickly above 9 MHz or so compared to the ALA 100. On medium wave the 5-inch long Mini-Whip kept right up with the Wellbrook, and many times was the antenna of choice. On some parts of MW though, it was considerably noisier than the Wellbrook (my campsite was near a number of RVs with TVs, light

dimmers, etc. all polluting the bands). I think the Mini-Whip would have been the equal of the Wellbrook if I had been in a totally RF-quiet area. (Hmm..I wonder if a 1:1 isolation transformer between the Mini-Whip's power interface and the receiver would help reduce noise?)

The ALA 100 was impervious to 99% of the noise, and at times was *extremely* impressive. However, on the tropical bands the Mini-Whip was the preferred antenna with better s/n ratio. I didn't have opportunity to experience the Mini-Whip's reported superiority on longwave, as the local noise and RFI buzzing was so bad below 500 kHz.

Both antennas are easily transportable and great choices when space is at a premium. Please check my blog site in a couple of days for some photos of these antennas, and also a few MP3 audio clips of DX from the trip to Grayland (the tropical band logs will be posted there, too).

The SDR-1000 showed its superiority over my modded R-75 nearly every time, although there were a couple tropical band frequencies where the ICOM was clearly the winner. I *really* like Jeff, WA6AHL's new version of the PowerSDR software for the Flex-Radio, with filter controls and operation that fits "my" DXing style, and the expanded panadapter of 85 kHz with panning and zooming features. The panadapter itself is far more useful than the "stock" PowerSDR software from Flex-Radio. Screenshots and comments will also be posted to the blog soon.

On to the few TP medium wave loggings:

---
558 JAPAN JOCR, Kobe, Apr 10 1307 - Japanese female pop music tune to 1310 female announcers in Japanese. Korean language heard in background, tentatively HLQH, KBS 2. Fair level. (Atkins-WA)

594 JAPAN JOAK Tokyo, Apr 9 1220 - Slowly building signal at tune-in 1220, with lively Japanese conversation with male and female announcers. Numerous mentions of Tokyo. Fair to good level. Best reception in the SDR-1000's Binaural-SSB mode, which spreads the noise frequencies left-to-right on stereo headphones, allowing for better concentration on the voice frequencies. Also noted 4/10 with a strong signal at 1322. (Atkins-WA)

612 AUSTRALIA 4QR Brisbane, Apr 10 1318 - Male and female announcers with talk in Aussie-accent English; mentions of Brisbane and Adelaide. Parallel to a weak 774 3LO Melbourne. Fair to good level. (Atkins-WA)

612 NEW ZEALAND 3XG Radio Rhema, Apr 9 1334 - Tentatively 3XG with choir music, male announcers in English with Kiwi accent. Seemed to be discussing church matters. Weak signal. (Atkins-WA)

667 UNIDENTIFIED Unid, Apr 10 1315 - Weak, QRMed signal, too messy to identify language 100%. Seemed Japanese or Korean. (Atkins-WA)

774 JAPAN JOUB Akita, Apr 9 1235 - Strong signal of male announcer in Japanese, and parallel to 828 JOBB Tokyo. Scraps of Aussie-accent English in the background, possibly 4TO Townsville. (Atkins-WA)

828 JAPAN JOBB Tokyo, Apr 9 1248 - Fast-paced interview or radio drama at a very good level. Parallel to 774 JOUB Akita. 3+1 time pips and NHK2 ID noted weakly during a fade at the top of the hour (of course), but signal back up at 1303. (Atkins-WA)

873 JAPAN JOGB Kumamoto, Apr 9 13012 - Weak signal of male talk in Japanese, and parallel to 828 JOBB Tokyo. (Atkins-WA)

891 AUSTRALIA 4TAB Innisfail, Apr 10 1332 - Right at tune-in I caught 'Radio T-A-B Australia' ID at 1332, followed by man and woman chatter in English. Good level, but faded quickly. Is this their typical ID without the '4' in 4TAB?. (Atkins-WA)

891 UNIDENTIFIED Unid, Apr 9 1344 - Very weak signal of two male announcers in English, possibly Kiwi. Perhaps 2XW, Wellington? Stayed with signal and noise for 10 minutes, but it eventually faded out. (Atkins-WA)

SHORTWAVE

AUSTRALIA 2310, 1145-1150, VL8A Alice Springs Apr 10 Music program with West African kora music and vocals, introduced by announcer in English. VL8K Katherine in parallel, but both outlets extremely weak. Retuned at 1405 to find MUCH stronger, clearer signals on both frequencies. Still in audio (very weak) at 1545 (2.25 hours past Grayland sunrise). (Atkins-WA)

BOTSWANA 4930, 1520-, VOA Moepeng Hill Apr 10 James Taylor's 'You've Got a Friend' at 1520; announcer in English with mentions of VOA, and gave Web address for VOA Music Mix twice ('www.voamusicmix.net'). Announcer greetings to listeners in Malawi, Uganda, and India. Into more light pop music 1526. At 1528, the announcer mentioned the name of the program as 'Border Crossings--the music of the world.' Into news items 1530, including trade show fire in India. 'VOA News' ID at 1531. Surprisingly good signal at 2 hours past Grayland sunrise. (Atkins-WA)

DJIBOUTI 4780, 1450-1510, R. Diff. TV de Djibouti Apr 10 Male announcer in Arabic with pres. Koranic recitation at tune-in; Horn of Africa music with vocals, stringed instrument, and percussion at 1454. 'Techno piano' sound effects at 1500, then announcements and a fast '...wa Radio Djibouti' ID by man. Into news items, with various mentions of 'shariya'. Some CODAR QRM. Reception was a half-hour prior to Djibouti sunset, and 1-1/2 hours past Grayland sunrise. Fair at tune-in, but the signal dropped down into the noise by 1510. Very pleased with this catch, the best tropical bands log of the DXpedition. (Atkins-WA)

GUYANA 3291.1, 0518-0528, V. of Guyana, Sparendaam Apr 09 BBC relay in English, with 3-way roundtable discussion of political parties in the UK. Fair, and slowly improving signal. (Atkins-WA)

INDONESIA 3345, 1232-1241, RRI Ternate Apr 10 Brief talk in Indonesian by male, with another announcer in unid. language (not Arabic, but perhaps tribal or hill country lang.); mentions of 'Koran' and USA, with crowd noises and applause in background. Good signal. Retuned at 1410 to find female announcer in Indonesian and lagu romantik music. (Atkins-WA)

INDONESIA 3976, 1411-1418, RRI Pontianak Apr 10 'How Great Thou Art' hymn in Indonesian at 1411; Male announcer with many mentions of Pontianak 1413, followed by telephone report from a live event with auditorium noises in background. Excellent signal and audio. Still going strong at 1545 recheck (2.25 hours past local sunrise). (Atkins-WA)

PAPUA NEW GUINEA 3205, 1200-1217, R. West Sepik Apr 10 ID at 1200 in English, followed by world and PNG news items. Weather forecast for PNG at 1204, including mention of severe thunderstorms for Wabag region. Weather in Pidgin 1205, brief flute music, and more talk in Pidgin with numerous mentions of Vanimo. Catchy Melanesian tune at 1210. Good signal. (Atkins-WA)

PAPUA NEW GUINEA 3235, 1217-1219, R. West New Britain Apr 10 Fair to good signal of female announcer in Pidgin, introducing PNG musical group with Melanesian pop tune. Some utilities QRM on USB. (Atkins-WA)

PAPUA NEW GUINEA 3325, 1220-1231, R. North Solomons Apr 10 Log drums music to female announcer in Pidgin at 1223; primative-sounding vocals and flute and wood flute music at 1224. US pop tune at 1230. Fair signal, but wedged in tightly on both sides by adjacent-channel ute QRM. Presumed. (Atkins-WA)

PAPUA NEW GUINEA 3365, 1241-1248, R. Milne Bay Apr 10 Tentative. Very weak signal of two male announcers in probable Pidgin language, followed by pop music. Signal was barely above the noise floor. (Atkins-WA)

PAPUA NEW GUINEA 3385, 1248-1303, R. East New Britain Apr 10 Melanesian sing-sing music at tune-in, followed by 'Young Love' 50s tune. Male announcer in Pidgin 1258 with mention of Rabaul, PNG, 'meter band', and 'frequency'. Into old bluegrass Gospel tune. Fair to good signal. (Atkins-WA)

PAPUA NEW GUINEA 4960, 0920-0923, Catholic Radio Network Apr 10 Presumed CRN here, with Christian contemporary music and introduction to selections by woman announcer. Fair level, and noted again at 1135 with barely audible signal. (Atkins-WA)

PAPUA NEW GUINEA 7120, 0910-0913, Wantok Radio Light Apr 10 Noted in passing with strong signal with Bible reading and commentary by man and woman in English. Presumed. (Atkins-WA)

SOLOMON ISLANDS 5019.9, 0845-1118, SIBC Apr 10 First noted 0845 with island music and reggae tunes; good level. Poor signal at 1107 retune with female announcer reading South Pacific regional news items in English. Into Bible reading by man at 1115. (Atkins-WA)

SWAZILAND 4774.98, 0415-0432, TWR, Mpangela Ranch Apr 10 Talk by male and female in German, to German folk music at 0427. 'T-W-R' ID in English by male announcer at 0430, followed by Web address. Into 'Focus on the Family' with Chuck Swindoll at 0431. Good signal. (Atkins-WA)

VANUATU 3944.8, 0837-1105, R. Vanuatu Apr 10 Male announcer in Pidgin with intro to island music selections; mentions of Vanuatu. Fair to good signal. Retuned at 1101 to find a considerably weaker signal, with a sermon or devotional in presumed Bislama and 'pray for the peace of Jerusalem'

mentioned. (Atkins-WA)

ZAMBIA 4910, 0448-0453, ZNBC, Lusaka Apr 10 Tentative. Sermon or preaching in unid. African language by male. Poor and weakening signal, about an hour past Lusaka sunrise. (Atkins-WA)

ZAMBIA 4965, 1533-1538, R. Christian Voice Apr 10 Typical Christian programming in English, with children's drama program, sound effects, and teaching on Bible principles. Fair to good signal, but losing to the increasing band noise. VOA Botswana also in at this time. (Atkins-WA)

You of course would be more familiar with the term "Asinine" than
anyone else here, as you exemplify it!

The only one who has brought up this sex deal is you, as you are
clearly obsessed with it! I've found that the trolls who hang out on
USENET who are pitiful excuses for humans and have nothing better to do
than nit pick about spellings and make sad insinuations about people
they don't know, are people like you!

As I've said before, but clearly you have a comprehension problem, if
you don't want this to continue, don't post anymore. Your continued
posting, only continues showing what a low IQ you have, and how you
clearly have nothing else to do with your time.

If you'd like to make a factual post about what the topic is about,
that would mean you would have to know something and be willing to
share it, by all means, do so. Othewise:

FUCK OFF!

Hi,

Was wondering if anyone has any experience using the "Premium" Thomas &
Betts, Black, "UV-Resistant"
nylon tie wraps out of doors ?

e.g., do they become brittle after a fer years due to very cold temps, or UV
?

Or, do they really hold up well, etc. ?

Thanks,
Bob

Fabulous catches there Guy and a most absorbing report.
Thanks for that.
Some of those mediumwave catches are over 7,000 miles away, quite remarkable
for small active antenna's.
I would think the performance of the two active antenna's is right up there
with a 1,000 foot beverage.

I have the Roelof mini whip mounted well up, but it's performance doesn't
match my RF Systems DX 1 Pro, although it is a remarkable performer for its
tiny size and portability.

Hi Junius,

I'm going to forward a message and couple of photos to your e-mail address, which I initially received from Roelof. There's no web site to order, as this is a special antenna built "on the side" by a Dutch amateur. I think he's made these more as a favor for interested hobbyists.

If anyone else is interested in the photos and tech details of the PA0RDT mini-whip, please email me at: dxNOSPAM@guyatkins.com (remove the obvious letters :^)

Guy

Your past postings re the FlexRadio SDR 1000 aroused my interest but when I go to their web site I do not see the receiver only version listed. Have they given up on this option?

Ron

I'd like that. Now that I think about it more, the weather channels all work fine, it's just that I very rarely pick up any conversations on chanels 1--40. So I'm assuming it receives fine. It would be good to try it out with another CB and see if I can pick them from the same room.

What about Ledbetter Point, the north end of the Long Beach Peninsula?
I haven't been there since I was a kid, but what I remember was a whole
lot of nothing. Looking at the map, it might be a bit of a slog through
the sand dunes, as the road is on the (East) bay side of the peninsula .

Don't know anything about cold temps but they seem to hold up OK for
bright sunlight. I have my Davis anemometer wire attached to the pole
with them, 8 years this summer, still holding.

Hmmm...is the radio: Good or Really Bad. In my experience most $100.00 radios are something in-between those two absolutes. From everything I've read the strong points of the radio are good quality loud audio, easy to read display, selectable filters and complete coverage of fm, mw and shortwave broadcast bands. Downside includes single conversion design, selectable filters (wide is too wide), no keyboard entry, no ssb capability.

This radio is probably best thought of as a good sounding (and looking) AM FM radio that also happens to receive shortwave. With only basic controls it will catch the big broadcasters just fine and the results will be pretty darned enjoyable.

I would read the reviews previously suggested. And then as you indicated: "...I wanted to try it out for myself to see what I can receive on it also to see for my self what it it really is ." Trying it out yourself is a very good idea.

The college dorms I've seen have all been built out of thick concrete.
In such a building, you'll have to put your radio in a window (the sill
should have plenty of room) to get anything. If you can hang a wire out
the window, great.

ANTARCTIC About LRA36 Antarctic Territory.
Yesterday Sunday, I talk with the Sergeant in charge of the LRA36 Radio Nacional Arcangel San Gabriel at Base Esperanza, and he inform me that from already several weeks ago behind that the radio station is inactive on SW for problems with the antennas those that in this moments are repairing.

The station will be again on air from next Monday 17th April on the usual fq of 15476 kHz from Mondays to Fridays at 1800-2100 hrs.

I need some hep.Trying to find me a rich old widow woman.That 37 year old blonde Bell South woman next door to me,her twin sister who lives in Texas,she is visiting her this this week.She is going to work for the Lower Colorado River Authority thingy in Texas,whatever that is.

Them two wimmins are cutting down some big tree limbs in their back yard so the limbs wont shade their garden too much.I got my big heavy safety belt out of my shed in my back yard with the two big hooks and the safety rope with the two big hooks so they wont fall down out of them big tallllll trees over there.

They are useing my old buddys fourteen feet long aluminum ladder too.They aren't going to get me to climb wayyyyy up in them trees,I am skeered of heights.The Bell South woman's twin sister is skinny, (can you say stringbean?) she didn't have to unlatch the belt buckle on my safety belt,she just wiggled her skinny self on out of that belt.

I have a home made generator I built about 15 years ago.A second hand seven horse power horizontal shaft gasoline engine with a v belt drive to an old car alternator to recharge my big old Sears 12 volt deep cycle marine battery,it works great.

You can do the same thing with a lawn mower that has a vertical shaft engine,just make a bracket for the alternator and put a pulley on the engine shaft,run the v belt out the lawn mower's grass discharge chute.Those wind up AM/FM/Shortwave radios that were made in Africa were good quality radios.Then the company moved to China and the quality went to h..l,I wouldn't trust those cheap no d..n good made in China wind up radios.I always keep plenty of Ray O Vac www.rayovac.com (the best batteries in the World) batteries on hand for some of my radios in case of power outages.

I"m trying to build a clock that uses the WWVB signal to keep its own time. I have everything built and working except the Antenna portion. I have a 1.1mH ferrite rod Antenna.
I know tuning it would require a capacitor that I calculated to be 7700pF. The problem I am having is tuning it. I am not sure how to test it to make sure it is working correctly. I have tried broadcasting a 60kHz signal from a function generator and viewing it on an O-scope and Spectrum Analyzer, but I"m seeing nothing. I"m looking for any suggestions to prove I have this tuned correctly.

Thanks

Sounds like you have created a parallel resonant circuit at about
55khz. Try putting a 100 ohm or so resistor in series with your
circuit. Now put generator across the whole network and sweep the
generator from 10kHz to 100kHz while your scope is across your parallel
circuit. At the point of resonance you will see a larger voltage.

Those must have been older dorms, or dorms in a different part of the country (I'm in California). Most everything I've seen that's in current use is concrete. Of course, if you string a wire up in a tree it's not likely to matter, as I noted.

Since everybody has just been speculating, I took the time to actually
look in Passport. Apparently the BBC has a broadcast out of Oman to "W
Asia" in a language that Passport classifies as "other" that is jammed.
This is on 6090 from 1600 to 2000 UTC. I'm not sure who in West Asia
would be jamming a BBC tx, or who this tx is aimed at. Iran, possibly?
One of the former Soviet republics in that part of the world? Nepal?
Passport breaks out Russian as a separate language, and it's not
Russian.

Military comms are done with satellites nowadays for the most part. On
top of that I suspect awareness of shortwave and of amateur radio is
very low among the typical military recruit pool.

1399. Idiot Cubans still jamming 7160

Newsgroup: rec.radio.shortwave
Date: 2006-04-14 03:10:10 UTC
From: running dogg <run@ning.dog>
Message-ID: <MN6dnQae--IOj6LZnZ2dnUVZ_sidnZ2d@comcast.com>
Source record: 70606

Cuban bubble jammer noted quite strong on 7160 mixing with BBCWS Ascension at BBC s/on at 0300. Hello guys, Radio Republica is NOT THERE ANYMORE! I find it extremely amusing that the Cubans' jamming is apparently so effective that they can't tell that the station is not there anymore. The jamming has been fairly quiet the last few days, but tonight it's back strong and 6035 seems to be off air. I bet that the Cuban exiles running RR are quite happy that their adversaries apparently can't figure out when they stop using a freq and go to a new one. They've been in the clear for nearly a month now. Apparently Cuba can't afford the type of sophisticated monitoring that ensures that China or North Korea doesn't make these sort of mistakes. It's a bummer to be broke.

For the most part, MARS was an interconnect between overseas military and the stateside amateur community, for the specific purpose of relaying messages from military personnel to folks back home. The need for it, especially here in Korea, has been supplanted by cheap cell phones and 4 cents a minute phone cards for calling the states. It's cheaper for me to call stateside on my cell phone here than it is for you to call from state to state.

Payback is a bitch. The whites severely oppressed the native blacks in South Africa for decades. Remember apartheid? It's only natural that the blacks would want to engage in a little dictatorship of the proletariat. Blacks were confined to ghettos and kept in desperate poverty, among other things.

Most factory made radio controlled clocks use a thick ferrite antenna. I
have an Atomic Time wall clock that uses a 6-7 inch ferrite, and my Sony
bedside clock has a ferrite in a bulky enclosure attached with a wire. I
figure that he's got some electrical value wrong, like somebody else
said, but I wouldn't know what.

I'll be darned. I opened up MY FRG-7 and it **IS** full of tubes! I just
naturally assumed when I bought it that it was completely solid state.
How wrong I was.

Anyone have any spare 6V6 tubes for spares?

mike .

Hell, troops doing battle in Iraq have access to email. In fact, they
have better email access than phone access. I suppose that in a
peacetime situation that the need for shortwave is nil. Troops of
earlier wars who had to send paper letters that took months to arrive-if
they arrived at all-or had to line up at the comms center to send
messages over SW would be extremely envious of today's warriors.

Army MARS is very much alive in the USA and is going well. The purpose of MARS is not just to conduct phone patch communications. I have been a Army MARS radio operator for over five (5) years now. It's a great outfit.

Sorry to hear that. If it helps at all, I crushed my thumb in the car door two days ago. The nail should be falling out really soon. I never realized there were so many shades of blue or how difficult it is to go pee without a thumb. I think I'll try sitting down next time. Rumour has it that women have been using that technique for a few millenia.

I think that Sony is phasing out their shortwave radios. That's what
I've heard, anyway. They've already done away with most of their models.
The Degen 1102 has far better ergonomics and almost as good performance
as the 1103, for the same price. I greatly enjoy my 1102, I use it
exclusively for the time being while my Yaesu is out of commission.

Your first guess was right. It's Farsi, according to ILG; so the
transmission would be intended for Iranian audiences.

1411. Reception this evening of RA and NZ

Although the geomagnetic field is unsettled at this time and the space weather indicates that the solar plasma has a negative component of around -10 my current reception of RA is good on 13670, 15240, 15515 and also NZ on 15720 is good.

My usual reception of RA and NZ is that one is much better than the other for some reason but not tonight 04:00 to 05:00 UTC.

On 13670 RA is battling a China domestic 50 KW station where RA is winning.

Looks like things have gotten a little worse as the Kp went to 6
indicating geomagnetic storm conditions from unsettled. I was listening
to RA on 13670 and it was still OK until sign-off.

1417. Reflections on good and evil

Newsgroup: rec.radio.shortwave
Date: 2006-04-14 07:53:16 UTC
From: researchone@lorenzocrescini.it
Message-ID: <1145001196.060864.223870@i39g2000cwa.googlegroups.com>
Source record: 70623

My name is Lorenzo Crescini and I'm Italian. These "Flashes on
Good and evil" reflect the same mood characterizing the Flashes on
the Holy Gospels and Turin's Holy Shroud I wrote in Africa: making
myself useful to our Lord Jesus Christ.
I will start by quoting the best Prayer to Jesus I've ever read.
At the very beginning some reflections concern the devil one.
I thank all those who will read me, write to me, will ask for an
explanation and those who will be able and willing to advertise what
they read by Web, the press or however they like.
I am confident that the last of my Reflections containing a few lined
short account of my life, will be devoted to all of us who are proud
of the Lord.

Web site
www.lorenzocrescini.it/reflections
personal e-mail for communications
ricercapap@lorenzocrescini.it

Best regards

Here are three Reflections as an example

24) One cannot or mustn't say to those who are ill and suffering: "
That's God who puts you to the test". In this way we would offend
The God of Endless Love who cannot wish our suffering. One needs say to
those who suffer: " God's Son himself suffered because of evil, but
you will also resurrect with Him, as He did". That is the truth and
only the truth can give one who suffers the Hope which won't let him
fall into that despair the devil one wants to seize his soul and
conscience! Saying: "it's God who puts you to the test" gives a
suffering man the same relief a learned lecture on food chemistry gives
a starving one.

29) We can give or take from God, Creator of all things, nothing,
except for two things: we can take from Him Honour by offending Him
with our refusal, we can give Him our love, by accepting Him in our
heart! With what insolence might we wish or boast His Light one day,
we, if we had denied Him all life long, being able to believe Him and
not doing that?

38) There are many Evangelic miracles showing the spontaneity of a
memory, neither built nor adapted, which nevertheless is engraved in
the memory of those who were present to the event. It is from conveyed
small details that the truth of the memory of a lived and handed down
episode transpires.

What is so funny, is that you are trying portray yourself as being so
much smarter, in fact superior to anyone else here (in your fucking
mind dipwad) and yet, you keep posting. Its an obsession! You can't
help yourself!

Yet, in reality, you are only making yourself look like a pathetic
loser, by continuing this pointless rant of yours.

These posts were about a moron (which clearly you are familiar with the
term) who keeps fucking up pirate radio. This is a "pirate radio"
forum dipshit! But you appear obsessed with taunting me, pointing out
spelling errors and trying, pitifully, to insult my sexuality, and have
nothing to offer on the topic. If you can't address the topic, its
your who looks like the idiot, retard, imbecile!!!

Now, only in a deluded idiots mind, would that make anyone, but him
look bad. Is any of this creeping through shithead?

So either offer something on the topic, or as you've been told, and it
appears that this word upsets your sensitive nature, but then as we
both know, you homosexuals are "sensitive", GO FUCK YOURSELF. Or
better yet, get your boyfriend to do that Gerbil thing with you and it
might relax you, so you won't be so obsessed with posting, yet another,
pointless rant about me, and not about the topic.

I'm sorry that you missed his point... *Nothing* to do with "feeling
superior", *everything* to do with TV indeed being the great moronizer.

Examples overheard on TV:

Two people talking about a lecture.

"What was the lecture about?"

"About 'Homo Erectus' "

"Oh, he said 'homo'"

Tee-hee, giggle, giggle

"Oh, he said 'erect'"

Tee-hee, giggle, giggle

Maybe funny --- if you're still in the third grade or less.

Another show---"My bowel movement doesn't smell"

Feeling superior or not, is TV the great moronizer? You betcha! And
while you're at it, don't forget "mindless" and don't forget "trash"...

Interesting maybe, but a IMHO just a little bogus. Just some funky shaped sheet metal.

Read the 'Aerials' column by Kurt N. Sterba in World Radio magazine and see how many countries he has actually worked using either a lawn chair or a shopping cart as an antenna, the point being that *any* chunk of metal will work...(maybe not *efficiently*, but it will work).

> How Do ? - The IsoTrons Antennas Work So Well?

So well? The same way a shopping cart can work "so well".

Yes, it has been on the gradual decline for maybe 2 decades replaced by
newer technology. A family member is over in Iraq and we get regular
emails that I assume come via satellite. Those MARS operators provided
a needed and useful service for a long time and should be thanked.

No always so inefficiently; My radio club while teaching elementary
school multiplied the range manyfold of our 100 milliwatt AM station on
1200 khz, when one of the kids hooked the antenna to the steel doorjam
of the classroom...thereby effectively gamma matching the steel cage of
the school building. We could be heard many times the legal distance of
2x lambda x freq.

Feed the parallel LC circuit from the function generator with
a 100k ohm resistor and look at the voltage across the LC with a
scope. you should see an obvious peak when you sweep the frequency.

You can get pretty large mica compression trimmers (?-500 pF), still.
So you could tune with one of those in parallel with some fixed
caps.

California Republic
From Wikipedia, the free encyclopedia

The California Republic (also called the Bear Flag Republic), like the Republic of Texas, was created as a byproduct of increasing tensions between the United States and Mexico. The California Republic was proclaimed on June 14, 1846 when a group of thirty-three Americans captured the town of Sonoma and declared independence from Mexico. Shortly thereafter, U.S. Army Captain John C. Frï¿½mont arrived and took control of the group. The republic's first and only president was William B. Ide, whose term lasted twenty-five days.

On July 7, 1846 a frigate and two sloops of the U.S. Navy, commanded by John D. Sloat, routed the detachment of the Mexican Coast Guard garrisoning the port of Monterey, California in a minor skirmish (the Battle of Monterey), and alerted Frï¿½mont and his men that the Mexican-American War had begun. The "Bear Flaggers" joined the war effort and replaced their flag with the Stars and Stripes. Under the 1848 Treaty of Guadalupe Hidalgo, Mexico formally surrendered its claim over the territory. Though the Republic's Constitution was never repealed, the state of California was admitted to the federal Union two years later.

A significant legacy of the California Republic is the State of California's adoption of the flag (which has a grizzly bear, and the words "California Republic" near the bottom) as the State Flag of California. This was the flag created by Frï¿½mont and his men; this led their actions to be dubbed the "Bear Flag Revolt."

Oh, for people who suffer certain sleep paralysis episodes, the sensed presence of some sorta "shadow people" or like presences can be a very real and terrifying experience. Once upon a time, I used to occasionally experience this sorta thing. It's quite bizarre.

I didn't look to Art Bell's bogus explanations, however.

For info on "shadow people", I'd take a look at the link here:

http://watarts.uwaterloo.ca/~acheyne/S_P.html

and specifically:

http://watarts.uwaterloo.ca/~acheyne/intruder.html

The tabloids have been breathlessly covering Miss Shitfaced for MONTHS. She's dead and thrown to the sharks. No wait, she was sold into sex slavery. No wait, she ran away because she was pregnant. No wait, she's buried in the sand dunes. Give it a rest. I'd hate to be the poor girl's mom. It's like Chandra Levy, the press covered it for six full months, until 9-11. You'd think that they have nothing better to do than report on cute white women who go missing.

If I remember properly you are southern Australia and maybe with in the
first hop so it goes over you.

At my location NZ and RA are a similar distance and you would expect
with both broadcasting the same power they would have similar reception
characteristics but often times one is much better than the other.
Depending on conditions and time of day either one could be much be much
better then the other on the same band. However last night they were
both excellent. RA was only weak on 12080.

I have not checked the RA schedule lately and did not expect to find
them on 13670. I expected them on 13630. They switched from 13670 to
13630 at 07:00 UTC I think. According to my schedule they should have
been on 13630 the whole time.

DaviD - It would appear that the 'original' Illegal Aliens
of Alta Californina were the American Invaders.
http://en.wikipedia.org/wiki/William_B._Ide
http://en.wikipedia.org/wiki/Alta_California
In the summer of 1846, hearing that the Mexican government was planning
to Oust Settlers {Illegal Aliens -aka- The American Invaders} who were
NOT Mexican Citizens, a group of about thirty settlers orchestrated
what was to be called the Bear Flag Revolt. On June 10, upon
successfully taking the pueblo of Sonoma and capturing the Mexican
Commandante of Northern California, Mariano Guadalupe Vallejo (who
supported American annexation), the group raised a new flag declaring a
new country to be called the California Republic.
http://en.wikipedia.org/wiki/William_B._Ide

And way before that... there were the 'original' Original Illegal
Aliens
-aka- the European Invaders of the Americas.
-ps- which included the Spaniards who became the Mexicans.

This is not a new idea to use reactive components as part of the antenna to resonate it at an physical size much smaller than what would ordinarily be needed. This concept is used in many designs usually to normalize the antenna impedance to around 50 ohms so it accepts the transmit energy.

There has been research in the area of reduced physical size antennas on other designs that have shown similar radiation characteristics to full size antennas so on the transmit side it looks like a promising concept.

The antenna designs on this page are extremely reduced and I don't believe the performance claims. The research I have seen that is believable is a physical reduction of about one third on transmit.

However, on receive physical size relates to capture area and smaller antennas, even resonant ones, will not pick up as much energy as a full size antenna. Here small physical size is generally made up for with amplification.

One of the characteristics of an efficient antenna is its ability to couple to the environment around it. Here on the surface of the earth the dielectric is air and since electromagnetic radiation travels at a certain speed in air that means there is a specific relationship between physical size of electrical elements and electrical length where the electrical length determines where the antenna will resonate.

Using reactive components as part of the antenna to cause a "break" in this physical length to electrical length relationship results in the antenna not being as well coupled to the space around it and so it is less efficient.

Pride
From Wikipedia, the free encyclopedia

Pride refers to a strong sense (or desire) of self-respect, a refusal to be humiliated as well as joy in the accomplishments of oneself or a person, group, or object that one identifies with.

In Christianity, pride (or vanity or arrogance) is the essentially competitive and excessive belief in one's own abilities that interferes with the individual's recognition of the grace of God, or the worth which God sees in others. It has been called the sin from which all others arise. Pride is listed as one of the seven deadly sins, as superbia. Pride is also condemned in Hinduism. Ravana, an evil king who was killed by Rama, avatar of Vishnu, exhibited deadly sins of pride and lust. In spirituality pride is linked to the local "I" and ego, as distinct from the nonlocal "us".

In Islam, pride is also forbidden. According to a narration from Prophet Muhammad, he said: "He in whose heart there is as much as a grain of pride will not enter paradise," and a man remarked: "A man likes his garment to be beautiful and his sandals to be beautiful." The Holy Prophet (pbuh) replied: "God, Most High, is beautiful and likes beauty; pride is disdaining what is true and despising people" (Sahih Muslim).

In Germany the word Pride is associated only with the Nazi regime, so this word is a taboo, and also the fact to be proud of his country is not as natuaral as in other countries.

Some languages distinguish between the two senses of pride; in French, self-respect is fiertï¿½ and vanity is orgueuil.

Secondary pride is a little-known but often felt variant of pride. The pride people feel for what their ancestors, children, or country has done is classified as secondary or vicarious pride.

Hubris, or excessive pride, was usually the defining trait that lead to the tragic hero's tragic downfall according to Aristotle.

Hello Everyone - In-Search-Of-A : Kiwa Air Core MW Loop Antenna

For One and All,

Once again here is another one of the Legendary
Kiwa Air Core MW Loop Antenna's on eBay

eBay Auction Item # 9712004478

http://cgi.ebay.com/_W0QQitemZ9712004478

The Opening Bidding is $599 with a Buy-It-Now Price of $749
Plus a Shipping and Handling Cost of $30 .

This eBay Auction Closed without a Bid {SECRET SALE ? }

FWIW - The Highest eBay Auction Price so far paid for a
Kiwa Air Core MW Loop Antenna has been $795 plus S&H.

NOTICE :
This is NOT my Auction and I am NOT Associated with the eBay Seller.

PLEASE NOTE :
That this Message is being Posted for Informational Purposes Only.

know your seller and something about what they are selling.
as always - buyer beware - life is a gamble and so is ebay ~ RHF

Telamon,

There is an inference {allusion} to the fact that the amount
of physical surface area Wire-to-Air in a Half-Wave Dipole
using #14 Wire is the same as the amount of physical
surface area Plate-to-Air in the IsoTron Antenna designed
for the same Frequency Band. These numbers may in-fact
be nearly equal - however . . . iane ~ RHF

Dale [W4OP],
"The consensus is that the coax is the actual radiator;
the "antenna" is the matching network.
The longer the coax, the better it works. "

So the IsoTron Antenna :
Efffectively puts the Antenna Tuner at the Far-End of the
Coax Cable and makes the Coax Cable the Antenna
Element {Radiator} between the Transmitter and the
IsoTron {Resonant Load = Terminator} Antenna.

interesting idea - iane ~ RHF

Emancipation had little to do with it. That was just the 'feel good'
factor. Control of the Southern cotton crops to feed the northern
factories cheaply was a much more likely cause of the invasion.

The carpetbaggers got everything at pennies on the dollar and the
northern business interests got the whole ball of wax. Even the taxes
were changed so as to be unpayable by the former owners and countless
plantations were sold off to northern interests to cover these
delinquent debts.

Every war has it's buzzards and parasites. The worst ones are those
parasites who actually START the wars for their future feeding frenzies.
Does that remind you of any present day situations?

Maybe you should try the AN-LP1 before you knock it on the net. It's one of the best value loops for the money.

The cheapest Wellbrook is the ALA-100. It is just the amp and interface electronics. You supply the antenna. It costs the least to ship as well since they are not sending an enormous loop.

To get decent AM reception, the loop has to be about a meter. You can roll your own antenna in any number of ways, using a square about 3ft on a side.

I'm using a multiturn loop (3 turns with about 9 inches between the turns). The signal on some local BCB is strong enough to turn on the antennuator in my radio,. You need the wide spacing between turns to keep the loop resonance high enough for shortwave operation.

The Wellbrook goes lower than the datasheet spec. I've picked up that 24Khz signal coming out of Washington state.

We get "When Radio Was" on WBBM weeknights, midnight to 1 AM Central.
Unfortunately, tonight it was "The Jazz Singer" with Jolson. But
Tuesdays they're running a five-part Johnny Dollar that's not on the
CD I bought at a hamfest.

I think you will find that the shortwave radios available for sale today are as a group quite reliable. It would be very difficult for me to say that one is distinctly more reliable than all the others.

I recommend that you focus on features and performance instead since those criteria will have a much bigger impact on how you enjoy the radio.

You don't need a modem, you can use your computer's sound hardware if it has a line input. For software, look for "wxsat". It was mainly written for satellite use but it has a setting for shortwave broadcasts. Hint: the shortwave setting is named "FM", because it refers to the modulation of the video onto the audio rather than the audio onto the RF.

For a price, Wellbrook supplies the loop. As I said, the ALA100 is the
cheapest wellbrook solution, but it is not the only solution.

http://www.lazygranch.com/images/radio/bigassant.jpg
This beast is 10ft on the diagonal.

http://www.lazygranch.com/images/radio/loop1.jpg
This is 4ft on the diagonal.

You need to suspend the wire rather than wrap it around something.

I agree. A good radio with sufficiently fine tuning can make ssb
transmissions crystal clear. For a real aural treat catch one of the
nets that sends in AM.

It is more than an interesting idea, it is what is happening.
Additionally the tower is a radiator along with the coax. The tower
probably radiates more than the coax. The "antenna" is really a matching
network to the tower.

Dear Mr. Brown,

The Sony ICF-SW7600GR receiver is not only a superb performer for a small portable, it is very ruggedly-built as well. I have five of them (the oldest dating to 2001) and two of the predecessor model, the ICF-SW7600G (purchased in 1998 and 2000). None has ever given less than perfect performance and I take at least one of them wherever and whenever I go on trips/vacations.

You do not need an AC adapter at all. The radio is extremely easy on batteries. I recommend buying two sets of rechargeable NiMH batteries (each cell having at least 2000 mAh) and a suitable charger, preferably one with a DC adapter that can be used in a car. You'll never run out of power and I think you'll be extremely pleased with this radio.

The only other option I would recommend, if you can find one, is the now sadly-discontinued (in the US) Sony AN-LP1 antenna which is a perfect match for this radio. Like the radio, the antenna is very well made and travels easily.

There are probably other brands which are also well-made, but, owning seven of these (as well as two Sony ICF-SW35s) I can confidently state that Sony shortwave radios are made to a high standard.

Best,

Joe

P.S. Avoid Sangean models. I have been disappointed with the construction quality of three of them.

It would be better to just drop him in the kill file. The AN-LP1 is a
good performer.

Use the slow AGC selection on the radio if it has one to quiet the
noise between the words people speak on sideband.

Careful main tuning (VFO), passband tuning and filter selection will
cause the sound quality to be very good and not muddy.

I haven't seen you post much here, so I'll give you the benefit of the doubt.

Radio-Mart is a(n) (in)famous E-bay seller. Some people here criticize him to buttering-up his listings.

The Chinese seller who copied one of his auctions wholesale, down to the picture saying that he had posted many items (when it appears to be his only auction), and wants Cash, is going to scam someone out of his money, most likely. My intent in posting is to warn the community.

OK, I might as well join the crowd and also recommend the Sony 7600 as I
have owned one for years and I am very happy with the performance. I
have had no problems with the radio.

I own a Sangean with the Radio Shack branded DX-380 that is still
working fine. Construction quality is on par for a cheap portable. This
radio performs well and I have not had any trouble with it either. Maybe
the quality had gone down hill the last few years but I would not know
about that situation.

Source record: 70906

Dear Cuhulin,

The Wellbrook loop antennas are certainly "better" than the Sony AN-LP1, but they are far more expensive and they are not "portable."

The best Wellbrook antenna for both MW and SW reception is the ALA 1530 but, frankly, you need a "top" shortwave receiver to take advantage of it - such as an AOR AR7030 Plus, a Japan Radio NRD-545, a Ten-Tec RX340 or 350D, or a (modified) ICOM IC-R75. A better "Wellbrook" choice for shortwave is the model I have - the ALA 330S, but this is even more expensive (and for both Wellbrooks you must purchase locally a suitable length of the proper coaxial cable [RG-58C or RG-58C/U] and a few connectors [all of which are "spelled out" in the instruction sheet and are available at Radio Shack and other outlets]). AND you really need a rotator to best take advantage of the antenna's directional characteristics. Is it all worth it to you? It is to me - I own TWO of the Wellbrook ALA 330S antennas, both mounted atop Radio Shack rotators, and both mounted in my attic. Their performance is nothing short of superb, better than anything I have ever owned, especially in the summer when "static" and other atmospheric noise is at its highest. (One is used with my Grundig Satellit 800, the other, needless to say, is used with my AOR AR7030 Plus and in almost fifty years of shortwave listening I have never heard, much less owned, a better combination than that one!)

Frankly, though the Wellbrook antenna does indeed work extremely well with the Sony ICF-SW7600GR (I've used it with my Sony), it ir really "overkill" for this or any other portable. Especially regarding the ALA 1530, you must have a radio with superb image rejection; this is something in which NO portable excels. (Even some tabletops are not so good in this regard!) In other words, to get the most out of a Wellbrook antenna, you must own a radio with such characteristics as to be able to take advantage of it.

The Sony AN-LP1 is a SUPERB match for the '7600GR. Not only does the combination perform extremely well but they both "travel" very well indeed. Note that the AN-LP1 is strictly for shortwave reception, not MW.

Whether the AN-LP1's price is worth it to you or not is something only you can determine. Do not concentrate on what the antenna "looks like" or what you "seem" to get for your money - you are purchasing performance and I can state categorically that the AN-LP1 along with the '7600GR makes a great combination. I ought to know - I own FIVE '7600GRs and FIVE AN-LP1s!

Best,

Joe

Oh, I've read enough of the nonsense posted about radio mart to know
where this is headed. I've come to realize that some on this forum are
apparently small time dealers threatened by his success. I think it is
clear that one of those individuals (certainly not you I'm sure) missed
the excitement of those never ending radio mart threads and dummied up
that auction listing.

Why that group is so fixated on that one seller is beyond me.

IT'S GOOD ENOUGH FER GUMMINT WORK which iirc was where it began , in

Korea, I think.

there was an excellent slinky site now dead that acknowledged it had shortcomings as a transmit antenna outisde its resonance (7.2 mhz) but mine went up to 15 mhz as a receive antenna falling off as frequencies elevated. Above 17.6 mhz it was worthless

I prefer my North county active SWL antenna which on a 10' PVC pipe mast works BCB to 28 mhz

If you buy the wrong Sony AC adapter, or any unfiltered adapter, you will have nothing but noise.

Sony made AC adapters ARE available that work very well with ALL their shortwave radios. I know because I have Sony AC adapters for the 7600GR, SW100, SW-07 & SW-55. They all work exceptional well and are very quite. Except that their price is prohibitive for most people in this newsgroup.

Wrong. Your so called perception of loudness in either sideband is the
nature of listening in USB Vs. LSB. That so called difference can be
perceived on any SSB capable radio. Your simply trying to make an issue
against a manufacturer for which there is absolutely no basis. Which is
typical of our resident propagandist, Dr.DaviD.

This news group is a good forum to report the results of used radio
transactions as people need to buy a radio in order to participate in
the hobby.

He apparently was good at stretching the truth and some people felt
they got screwed. As an impartial observer it seems to me that he had
many auctions and didn't want to take the time to write a specific
advertisement for each radio and generalized on previous ads that
generated a good response. I will give him the benefit of the doubt on
the way the advertisements were written.

It people see a suspicious auction they do us a favor to reporting it.

The problem with this type is that the current distribution along these shortened antenna elements will not be correct or sub optional. This is fixable problem though, which will require more "structure" to solve.

Cuhulin,

Better yet, take your 24 Foot Extension Ladder
and separate the two pieces.

Lay the two sections of the Ladder on the ground
in a straight-line with the inner-ends about a foot
apart and use a Plastic Tote Box (4) at the end of
each piece to prop them up off the ground.

Connect a piece of Ladder Line for the feed-in-line
to the inner-ends.

You have a Ladder-Ladder Dipole Antenna that is
just above the ground.

Should work pretty good around 9.75 MHz.

SSB is fine if you have a small step size in the VFO (if digital), and
a stable frequency source.

I have no evidence to back this up, but AFN seems to be wider bandwidth
SSB than what is normally used in comminications. I generally use a
4Khz filter on AFN as it sounds better.

Hi Ron,

Hmm... I see what you mean; they no longer list a receive-only model. After they stopped offering kits, they did still show a receive-only, totally built version (which is what I bought in January).

I know that Flex just disables the transmitter portion of their 1-watt transceiver model, and sells it as receive-only. I believe you can specfically ask to buy the receive-only, and they'll just sell you the $925 1-watt transceiver with the transmit parts disabled. They may also remove (or not include) the cooling fan; mine has just the grill in place with no fan behind it.

As you might imagine, 99.9% of their customers buy the radio for 2-way use, so that's what they feature on their site. I'm sure you can still get a receive-only version, but it's evidently by request.

By the way, from what I've been reading on their e-mail reflector, their customer service is top-notch, rivalling the experience I've had with Drake and AOR-UK in the past.

Guy

>>
>> On to the few TP medium wave loggings:
>>
>> ----------------------------------
>> 558 JAPAN JOCR, Kobe, Apr 10 1307 - Japanese female pop music tune to
>> 1310 female announcers in Japanese. Korean language heard in background,
>> tentatively HLQH, KBS 2. Fair level. (Atkins-WA)
>>
>> 594 JAPAN JOAK Tokyo, Apr 9 1220 - Slowly building signal at tune-in
>> 1220, with lively Japanese conversation with male and female announcers.
>> Numerous mentions of Tokyo. Fair to good level. Best reception in the
>> SDR-1000's Binaural-SSB mode, which spreads the noise frequencies
>> left-to-right on stereo headphones, allowing for better concentration on
>> the voice frequencies. Also noted 4/10 with a strong signal at 1322.
>> (Atkins-WA)
>>
>> 612 AUSTRALIA 4QR Brisbane, Apr 10 1318 - Male and female announcers with
>> talk in Aussie-accent English; mentions of Brisbane and Adelaide.
>> Parallel to a weak 774 3LO Melbourne. Fair to good level. (Atkins-WA)
>>
>> 612 NEW ZEALAND 3XG Radio Rhema, Apr 9 1334 - Tentatively 3XG with choir
>> music, male announcers in English with Kiwi accent. Seemed to be
>> discussing church matters. Weak signal. (Atkins-WA)
>>
>> 667 UNIDENTIFIED Unid, Apr 10 1315 - Weak, QRMed signal, too messy to
>> identify language 100%. Seemed Japanese or Korean. (Atkins-WA)
>>
>> 774 JAPAN JOUB Akita, Apr 9 1235 - Strong signal of male announcer in
>> Japanese, and parallel to 828 JOBB Tokyo. Scraps of Aussie-accent English
>> in the background, possibly 4TO Townsville. (Atkins-WA)
>>
>> 828 JAPAN JOBB Tokyo, Apr 9 1248 - Fast-paced interview or radio drama at
>> a very good level. Parallel to 774 JOUB Akita. 3+1 time pips and NHK2 ID
>> noted weakly during a fade at the top of the hour (of course), but signal
>> back up at 1303. (Atkins-WA)
>>
>> 873 JAPAN JOGB Kumamoto, Apr 9 13012 - Weak signal of male talk in
>> Japanese, and parallel to 828 JOBB Tokyo. (Atkins-WA)
>>
>> 891 AUSTRALIA 4TAB Innisfail, Apr 10 1332 - Right at tune-in I caught
>> 'Radio T-A-B Australia' ID at 1332, followed by man and woman chatter in

>> English. Good level, but faded quickly. Is this their typical ID without
>> the '4' in 4TAB?. (Atkins-WA)
>>
>> 891 UNIDENTIFIED Unid, Apr 9 1344 - Very weak signal of two male
>> announcers in English, possibly Kiwi. Perhaps 2XW, Wellington? Stayed
>> with signal and noise for 10 minutes, but it eventually faded out.
>> (Atkins-WA)
>>
>> SHORTWAVE
>> --
>>
>> AUSTRALIA 2310, 1145-1150, VL8A Alice Springs Apr 10 Music program with
>> West African kora music and vocals, introduced by announcer in English.
>> VL8K Katherine in parallel, but both outlets extremely weak. Retuned at
>> 1405 to find MUCH stronger, clearer signals on both frequencies. Still in
>> audio (very weak) at 1545 (2.25 hours past Grayland sunrise). (Atkins-WA)
>>
>> BOTSWANA 4930, 1520-, VOA Moepeng Hill Apr 10 James Taylor's 'You've Got
>> a Friend' at 1520; announcer in English with mentions of VOA, and gave
>> Web address for VOA Music Mix twice ('www.voamusicmix.net'). Announcer
>> greetings to listeners in Malawi, Uganda, and India. Into more light pop
>> music 1526. At 1528, the announcer mentioned the name of the program as
>> 'Border Crossings--the music of the world.' Into news items 1530,
>> including trade show fire in India. 'VOA News' ID at 1531. Surprisingly
>> good signal at 2 hours past Grayland sunrise. (Atkins-WA)
>>
>> DJIBOUTI 4780, 1450-1510, R. Diff. TV de Djibouti Apr 10 Male announcer
>> in Arabic with pres. Koranic recitation at tune-in; Horn of Africa music
>> with vocals, stringed instrument, and percussion at 1454. 'Techno piano'
>> sound effects at 1500, then announcements and a fast '...wa Radio
>> Djibouti' ID by man. Into news items, with various mentions of 'shariya'.
>> Some CODAR QRM. Reception was a half-hour prior to Djibouti sunset, and
>> 1-1/2 hours past Grayland sunrise. Fair at tune-in, but the signal
>> dropped down into the noise by 1510. Very pleased with this catch, the
>> best tropical bands log of the DXpedition. (Atkins-WA)
>>
>> GUYANA 3291.1, 0518-0528, V. of Guyana, Sparendaam Apr 09 BBC relay in
>> English, with 3-way roundtable discussion of political parties in the UK.
>> Fair, and slowly improving signal. (Atkins-WA)
>>
>> INDONESIA 3345, 1232-1241, RRI Ternate Apr 10 Brief talk in Indonesian by
>> male, with another announcer in unid. language (not Arabic, but perhaps
>> tribal or hill country lang.); mentions of 'Koran' and USA, with crowd
>> noises and applause in background. Good signal. Retuned at 1410 to find
>> female announcer in Indonesian and lagu romantik music. (Atkins-WA)
>>
>> INDONESIA 3976, 1411-1418, RRI Pontianak Apr 10 'How Great Thou Art' hymn
>> in Indonesian at 1411; Male announcer with many mentions of Pontianak
>> 1413, followed by telephone report from a live event with auditorium
>> noises in background. Excellent signal and audio. Still going strong at

>> 1545 recheck (2.25 hours past local sunrise). (Atkins-WA)
>>
>> PAPUA NEW GUINEA 3205, 1200-1217, R. West Sepik Apr 10 ID at 1200 in
>> English, followed by world and PNG news items. Weather forecast for PNG
>> at 1204, including mention of severe thunderstorms for Wabag region.
>> Weather in Pidgin 1205, brief flute music, and more talk in Pidgin with
>> numerous mentions of Vanimo. Catchy Melanesian tune at 1210. Good signal.
>> (Atkins-WA)
>>
>> PAPUA NEW GUINEA 3235, 1217-1219, R. West New Britain Apr 10 Fair to good
>> signal of female announcer in Pidgin, introducing PNG musical group with
>> Melanesian pop tune. Some utilities QRM on USB. (Atkins-WA)
>>
>> PAPUA NEW GUINEA 3325, 1220-1231, R. North Solomons Apr 10 Log drums
>> music to female announcer in Pidgin at 1223; primative-sounding vocals
>> and flute and wood flute music at 1224. US pop tune at 1230. Fair signal,
>> but wedged in tightly on both sides by adjacent-channel ute QRM.
>> Presumed. (Atkins-WA)
>>
>> PAPUA NEW GUINEA 3365, 1241-1248, R. Milne Bay Apr 10 Tentative. Very
>> weak signal of two male announcers in probable Pidgin language, followed
>> by pop music. Signal was barely above the noise floor. (Atkins-WA)
>>
>> PAPUA NEW GUINEA 3385, 1248-1303, R. East New Britain Apr 10 Melanesian
>> sing-sing music at tune-in, followed by 'Young Love' 50s tune. Male
>> announcer in Pidgin 1258 with mention of Rabaul, PNG, 'meter band', and
>> 'frequency'. Into old bluegrass Gospel tune. Fair to good signal.
>> (Atkins-WA)
>>
>> PAPUA NEW GUINEA 4960, 0920-0923, Catholic Radio Network Apr 10 Presumed
>> CRN here, with Christian contemporary music and introduction to
>> selections by woman announcer. Fair level, and noted again at 1135 with
>> barely audible signal. (Atkins-WA)
>>
>> PAPUA NEW GUINEA 7120, 0910-0913, Wantok Radio Light Apr 10 Noted in
>> passing with strong signal with Bible reading and commentary by man and
>> woman in English. Presumed. (Atkins-WA)
>>
>> SOLOMON ISLANDS 5019.9, 0845-1118, SIBC Apr 10 First noted 0845 with
>> island music and reggae tunes; good level. Poor signal at 1107 retune
>> with female announcer reading South Pacific regional news items in
>> English. Into Bible reading by man at 1115. (Atkins-WA)
>>
>> SWAZILAND 4774.98, 0415-0432, TWR, Mpangela Ranch Apr 10 Talk by male and
>> female in German, to German folk music at 0427. 'T-W-R' ID in English by
>> male announcer at 0430, followed by Web address. Into 'Focus on the
>> Family' with Chuck Swindoll at 0431. Good signal. (Atkins-WA)
>>
>> VANUATU 3944.8, 0837-1105, R. Vanuatu Apr 10 Male announcer in Pidgin
>> with intro to island music selections; mentions of Vanuatu. Fair to good

>> signal. Retuned at 1101 to find a considerably weaker signal, with a
>> sermon or devotional in presumed Bislama and 'pray for the peace of
>> Jerusalem' mentioned. (Atkins-WA)
>>
>> ZAMBIA 4910, 0448-0453, ZNBC, Lusaka Apr 10 Tentative. Sermon or
>> preaching in unid. African language by male. Poor and weakening signal,
>> about an hour past Lusaka sunrise. (Atkins-WA)
>>
>> ZAMBIA 4965, 1533-1538, R. Christian Voice Apr 10 Typical Christian
>> programming in English, with children's drama program, sound effects, and
>> teaching on Bible principles. Fair to good signal, but losing to the
>> increasing band noise. VOA Botswana also in at this time. (Atkins-WA)

Hi Mark,

Some years ago I did check out Ledbetter Point when I was roaming around there with a DXer friend. The problems we noticed with the location were:

-lack of beach-access roads once you get north of the populated tourist areas (the Willapa Wildlife Refuge to the north of Ledbetter Point State Park is even less accessible)
-serious-looking signs at the state park entrance regarding the sunrise-to-sunset operating hours

Without being able to scope out the beach in this area, we had no way of knowing if it would involve carrying our deep-cycle batteries and DXing gear a distance, or if a car or 4x4 could get to a suitable feedpoint location for the Beverage antennas.

Guy

The only problem I've had with sideband on Sonys (I had a 2010 for a couple years) is that they're not tunable. You press a button and hope that the transmission will be tuned correctly for the radio, if not you're SOL. As I was using my 2010 to chase pirates, and most US pirates broadcast in SSB (because they use ham equipment) this was quite frustrating. I finally traded it to somebody in Maine in exchange for my Yaesu FRG-8800. (This was before Ebay.) Even the Degen 1102 has tunable SSB. The Realistic DX-440 (Sangean 803A) had tunable SSB. If you're trying to listen to SSB transmissions (such as US pirates or hams) the lack of tunable SSB on Sonys will drive you nuts. OTOH, they're excellent for listening to regular broadcasts. Sadly, they're all discontinued now from what I know. Search Ebay, or settle for something Chinese, probably the Degen 1102 or 1103.

It happens sometime

Theres nothing on TV
youre left alone in the House. Theyve all gone Out
You cant sleep.

I need something done. Please.
It all depends if youre on top of this net thing.
With my eyes Im not.So I know somethings are better left alone.
I need some voice tracks of your posts here sent by talking email
If you dont have something to send us audio with you can go here
http://www.radiotalkback.net/page2.html
and here to download a free talking email program
http://www.aussieseek.com/radio.html
Youl need a Microphone (Cheap little one from
Tandy or thingy Smith) for your computer
So What you need: is
A computer microphone plugged into your sound card.
An email program on your computer (like Outlook Express)
setup to send email.
Download the free Voice Email plug in and
following the prompts to install it on your PC
Then youre ready to go

The address to send the talking emails or audio
to Sean at Aussieseek/lLR support is.
talkback@zfm.com.au (Email displayed on

http://www.radiotalkback.net

Here are the Scripts I need it read slowly and clearly.

Select one or the other or Do Both

Hi This is (Your first name or both names if you like)
>From (Name of Town) in (country)
Heres what I think about...(a comment about anything
About 30 Seconds).
And thats my Talkback Topic

OR-- A station ID

Hi Im (your name) in (Town and Country)
Youre Listening to ZFM Australia

If anyone can do that
Please Help and send your voice track of a station ID

or a comment track to
talkback@zfm.com.au) Email displayed on

http://www.radiotalkback.net

Thanks

Keith 1900 93 6397/Zfm.com.au/radiotalkback.net

For One and All,

A little more 'About' the Flexo SWL Aerial
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/9051

Flexo SWL Aerial. {Flexo Shortwave Listener Antenna}
An Antenna / Antenna-Switching System than improves Shortwave
Reception by adding Flexibility to a Single-Antenna System, making
it seem as if you have more than one Antenna. Gives you more choices
in Antenna length, angle-of-signal arrival, and propagation conditions.

- - - Subject : Flexo SWL Antenna Questions ?
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/9047

Back in the mid 80s there was an excellent electronics magazine
called Hands-On Electronics. In the May/June 1986 issue was an
Article by Ed Noll [W3FQJ] called "Flexo SWL Aerial".

I always wanted to try this Antenna, now I will have the time and
room to put it up.

There are two problems, I have the original Article but I don't have
the Correction for the Control Box that appeared in the next issue.

The second problem is I have looked all over the internet for
Ed Noll -or- W3FQJ. All I get are sites selling his books,
no web or home address.

So, I Need Help.

Does anyone remember the magazine and kept the article
and correction?

Anyone who belongs to other groups will see this post again
and again, etc.

1601. Re: SW Indoor antenna

Newsgroup: rec.radio.shortwave
Date: 2006-04-16 02:58:38 UTC
From: Joe Analssandrini <analssandrinij@yahoo.com>
Message-ID: <1145156318.517749.150540@j33g2000cwa.googlegroups.com>
Source record: 70808

Dear Mr. Cankurt:

You probably can't. An outdoor-mounted antenna will always outperform an indoor-mounted one (and I personally have two Wellbrook Loops mounted in my attic - this is because of restrictions in the community in which I live).

Why not try a little trick I used to good advantage many years ago: Run one of the connecting cables through a clotheline pulley system (with a weight on the free end). This will allow some flexibility in your antenna wire so that it won't snap in a high wind or heavy snow. This worked well for me.

Best,

Joe

The only things I tote when I go shopping is my keys and my wallet and my checkbook and my clothes and shoes on my fat old ugly body and my eyeglasses,I dont even tote my wristwatch anymore.Yerra,I can float a couple of hundred dollars (when I save it up,that is) for a Wellbrook antenna.Way I see it is,if you are going to spend a bunch of money,might as well buy the best.

Them wimmins next door are out of town somewhere since Friday morning and they probally wont be back untill tomorrow night,as usual.The Bell South woman has gone fishing over near Monroe,Lousiana.(I told her to get a can of sweet corn and poke some holes in the can and hang the can in the water) Her skinny twin sister,yesterday morning,she had on a long sleeved white shirt and black slacks,I dont know where she has gone.The other woman,I guess she is spending the weekend with her boyfrind,or she might be in Minnesota again,trying to get custody of her three kids.

The Bell South woman who is buying that house next door to me,she showed me where she keeps a spare key to her house hid out.My little doggy took me out in my front yard a short while ago and I heard their little Jack Russell puppy doggy in their house yipping about whatever.So I put my doggy back in the house and I go to their house and check on their doggy and their cat and their big rabbit in that cage behind their house.At least they let me read their Clarion Ledger newspapers for free.When they are gone for a few days,I pick up their newspapers and hold them untill they get back over there.

I need to do some scaping and painting on top of my house.But I have gotten too fat and wobbly to get up there anymore.(it isn't the falling down,it's that sudden stop that gits ya) I was talkng to the Bell South woman next door about that about a week ago.I told her I would pay her some money if she wants to get up there.She said she would be glad to do that for me.

She got up there on my old buddys 14 foot long aluminum ladder a couple of days with her electric chain saw in her back yard to cut down a few tree limbs.I told her if she doesn't feel safe up there,dont do it.Her skinny twin sister (they had the top of the ladder tied to the tree with a piece of rope) put on my heavy heavy duty safety belt with the big hooks on it and my safety rope with the big hooks on it and she scampered up that ladder like a monkey and cut them tree limbs down in no time flat.I own two sets of climbing spikes too,the kind you strap on your legs,one set is for climbing poles,the other set have longer spikes/spurs on them for climbing trees.

We wish him well and hope things work out. Photos of the wedding can be found on
<www.coasttocoastam.com> Some details I recall: The bride is in her early 20's and Art is 60. They will live in a Manila high-rise on the 19 floor and Art expects to put up an antenna for his ham station. Divorce is illegal in the Phillipines. His bride does not want to live in the USA. His cars for sale include a Camaro, a couple of Geo Metros and a hot rod Firebird. He also has a big RV. His ham gear includes some serious amplifiers. Offers for the property and chattels are to be sent by fax only. He will originate his broadcasts from Manila in a few weeks. He seemed quite happy. That's about all I recall but he may have more tonight.

Im still looking for a uhf scanner/receiver with excellent uhf
sensitivity. So far ive found
Icom r7000s that vary quite abit in price (is there a older & a newer
version) ? Also the
r8500 thats quite abit more. Does anyone know whats the big difference
between the two
and if all r7000s had the same uhf sensitivity?

Source record: 70844

Dear Mike,

To comment:

The original AC adapter Sony made for the ICF-SW7600GR was a very good one. However, that model was discontinued a couple of years ago and has been replaced with one with a similar name but dreadful performance with the radio.

Most AC adapters for the '7600 are priced in the $15.00 - $20.00 range. This is very high for what you get. The price for eight rechargeable NiMH batteries and a charger is not much, if any, more and you get portability which is just as good AND FAR QUIETER operation. As the '7600GR, off its whip, is not the most sensitive of receivers, this quiet operation is very important. Even when used with an AN-LP1, which affords excellent "hearing of signals," battery operation is, in my opinion, far better than use with an AC adapter.

Note that I'm not "knocking" the receiver - it is designed with a better-than-the-portable-average dynamic range so it can handle a fair external shortwave antenna without overloading. (Its MW sensitivity is superb with just the internal ferrite antenna.) Its SW sensitivity off the whip is adequate for the more powerful stations and the radio is sensitive enough that you can in fact do some DXing with it just with the whip. However the ability to handle an external antenna without overloading is much more important, in my opinion, than "raw" sensitivity off a whip.

Best,

Joe

P.S. Universal's AC adapter for the '7600GR is not only dreadful, but also overpriced. I understand you can buy the same adapter from another source for 1/3 Universal's price but even then - why would you want to? I have one and if you like music and want to hear your radio "hum," that's your adapter! ;-)

It's an obscure receiver. Doubtful you will find much on it. It may have
been made by Panasonic?

Sony Part# 147612111 $94
ADAPTOR, AC (AC-E600)
Input AC 110-120V or 220-240V ~50/60Hz 7 Watts
Output DC6V ~ 300mA
Requires "World Traveler" type AC "Conversion adapter" available at Radio
Shack or Sony part# 156900821 "Conversion adaptor". Ref:
http://kropla.com/electric2.htm

Sony's U.S. version 6V AC Adapter (110-120V input only) for a 7600GR is
"AC-E604". But that model is difficult if not impossible to find. The
"World Traveler" version is above is still available and can be used with
any Sony shortwave radio requiring 6V (Ex: SW-55).

1663. Q: FM Antenna & Ground Isolator

I need advice on the following -

I have a Magnum Dynalab ST-2 antenna
(http://www.magnumdynalab.com/fmantenna-st2.htm) that I am mounting
adjacent to my chimney. It will connect to my FM tuner via RG6/RG59. As
I understand it, I also need a ground block as shown here:
http://www.seniorindustries.com/static%20pages/Hardware/BGHGroundBlock.html

Is using one typical good installation practice? Should I be worried
about insertion loss or is it not likely to be noticed? I apologize for
the extreme n00b questions but I am what I am.

I will appreciate any comments.

??? ??? I recently picked up a used 2010, and it tunes SSB (on the ham bands, certainly) just fine. I go to a frequency, punch in USB or LSB, and the signal is there -- adjust the manual tuning up or down if necessary, but it's there.

I am in an apt. I use 50 feet of bare copper wire strung around the ceiling, and then a 20 foot Zep Wire as the feedline, and I get real fine reception. I also us a Kaito Loop antenna that mounts in a window, that is much better than I expected. I also have some of the 20 fot reel antennsa. I put one in the bedroom, one in the living room, and then join them into a double mono min-plug for an indoor dipole, which is fair, but not great, but is quite and picks up all the big gun stations. These are for portables. You can also use an antenna tuner to place in between, if your poratables overload, I use an older MFJ-959B, which helps a great deal.

My old desktop receivers work fine with just 30' of wire attached to the antenna terminal. I have improvised many different types of apratment antennas over the years, and have had good results, but there is nothing like an outdoor random wire.

Frank asks the hard questions this week.

Are we fools? Or are we slaves? As in the film Gladiator, are we as a nation going from free men to slaves? Would we restore the Republic? Are we even still living in a Republic? Or a mob-ocracy? And where is our representation in government? Frank concludes that We have gone from civilized law to "jungle law" or to the "mob-ocracy" - he who screams the loudest gets the service.

John explains how White America is under attack, and how the Left looks to destoy American's way of life through the immigration issue.

Also, Australia calls in to the show for the first time... Easter celebrations in Iceland... segregation making a comeback?... your calls at 718-761-9996 and much more.

IC W32A, it contains enough memory to add all the 2 meter repeaters
and common simplex frequencies, and can monitor all the weather radio
stations, and, as a bonus, operates on 70 cm as well.

Don't forget to have a copy of your amateur radio license...

Source record: 70860

I bought a Sony SW7600GR a month or so ago and two weeks ago I bought the Sony power supply adapter recommended for the radio.

Yesterday I unplugged the adapter to check and changing batteries if required, (Ni Cads) and when I re-plugged the adapter into the radio it indicated no battery! I thought that the battery was shot but as soon as I unplug the power adapter the radio will kick right back in. It had me quite puzzled for a bit but then I noticed that there was no metal positive socket on the tip of the adapter plugin. I had plugged and unplugged the adapter several times before with no problem but this last time the positive socket must have remained where it was on the positive pin when the plug was removed.

I think that I can see the collar of the positive tip on the positive pin down in the hole but I am not 100% sure.

Now the question I want to pose is: Is Sony responsible for getting the old positive tip out of my radio, along with replacing the power supply adapter

PS Has anyone ever had this happen to them??

1) Turn the radio on
2) Press the AM button; cycle it until it shows MW
3) Turn the radio off.
3) Press the STEP button (it will toggle between 9 and 10). Toggle it
to 10 and wait until the clock time returns (about 5sec)

That should do it.

I found it interesting that just before Hurricane Katrina (well, two days before), the Radio Shack's, in New Orleans still had lots of stock of Grundig crank radios left. Now, I know there are more essential things, but when you're sitting in a shelter for four weeks, that Weather band/AM/FM/TV-audio/Cell phone charger/LED flashlight radio might come in handy.

MRb,

Magnum DynaLab ST-2 Antenna
<http://www.magnumdynalab.com/fmantenna-st2.htm>
FM Half-Wave Vertical, Omni-Directional FM Antenna

IMHO - A "Grounding Block" is generally always good
practice for Electrical Safety and Noise Reduction.

With a good mechanically constructed Grounding Block
and properly Fitted "F" Connectors on the Coax Cable
you should have very little insertion loss and you will
not notice any loss of signal.

"I found it interesting that just before Hurricane Katrina (well, two
days
before), the Radio Shack's, in New Orleans still had lots of stock of
Grundig crank radios left. Now, I know there are more essential
things,
but when you're sitting in a shelter for four weeks, that Weather
band/AM/FM/TV-audio/Cell phone charger/LED flashlight radio might come
in
handy. "

Hindsight is 20/20.

When you on the Gulf Coast, you become complacent about
hurricanes...the West Coast earthquakes, the Midwest tornadoes, etc,
etc.

The last few hurricane seasons have begun to change that....a little.

When I see people paying over a million for a condo on the Florida
coast, I consider Mother Nature will need to do a little more
convincing before they take the hint....people are slow learners.

1749. Three-in-Plain-View Clothesline [Hidden] Antennas for the Shortwave Listener (SWL).

Newsgroup: rec.radio.shortwave
Date: 2006-04-17 09:33:15 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1145266395.532957.156410@i40g2000cwc.googlegroups.com>
Source record: 70957

For One and All,

Three-in-Plain-View Clothesline [Hidden] Antennas for the
Shortwave Listener (SWL).
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/9071

A good old fashion Coated Wire-Core Clothesline that has a Pulley
on each end can be an effective External {Out-Side} Antenna for
Shortwave Listening (SWL) for those who must 'hide' their Antenna
from the Neighbors.

FIRST - THE BASIC CLOTHESLINE [HIDDEN] ANTENNA :
{ Basic Longwire Antenna Design }
1. Wire Core {Metal} Clothesline
2. Two 5"-6" Pulleys one for each end of the Clothesline.
3. Three Strong 2"-4" Ceramic Insulators are required :
* One (2) between each of the Pulleys and their Supports.
* The Third one (1) between the two ends of the Clothesline
to hold the Ends Secure and Separated to form an 'open-loop'
Wire Antenna Element. Double Wrap the Clothesline Wire
Through the Ceramic Insulator's Holes and Remove the Outer
Insulation and Expose the Inner Wire. Use Metal Clothesline
Fasteners to Lock the Clothesline-in-place and ensure that
they have good Metal-to-Metal contact with the Inner Wire
of the Clothesline. {Electrical Continuity}
NOTE - Locate the Ceramic Insulator on the Bottom {Out}
Wire; and NOT the Top {Back} Wire of the Clothesline.
This makes the Metal (Wire) Clothesline into a
Folded {Bent} Random Wire Antenna Element.
4. Rig the Pulleys and Insulators
5. Rig the Clothesline with about a 2"-3" Drop in every
20 Feet when unloaded. (no clothes hanging on it)
6. Connect an Alligator Clip to the End of an Insulated Wire
that is used as the feed-in-line from the Clothesline Antenna
to the Radio when the Antenna is in use.
7. Connect the other-end of the Insulated Wire
feed-in-line to the HI-Z (500 Ohms) Antenna Input
of the Radio.
8. Attach the Alligator Clip to the Metal Clothesline
Fastener and ensure that they have good Metal-to-Metal
contact with the Inner Wire of the Clothesline.
{Electrical Continuity}
NOTE - Please Disconnect the Alligator Clip feed-in-line
when the Clothesline is being used to Hang Clothes :o)

SECOND - THE IMPROVED CLOTHESLINE [HIDDEN] ANTENNA :
An improved version of this Clothesline [Hidden]
{Folded or Bent} Random Wire Antenna starts with
a Ground Rod . . .
1. Install Ground Rod at the Base of the End of the
Clothesline that is being used as the Feed-Point for
the Antenna.
2. Run a Vertical Ground Wire from the Ground Rod
directly up to a location near the Clothesline Pulley.
3. Mount a 9:1 Matching Transformer at this location.
* One End of the Antenna (9) Side of the Matching
Transformer is attached to the Ground Wire.
* One End of the Antenna (9) Side of the Matching
Transformer is attached to a short wire with an Alligator
Clip on it to attach to the Metal Clothesline Fastener
when the Antenna is in-use and to the Ground Wire
when the Clothesline is being used to Hang Clothes.
* The Two Ends of the Coax Cable (1) Side of the
Matching Transformer are attached to a SO-239
Connector - One to the Center-Pin and the other to
the Outer Threaded Fitting.
4. Connect a Coax Cable between the Matching Transformer
and the Radio / Receiver.

THIRD - THE ALTERNATIVE CLOTHESLINE [HIDDEN] ANTENNA :
Use Ladder-Line or 300 Ohm TV type Twin Lead as the
twin-feed-in-lines for the Wire Clothesline Antenna Element.
1. Attach an Alligator Clip (2) to each of the Wires on the
Antenna End of the feed-in-line.
2. Attach the Alligator Clips (One each) to the Two Ends
of the Clothesline (the Metal Clothesline Fasteners) where
they are held separated by the Third Ceramic Insulator.
3. Reel the Clothesline out to it's Center-Span-Mid-Point
to us it as a Fold Dipole Antenna. -or- Reel the Clothesline
out to it's Off-Center-Span-38%-Point to use it as a Folded
"Windom" Antenna. My preference is the Off-Center
Folded Windom Antenna.
DOING-THE_MATH :
For a Off-Center Folded Windom Antenna
Pulley-to-Pulley = Pulley-to-Off-Center
- - - Length - - - - - - - 38%-Point - - -
20 Feet = 7.6 Feet {Double this for 40 Feet}
25 Feet = 9.5 Feet {Double this for 50 Feet}
30 Feet = 11.4 Feet {Double this for 60 Feet}
35 Feet = 13.3 Feet {Double this for 70 Feet}
45 Feet = 17.1 Feet {Double this for 90 Feet}

One other point . . .
Watch Out ! - Keep The Clothesline Wires High-in-the-Air :
You Don't Want To Be Clotheslined By Your Own Antenna ;-)

as always - iane ~ RHF

I'm sure that kit radio gave it's original owner many hours of
satisfaction. $20.00 is probably more than I would pay for one since
it is sold as is.

What I don't like about the auction is that it is managed by a broker.
I've never gotten a satisfactory answer from those folks, and sometimes
they don't even bother to respond at all. I was confused by this
statement: "The owner stated that this item worked well on ESPN A
Band." Does that mean an ESPN station on the AM band? Or something
else...

He's got a new book out so he's been on, (in the last week or so)
BBC World Service's "Interview", Radio Australia/Radio National's
"Late Night Live", and now on RNW's "Amsterdam Forum".

There will be podcasts of "Late Night Live" and "Amsterdam Forum",
and depending on how many back shows they keep, streaming audio
of "Interview".

Anybody know what VPRO is? This is some Dutch domestic network
that's program sharing with Amsterdam Forum. The interview with
Fukiyama was by a VPRO person, (phonetically) Kris Keiner (sp?).

In addition to the "outdoor antenna" which consists of a connection to the gutters outside the building (30 feet high), indoors I have a "tent antenna". A friend discarded some tent poles. They are anodised aluminum and fit one into the other. I attached a strong aligator clip to an unanodised section and ran a wire to the RCA plug connection on the back of the receiver. It works <S>. If you need a quick and dirty antenna, it works very well.

Fuck you. I don't need a lawyer. I posted it because some of the
smart ones around here are SWLs because of the superior content, 90%
of which has moved to alternative delivery venues.

If certain fossils wish to hang on and listen to the Neonazi Preachers
that dominate the bands these days (HF love it or leave it) in lieu
of intelligent content, so be it. I will continue to assume there are
a few people around here who have not undergone autolobotomy.

I really don't see why David's initial posting should be any more offensive than all the other (even more) off-topic postings in this newsgroup.

At least there's programming overlap, even if the mode of transmission is different.

No one seems to get the least bit riled up when Cuhulin starts up his nonsense about Lassie Come Home or when he begins his tired old routine of reliving the hopelessly dated humor of Dr. Strangelove.

But, really, the back-and-forth is not so much about on-topic v. off-topic....it's primarily about usenet ego wars between a handful of individuals in the group. If they have nothing else to do with their time, then I suppose they may as well have fun going at it... The ranting that ensues contributes just as little to the group as anything else, ultimately resulting in only another long thread about nothing being contributed to the archive.

So be it...that's just the way things work here.

Carry on, folks! ;-)

Ham Radio Operators are GOLD PLATED KOOKS!
Trust me on this one. I have two of these weirdoes
living down the block from me and they are VERY
strange people. When they are not interfering with
my Cable TV they are scrounging around the neighborhood
in their beat up old cars looking for electronics junk
or finally cutting their lawns which seem to be in a
near-forever state of un-cut 12" tall grass and weeds.
Their kids run around in rags and beat up old dollar
store sneakers cause the wifie of one of em told me
her "bastard husband she never should have married"
spends all his money on radio gear and/or getting tanked up
on booze at the local Am Legion Hall. Trust me pookie.
You don't want hams in your neighborhood. They remind me
of the kind of people who go and shoot up Post Offices
and/or their Ex-Employers...

Satellite crap...hmmm, okay...I could have predicted this response!
;-)

Satellite crap....as opposed to Cuhulin's Turner Classic Movies
crap...which could also satellite crap (Direct TV, Dish Network, etc),
unless, of course, it's cable crap. Either way, if the argument is
over on-topic v. off-topic, Cuhulin's nonsense is much more hopelessly
off-topic.

(don't get me wrong on one point here: I like Robert Osborne and the
rest of the TCM gang...of course, not every B&W movie is a "classic"!)

I forgot to add that their website does not have this information in
this format. They have one page with all their daily transmissions in
all languages they broadcast in and I grabbed just the English
broadcasts. I put information like this in an Excel sheet so I can sort
it.

I have not checked much of the schedule yet but understandably 0600 to
0800 UTC on 9700 comes in well and 1900 to 2100 UTC on 17810 is very
good some days and very weak on others.

All the other transmissions from Bonaire to any part of the USA is usually very good.

I have not checked lately but 17660 has been absent. It was very good last summer season though. RN keeps repeating that they are broadcasting on this frequency through the winter but I have not heard them on it since last fall at the seasonal switch in frequencies. They should be back on it now though but I have not heard them on it. It should be very strong at my location.

John,

Thank you. I always enjoy reading your DXpedition reports. The "dead rasta sheep phenomenon" picture made me chuckle. Frankly, I am downright jealous of the setting too. Looks like a nice place to spend a weekend or ten!

Jackie

I get it. I post a web site with dynamic schedules for 100 stations
and get hassled; he posts a basic schedule for a single station (that
is thought of by consensus around here as hopelessly slanted to the
left) and I owe him my undying gratitude?

Yeah, you have to have at least one goof ball around it seems.

I'll never understand the illogic of posting day after day a bunch of
off topic crap in a news group. If they were just lonely or something
you would think that they could at least find an intelligent piece of
information to post instead of a continuous stream of nonsense.

That's a fun radio to use IF it is in working condition. No o ther radio manufacturer has made a tuning knob with that feel that is like a

combination lock on the bank vault. Picked one up for $25.00 at an antique auction of all places. If they need work and alignment, according to one prior owner they can be devilishly difficult to get right.

I have owned the Sangean ATS 803A (rebranded as the RadioShack DX-440) since 1989 and it has played all night, every night, for at least 10 hours, for the last 17 years. I also take it virtually everywhere I go: in my small boat, on car trips, on the porch every weekend, on planes, in both carry-on and checked luggage, duffel bags, car trunks, etc., and have never had a single problem with it in all this time. I often use simple wire antennas for portable use, and it sets within a home-built triangular MW tunable loop antenna, and both of these atop a 69¢ turntable from the grocery store at my bedside table. The antenna input transistors have never fried even with the hundreds of T-storms and other static events it has withstood. It has also been used as a FM tuner on an amplifier and had a good-sized Yagi array for FM, all to no bad effect. I have several other radios to compare it to: Lowe HF-225, Yaesu FRG-8800 and FRG-100, and also owned a Kenwood R-5000 for a couple years, and various other decent VHF and UHF receivers and FM equipment, so this is an informed opinion. I am not saying the DX-440 is as fine a reciever in all ways, but it compares favorably in the portable category for which it was intended, and using only a reasonable measure of care, its record of reliability and durability speaks for itself. I would not hesitate for one single second to buy another Sangean product.

There is a new demo at http://www.voxmaris.com.ar , in the downloads section. You can run the program called "configurador.exe" and there you can choose the language and the network interface to run the simulator. (At the first time, both application Instructor and Student ask for this configuration).

Remember that Instructor and Student must run in separated machines within the local network. Also remember to setup properly any firewall application in any host where the simulator will run.

If you have any comments, doubts or question about the simulator or about getting the full version please write us at voxmaris.gmdss@gmail.com

Regards
Vox Maris GMDSS Simulator

The Superradio III is a pile. Touchy to tune, drifty, hardly will stay on any station but the mile-wide ones at the low end of the AM dial. But it certainly is sensitive and good-sounding when tuned spot-on to a decent station.. Cabinet quality s pretty bad, tuning mechanism is sloppy and stretchy. This is all reflected in its price, $40 new is the low end. CCRadio is ery good. I have owned one since around 1999. Everything the SR III ain't. They did a lot of things right, most appreciated by me is the slewing buttns which jump in 10khz steps, not 9, as many others did back then. Makes it very easy to scan the AM band in the dark or without using the tuning knob. Also, tuning by the knob is in 1khz resolution, which is just fine for AM broadcasts, off-tuning for tone quality or adjacent-channel avoidance. Sensitivity is at least good. Only real complaint is that the case is a bit awkward-shaped, but if you aren't going to walk around with it in your hand all the time, it isn't a big deal. I am not at all disappointed I bought it. It gets used primarily daytime for around 3 hrs/day and mostly sets atop our fridge where I can rotate it for the various stations we listen to regularly during that time. It has a pleasant tone for voice and FM music is very decent, too, eerily room-filling without needing to be loud.

I agre, Mike, my DX-440 is that old, too and runs at least 10 hours a day, every day. See my previous posts:.....Bob wrote:"I have owned the Sangean ATS 803A (rebranded as the RadioShack DX-440) since 1989 and it has played all night, every night, for at least 10 hours, for the last 17 years. I have to wonder about the "poorly made" comments. It just may be that the feel of an unweighted tuning knob is deceptive, or the absence of a rubber tire on it, or what then? I will admit the tuing knobon the 803-A is a bit light and feathery-easy to turn, but it still works just fine, does what it needs to do, and has done so for 17 years. The cabinets on both my Sangeans are very reasonably crafted and tight-looking, the formed speaker grilles fit in their place perfectly and don't shake or buzz, the knobs are molded nicely and lay in their recesses very nicely, too. The battery compartments are sturdy, not warped, and stay latched You want to see and feel some real junk? Go look at a GE Superradio III. For outdoor and severe duty usage, I have bought portable AM/FMers from Radio Shack that tune better, feel better and get better reception, sensitiviy and selectivity for a third the price of the SR III and are half the size. If you expect $1500 worth of radio from something that cost a tenth that much, I think you are kidding yourself.

I was always taught to use a good tight wrap of friction tape, and
cover it with a good tight, clean (no fingerprints) wrap of regular
electrical tape. I've seem some of those last a good long time.
Haven't played much with the self-sealing plastic-ish tape they
sell for weathersealing.

1842. Why Tilt ? - The Terminated Tilted Folded Dipole (TTFD / T2FD) Antenna

Newsgroup: rec.radio.shortwave
Date: 2006-04-18 09:00:51 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1145350851.669830.24500@z34g2000cwc.googlegroups.com>
Source record: 71049

Raúl,

Why Tilt ? - The Terminated Tilted Folded Dipole (TTFD / T2FD) Antenna
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/9085

Terminated Tilted Folded Dipole (TTFD / T2FD) Antenna
http://en.wikipedia.org/wiki/T2FD
http://www.electronics-tutorials.com/antennas/antenna-basics.htm
http://www.hard-core-dx.com/nordicdx/antenna/wire/t2fd.html
http://www.hard-core-dx.com/nordicdx/antenna/wire/t2design.html
http://www.hard-core-dx.com/nordicdx/antenna/wire/t2fdfeed.html
http://www.hard-core-dx.com/nordicdx/antenna/wire/t2fdcomp.html
http://www.hard-core-dx.com/nordicdx/antenna/wire/t2fd_1.html
http://www.radiohc.org/Distributions/Dxers/ttfd2.html

An Antenna that incorporates these Four Design Elements
to achieve Broad Banded performance :
1. Terminated
2. Tilted
3. Folded
4. Dipole Antenna
http://www.cebik.com/wire/t2fd.html

Starting with #4 the Basic DIPOLE ANTENNA.
http://www.radio-electronics.com/info/antennas/dipole/dipole.php
http://www.ycars.org/EFRA/Module%20C/AntDip.htm
The Dipole is generally a Half-Wave Antenna 'cut' for
one Specific Frequency; Mounted at a Set Height for
that Frequency and Positioned for a general Off-the-Sides Broadcasting
and Receiving. Usually the Dipole is mounted
Flat some times in an Inverted "V" or Sloping and even
Vertical.
http://en.wikipedia.org/wiki/Dipole_antenna
How High should my Dipole be ?
http://www.qsl.net/aa3rl/ant2.html
FWIW - The Radiation Resistance of a properly installed
Half-Wave Dipole Antenna is 75 Ohms.

The FOLDED Dipole #3 is simply a Dipole that is Folded
Back Over on Itself making it Double. If one Dipole is
a Half-Wave Antenna then it follows that a Double Dipole
is a Half-Wave Antenna Times-Two = a Full-Wave Antenna.
The Folded {Full-Wave} Dipole generally has better Band
Width then the Half-Wave Dipole Antenna. Most often the
Fold Dipole is mounted Flat and sometimes Vertical. The
directional characteristics of the Folded Dipole Antenna

again are Off-the-Sides for Broadcasting and Receiving.
FWIW - The Radiation Resistance of a properly installed
Folded {Full-Wave} Dipole Antenna is 300 Ohms.
http://www.radio-electronics.com/info/antennas/dipole/folded_dipole.php
http://www.qsl.net/w4sat/fdipole.htm
http://www.arcticpeak.com/antennapages/folded_dipole.htm
TV type Folded Dipole Antenna
http://www.wfu.edu/~matthews/misc/dipole.html

TILTED #2 is used to get the T2FD Antenna off the Horizontal
where much of the signal is Off-the-Sides and give the
Wire Antenna Elements a little Vertical Dimension to make
the Antenna Radiate all around equally in all directions.
Tilting also varies the Height-above-Ground of the Antenna
and thus the relationship of the Wire Antenna Elements to
the Ground has no one specific frequency as in the Basic
Dipole Antenna. {Ground Reactance ?)

RAUL - SO TO ANSWER YOUR QUESTION
Titlting helps to make the T2FD Antenna Omni-Directional.

TERMINATED #1 is used to match the impedance characteristics
of the Folded Dipole Antenna over a much broader Frequency
range then the un-terminated Folded Dipole.

TWO SHORTWAVE LISTENER (SWL) T2FD ANTENNAS :
NOTE - For the Shortwave Listener this T2FD or TTFD
Terminated Tilted Folded Dipole (T2FD) Antenna design
seems to be preferred. It uses a 4:1 Matching Transformer
(Balun) and a 75 Ohm Coax Cable feed-in-line with a
390 Ohm Terminating Resistor.
http://www.hard-core-dx.com/nordicdx/antenna/wire/t2design.html
Or this Terminated Tilted Folded Dipole Shortwave Listener's
(SWL) Antenna that uses a 10:1 Balun with a 50 Ohm Coax Cable
feed-in-line with a 470 Ohm Terminating Resistor.
T2FD => http://www.johncon.com/john/T2fd/

GROUNDING of the Terminated Tilted Folded Dipole (T2FD)
Antenna is not required since it is a form of a Dipole
Antenna an in an of itself does not require a Ground to
make it a fully functioning Antenna. However your Radio
Shack should have a good earthen Ground Connection and
through your Radio Shacks equipment the T2FD will have
a Ground Path of sorts. To that end ensure that you have
a good earthen Ground Connection for your Radio Shack that
is Bonded to your House's Electrical System.

hope this helps - iane ~ RHF

Hello

As far as I know , you have to tilt the antenna to get the right reveiving curve/ angle. for distant stations it is good to receive low incoming signals . By tilting this is achieved.

I use a 17 meter long T2FD for over 10 years and it is a antenna which not gives a high signal level but a clean signal!

I see this as an advantage

Greetings Han, the netherlands

You can also visit my website

http://home.wanadoo.nl/hanhardonk/indexengels.html it contains a lot of recordings of radiostations below 30 MHz

WellBrook T2FD Antenna
http://www.wellbrook.uk.com/UMBT2FD.html

The T2FD Antenna when laid Flat {Horizontal} Radiates
Off-the-Sides more then the Ends and thus is Bi-Directional
(two-way) vice Omni-Directional (All-A-Round).

The "Tilt" is usually about 20-30 Degress.
With Longer T2FD Antennas have less Tilt and
Shorter T2FD Antennas having more Tilt.
http://www.johncon.com/john/T2fd/
http://www.universal-radio.com/catalog/sw_ant/0562.html

Tilt ? - See Figure # 9
http://www.cebik.com/wire/t2fd.html

> Arnie Coro said don't set them like Inverted "V".

http://www.radiohc.org/Distributions/Dxers/ttfd2.html

> How much affects if T2FD is placed in a horizontal way?

Less Omni-Directional and more Off-the-Sides.

> And also important, how they got to be properly grounded
> to avoid sorrounding noise, as I have change the use of
> 300 Ohm T.V. line for 75 Ohm coaxial in a 4:1 disposition,
> but noise doesn't ended at all.

Noise is relative and for your location you would have
to start with :
1. A 1/4 WL Vertical Antenna as your High Noise
Reference Antenna
2. Then use a simple Horizontal 1/2 WL Dipole as your
Moderate Noise Reference Antenna.

3. A smaller multi-turn Vertical Loop Antenna for your
Low Noise Reference Antenna.

There are many things (factors) that can contribute to
the amount of Noise that you Hear on your Antennas.
* Location of the Antenna
* Placement of the Antenna
* Localized Noise Sources
* Type of feed-in-line
* Placement routing of the feed-in-line
* Antenna Grounding
* Radio Shack Grounding

TIP - If your Radio can be run by Battery. Take the
Radio Out-Side and connect it to your Antenna. Check
the Reception and the Noise Levels. If the Reception
is very good and the Noise levels are low : Then the
Noise Sources are most likely related to the In-Side
of your Home : AC Power Equipment-Appliances-Lights;
the AC Power Source Mains; and poor Shack Grounding.

Terminated Tilted Folded Dipole (T2FD / TTFD)
Antenna Size and Frequency :
http://en.wikipedia.org/wiki/T2FD_Antenna
http://www.dxzone.com/cgi-bin/dir/jump2.cgi?ID=817

Bigger T2FD Antenna designed for the lower Shortwave
Frequencies 3-18 MHz would be roughly 33m (110 Feet)
Long, with a Space of 1m (3.3 Feet) between the Wires.

Average T2FD Antenna designed for the most Shortwave
Band Frequencies 5-30 MHz would be roughly 20m (66 Feet)
Long, with a Space of 60cm (2 Feet) between the Wires.

Smaller T2FD Antenna designed for the middle 31 Metters
Shortwave Frequencies (9.75 MHz)would be roughly 10m
(34 Feet) Long, with a Space of 30cm (1 Feet) between
the Wires.

Source record: 71052

HAN,

To repeat myself :
TILTED #2 is used to get the T2FD Antenna off the Horizontal
where much of the signal is Off-the-Sides and give the
Wire Antenna Elements a little Vertical Dimension to make
the Antenna Radiate all around equally in all directions.
Tilting also varies the Height-above-Ground of the Antenna
and thus the relationship of the Wire Antenna Elements to
the Ground has no one specific frequency as in the Basic
Dipole Antenna. {Ground Reactance ?)

Meaning :
The Variable Height above Ground favors no one specific
Frequency; and as the Receive of Transmit Frequency
varies the "Tilt" aids in accommodating all Frequencies
within the Band Width of the T2FD Antenna design.

hope this helps - iane ~ RHF

100 stations? Sorry, that's not 100 'stations' but rather 100 'programs'.

And... it's 100 programs of satellite crap, not shortwave.

Go shill for satellite elsewhere, 'tard.

Tilting the antenna (assuming the average height remains the same) does not
alter the takeoff angle (or elevation of the main lobe).
Download the demo version of EZNEC and you can see this for yourself.
The elevation angle is purely a function of height above ground of the
current loop(s).

I really think it is extremely sick that such young women, with their whole lives ahead of them, would marry such a couple of ugly, sick, fucked-up old men. Art has alienated all of his friends and a majority of his fan base by taking this inadvisable action. And why would he want to move to the Philippines? Doesn't the dumb fuck know that, with all his fame and money, he'll be a sitting duck for muslim terrorists? How much has he budgeted for a security detail? Or does he intend to stay in his apartment all the time, like he did in his house in Pahrump? Is he still going to sleep all day and let his bride do all the work, then get up in the evening and stay up all night jacking off, like he did when he was married to his "true love" Ramona, whom he forgot about 2 weeks after she died? Talk about screwing up your life! You can't believe how many of his friends feel completely betrayed that he would do something like this, after all the bullshit he gave them. It's really making a lot of his friends suspect that perhaps he had something to do with Ramona's death, and that he's skipping the country before the homicide investigators begin asking embarassing questions. Or perhaps that he has trouble with the U.S. government (false tax returns, perhaps?) and wants to escape to a more friendly country where he can buy government influence and avoid extradition. But the real question is, how screwed up is the American public, that they would actually IDOLIZE a fuckup like Art?

I do own an old Heathkit Signal Tracer.I dont see a model number on it.I guess it dates back to the early 1960's,maybe the 1950's.It is portable and has a metal carrying handle on top of it and what looks sort of like a tuneing eye in the lower left front corner on the front.I think it is a tube type signal tracer,oviously.I also own a small Micronta Transitorized (it says transistorized on the front panel) Signal Tracer.

I also own a few other old testors for testing things related to radios and tv sets,such as signal generators and tube testors.Stuff I bought many years ago at thrift stores and fleamarkets and junk shops.I dont know how to use those devices though.What it is,I like to collect all kinds of old,old thingys.Whether I ever use that old stuff or not,it doesn't matter to me.It's my junk and I like it.

MG Vernon Chong, USAFR, forwarded:

This WAR is for REAL!

To get out of a difficulty, one usually must go through it. Our country is now facing the most serious threat to its existence, as we know it, that we have faced in your lifetime and mine (which includes WWII).

The deadly seriousness is greatly compounded by the fact that there are very few of us who think we can possibly lose this war and even fewer who realize what losing really means.

First, let's examine a few basics:

1. When did the threat to us start? Many will say September 11, 2001. The answer as far as the United States is concerned is 1979, 22 years prior to September 2001, with the following attacks on us:

* Iran Embassy Hostages, 1979;
* Beirut, Lebanon Embassy 1983;
* Beirut, Lebanon Marine Barracks 1983;
* Lockerbie, Scotland Pan-Am flight to New York 1988;
* First New York World Trade Center attack 1993;
* Dhahran, Saudi Arabia Khobar Towers Military complex 1996;
* Nairobi, Kenya US Embassy 1998;
* Dares Salaam, Tanzania US Embassy 1998;
* Aden, Yemen USS Cole 2000;
* New York World Trade Center 2001;
* Pentagon 2001.

(Note that during the period from 1981 to 2001 there were 7,581 terrorist attacks worldwide).

2 Why were we attacked? Envy of our position, our success, and our freedoms. The attacks happened during the administrations of Presidents Carter, Reagan, Bush 1, Clinton and Bush
2. We cannot fault either the Republicans or Democrats as there were no provocations by any of the presidents or their immediate predecessors, Presidents Ford or Carter.

3. Who were the attackers? In each case, the attacks on the US were carried out by Muslims.

4 What is the Muslim population of the World? 25%.

5. Isn't the Muslim Religion peaceful? Hopefully, but that is really not material. There is no doubt that the predominately Christian population of Germany was peaceful, but under the dictatorial leadership of Hitler (who was also "Christian"), that made no difference. You either went along with the administration or you were eliminated. There were 5 to 6 million Christians killed by the Nazis for political reasons (including 7,000 Polish priests). (see http://www.nazis.testimony.co.uk/7-a.htm

Thus, almost the same number of Christians were killed by the Nazis, as the six million holocaust Jews who were killed by them, and we seldom heard of anything other than the Jewish atrocities. Although Hitler kept the world focused on the Jews, he had no hesitancy about killing anyone who got in his way of exterminating the Jews or of taking over the world - German, Christian or any others.

Same with the Muslim terrorists. They focus the world on the US, but kill all in the way -- their own people or the Spanish, French or anyone else. The point here is that just like the peaceful Germans were of no protection to anyone from the Nazis, no matter how many peaceful Muslims there may be, they are no protection for us from the terrorist Muslim leaders and what they are fanatically bent on doing -- by their own pronouncements -- killing all of us "infidels." I don't blame the peaceful Muslims. What would you do if the choice was shut up or die?

6. So who are we at war with? There is no way we can honestly respond that it is anyone other than the Muslim terrorists. Trying to be politically correct and avoid verbalizing this conclusion can well be fatal. There is no way to win if you don't clearly recognize and articulate who you are fighting.

So with that background, now to the two major questions:

1. Can we lose this war?
2. What does losing really mean?

If we are to win, we must clearly answer these two pivotal questions.

We can definitely lose this war, and as anomalous as it may sound, the major reason we can lose is that so many of us simply do not fathom the answer to the second question - What does losing mean?

It would appear that a great many of us think that losing the war means hanging our heads, bringing the troops home and going on about our business, like post Vietnam. This is as far from the truth as one can get What losing really means is:

We would no longer be the premier country in the world. The attacks will not subside, but rather will steadily increase. Remember, they want us dead, not just quiet. If they had just wanted us quiet, they would not have produced an increasing series of attacks against us, over the past 18 years. The plan was clearly, for terrorist to attack us, until we were neutered and submissive to them. We would of course

have no future support from other nations, for fear of reprisals and for the reason that they would see, we are impotent and cannot help them.

They will pick off the other non-Muslim nations, one at a time. It will be increasingly easier for them. They already hold Spain hostage. It doesn't matter whether it was right or wrong for Spain to withdraw its troops from Iraq. Spain did it because the Muslim terrorists bombed their train and told them to withdraw the troops. Anything else they want Spain to do will be done. Spain is finished.

The next will probably be France. Our one hope on France is that they might see the light and realize that if we don't win, they are finished too, in that they can't resist the Muslim terrorists without us. However, it may already be too late for France. France is already 20% Muslim and fading fast!

If we lose the war, our production, income, exports and way of life will all vanish as we know it. After losing, who would trade or deal with us, if they were threatened by the Muslims.

If we can't stop the Muslims, how could anyone else?

The Muslims fully know what is riding on this war, and therefore are completely committed to winning, at any cost. We better know it too and be likewise committed to winning at any cost.

Why do I go on at such lengths about the results of losing? Simple. Until we recognize the costs of losing, we cannot unite and really put 100% of our thoughts and efforts into winning. And it is going to take that 100% effort to win.

So, how can we lose the war?

Again, the answer is simple. We can lose the war by "imploding." That is, defeating ourselves by refusing to recognize the enemy and their purpose, and really digging in and lending full support to the war effort. If we are united, there is no way that we can lose. If we continue to be divided, there is no way that we can win!

Let me give you a few examples of how we simply don't comprehend the life and death seriousness of this situation.

President Bush selects Norman Mineta as Secretary of Transportation. Although all of the terrorist attacks were committed by Muslim men between 17 and
40 years of age, Secretary Mineta refuses to allow profiling. Does that sound like we are taking this thing seriously? This is war! For the duration, we are going to have to give up some of the civil rights we have become accustomed to. We had better be prepared to lose some of our civil rights temporarily or we will most certainly lose all of them permanently.

And don't worry that it is a slippery slope. We gave up plenty of civil rights during WWII, and immediately restored them after the victory and in fact added many more since then.

Do I blame President Bush or President Clinton before him?

No, I blame us for blithely assuming we can maintain all of our Political Correctness, and all of our civil rights during this conflict and have a clean, lawful, honorable war. None of those words apply to war. Get them out of your head.

Some have gone so far in their criticism of the war and/or the Administration that it almost seems they would literally like to see us lose. I hasten to add that this isn't because they are disloyal. It is because they just don't recognize what losing means. Nevertheless, that conduct gives the impression to the enemy that we are divided and weakening. It concerns our friends, and it does great damage to our cause.

Of more recent vintage, the uproar fueled by the politicians and media regarding the treatment of some prisoners of war, perhaps exemplifies best what I am saying. We have recently had an issue, involving the treatment of a few Muslim prisoners of war, by a small group of our military police. These are the type prisoners who just a few months ago were throwing their own people off buildings, cutting off their hands, cutting out their tongues and otherwise murdering their own people just for disagreeing with Saddam Hussein.

And just a few years ago these same type prisoners chemically killed 400,000 of their own people for the same reason. They are also the same type enemy fighters, who recently were burning Americans, and dragging their charred corpses through the streets of Iraq.

And still more recently, the same type enemy that was and is providing videos to all news sources internationally, of the beheading of American prisoners they held.

Compare this with some of our press and politicians, who for several days have thought and talked about nothing else but the "humiliating" of some Muslim prisoners -- not burning them, not dragging their charred corpses through the streets, not beheading them, but "humiliating" them.

Can this be for real?

The politicians and pundits have even talked of impeachment of the Secretary of Defense. If this doesn't show the complete lack of comprehension and understanding of the seriousness of the enemy we are fighting, the life and death struggle we are in and the disastrous results of losing this war, nothing can.

To bring our country to a virtual political standstill over this prisoner issue makes us look like Nero playing his fiddle as Rome burned -- totally oblivious to what is going on in the real world.

Neither we, nor any other country, can survive this internal strife. Again I say, this does not mean that some of our politicians or media people are disloyal. It simply means that they are absolutely oblivious to the magnitude, of the situation we are in and into which the Muslim terrorists have been pushing us, for many years

Remember, the Muslim terrorists stated goal is to kill all infidels! That translates into ALL non-Muslims -- not just in the United States, but throughout the world.

We are the last bastion of defense.

We have been criticized for many years as being 'arrogant..' That charge is valid in at least one respect. We are arrogant in that we believe that we are so good, powerful and smart, that we can win the hearts and minds of all those who attack us, and that with both hands tied behind our back, we can defeat anything bad in the world!

We can't!

If we don't recognize this, our nation as we know it will not survive, and no other free country in the world will survive if we are defeated.

And finally, name any Muslim countries throughout the world that allow freedom of speech, freedom of thought, freedom of religion, freedom of the press, equal rights for anyone -- let alone everyone, equal status or any status for women, or that have been productive in one single way that contributes to the good of the world.

This has been a long way of saying that we must be united on this war or we will be equated in the history books to the self-inflicted fall of the Roman Empire. If, that is, the Muslim leaders will allow history books to be written or read.

If we don't win this war right now, keep a close eye on how the Muslims take over France in the next 5 years or less. They will continue to increase the Muslim population of France and continue to encroach little by little, on the established French traditions. The French will be fighting among themselves, over what should or should not be done, which will continue to weaken them and keep them from any united resolve. Doesn't that sound eerily familiar?

Democracies don't have their freedoms taken away from them by some external military force. Instead, they give their freedoms away, politically correct piece by politically correct piece.

And they are giving those freedoms away to those who have shown, worldwide, that they abhor freedom and will not apply it to you or even to themselves, once they are in power.

They have universally shown that when they have taken over, they then start brutally killing each other over who will be the few who control the masses. Will we ever stop hearing from the politically correct,

about the "peaceful Muslims"?

I close on a hopeful note, by repeating what I said above. If we are united, there is no way that we can lose. I hope now after the election, the factions in our country will begin to focus on the critical situation we are in, and will unite to save our country. It is your future we are talking about! Do whatever you can to preserve it.

After reading the above, we all must do this not only for ourselves, but our children, our grandchildren, our country and the world.

Whether Democrat or Republican, conservative or liberal and that includes the Politicians and media of our country and the free world!

There is only ONE grocery store tabloid which is fit to be mentioned in the
same sentence as Art Bell.

And that tabloid is anything but boring.

Sure, you can wrap it snugly for a few layers, but if you pull it to snap it off, it crinkles up and pulls away from the layer below it. Cut the tape and seal it down firmly for the last finish.

1864. Suggestions for the DE1108

Newsgroup: rec.radio.shortwave

I've reviewed tons of suggestions and most are great - but I have a suggestion/request that I have not seen yet. Please include the ability to keep the dial light on with batteries for more than 15 sec. Hey, it's my batteries and if I want to run them down, give me that option. It always seems that just about the time I reach to change the dial (on most radio's I used) that the dial light goes out and I can't seen the button I wanted to push. If nothing else, at least give us the ability to keep the dial light on for about a minute before it goes out.

Everything else about the up coming DE1108 I love. Can't wait to get one.

Ran

With so much time in jail, it seems you would be the authority on
"penile obsession" more so than anyone else.

I'd think with a criminal record such as yours, that you'd be busy
finding a job, instead of getting a welfare check and doing something
productive. But no, instead you huff and puff and waste time on
USENET.

That criminal record is going to follow you everywhere you go now. I
PROMISE! GUARANTEED. Know where you are and will make sure it makes
it way into employer's hands. Should have quit before you dug yourself
in any deeper.

Now go ahead, come on back with some pitiful smart ass remark. Love
it!

Nice thing is, YOU FUCKED YOURSELF!
Bye Bye asshole!

Radiointel.com has a January 2006 summary that was apparently
translated from a chinese website. If the specs are right it is about
14 inches wide and when packed with 6 D cells it ain't no pocket
portable. I would encourage you to enjoy the 1103 and just hold off
'till someone buys a 1108 and does a complete review.

1875. Coax Question

Newsgroup: rec.radio.shortwave
Date: 2006-04-18 19:45:32 UTC
From: Robert11 <rgsros@notme.com>
Message-ID: <nOydnWoyjJtE3NjZRVn-ig@comcast.com>
Source record: 71082

Hello:

Have started running cvoax from a receve-only antenna to the house.
The coax has a Polyethylene (PE) Outer jacket.
With this PE jacket, it's upposed to be buriable.

It's becoming a real job for me at my age to dig a slit trench, even a
shallow one.
But, I can easily just lay the coax on the surface, without any reql danger
of anyone
stepping on it, etc. It's in a pretty out of the way area.

I realize that burying it is undoubtedly best, but in a practical
sense, how well does a PE outer jacket stand up if just laying on the ground
?
Would be subjected, of course, to rain, and also buried in snow during the
winter.

Again, it's receive only.

Thanks,
Bob

1876. Re: Coax Question

Source record: 71083

Dear Bob,

No matter how "out of the way" the wire is, someone or something will step on it or damage it in some other way if it is left on the surface. In a worst-case scenario some physical contact to the coax could even damage your radio and/or antenna.

Do bury the wire in a trench. Surely you or a friend must know some young fellow who would be willing to dig one for you for a few dollars. The trench need not be deep or "fancy."

Believe me, it will be worth the small effort involved.

Best,

Joe

I lived in some Mil-Spec Army Barracks buildings before.Old World War Two era two story Barracks buildings.Except for two Vietnam era Mil-Spec one storey Barracks buildings (they had concrete floors though) in Vietnam and one 1960's era Mil-Spec four storey brick Barracks building (the only one I ever lived in that had airconditioning,believe it or not) at Fort Hood,Texas in 1965.Even the two storey Barracks buildings we lived in at Scott Air Force Base,Illinois in 1963 were World War Two era two storey Mil-Spec Barracks buildings.

I miss living in those old World War Two era Barracks buildings and buffing the floors with those buffing machines and good grub in the mess halls.I have an old U.S.Army recipe book here that dates back to around World War Two.All of the ingredients measurements in the book are for cooking for 100 persons.

Just keep the skateboarders off it and you'll be fine. You'll still
need a well earthed grounding block where it enters the building.

1883. Horizontal, Vertical and Sloping Dipole Antennas [Was : Why Tilt ? - The Terminated Tilted Folded Dipole (TTFD / T2FD) Antenna]

Newsgroup: rec.radio.shortwave
Date: 2006-04-18 21:21:02 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1145395262.344896.151620@g10g2000cwb.googlegroups.com>
Source record: 71090

Dale [W4OP],

Horizontal, Vertical and Sloping Dipole Antennas
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/9090

HORIZONTAL DIPOLE ANTENNA :
A basic Horizontal 1/2 WL Dipole Antenna that is Flat
with the Center mounted at 1/4 WL above-the-ground
and existing in a plane parallel to the ground; can be
said to Radiate mostly Off-the-Sides and not the ends.
This Horizontal Dipole Antenna has a predictable
Take-Off-Angle.

- - - The Surface of the Ground acts as a Reflector causing
the majority of the Signal to go Up and Off-the-Sides of
the Wire Antenna Element in a Horizontal plane : Making
the Horizontal Dipole Antenna mostly a Upwardly Radiating
Bi-Directional Antenna.

VERTICAL DIPOLE ANTENNA :
Conversely a basic Vertical 1/2 WL Dipole Antenna that
is Straight-Up-and-Down with the Center mounted at 1/4
WL above-the-ground and existing in a plane perpendicular
to the ground; can be said to Radiate Equally-All-Around;
but not off the ends. Again this Vertical Dipole Antenna
has a predictable Take-Off-Angle.

- - - Again the Surface of the Ground acts as a Reflector
and the majority of the Signal to go Up and Equally Around
(Still Off-the-Sides) the Wire Antenna Element in a
Horizontal plane : Making the Vertical Dipole Antenna an
Upwardly and Outwardly Radiating Omni-Directional Antenna.

30 DEGREE SLOPING {SLANTED} DIPOLE ANTENNA :
So we come to a 30 Degree Sloping Dipole Antenna that
is Slanted at an Angle Off-the-Horizontal {Vertical?} with
the Center mounted at 1/4 WL above-the-ground. Here the
majority of the Signal can be said to Radiate Off-the-Sides
but a portion of the Signal will Radiate Equally-All-Around;
but still not off the ends. As you point-out the Take-Off-Angle
would be closer to the Horizontal [Flat] Dipole Antenna.

NOTE - The lower Tip of this Slanted Dipole Antenna is
3/16 WL above the ground and the upper Tip is 5/16 WL
above-the-ground and the Vertical Dimension of the 30

Degree Sloping Dipole Antenna is 1/8 WL which makes
it effectively a 1/8 WL Vertical Radiator.

- - - Again the Surface of the Ground acts as a Reflector
and the majority of the Signal will go Up and Off-the-Sides
of the Wire Antenna Element in a Horizontal plane; however
some of the Signal does radiate in-all-directions in the
Horizontal plane : Making the 30 Degree Sloping {Slanted}
Dipole Antenna less of a bi-directional Antenna and more
of an omni-directional {semi-omni} Antenna.

Well that is the way that I 'envision' the Radiation properties
of the 30 Degree Sloping Dipole Antenna in my-minds-eye 8;-}

T2FD / TTFD ANTENNA :
Back to Why "Tilt" the Terminated Tilted Folded Dipole (TTFD /
T2FD) Antennas - - - The above rational is my simple understanding
of One-of-the-Whys for the 'tilting' of the Terminated Tilted Folded
Dipole (TTFD / T2FD) Antennas. To help slightly improve the
Omni-Directional characteristics of the basic Dipole Antenna in
this more Broad Banded design and application.

Oops ! - IIRC - FWIW - I am frequently right . . .
except when I am wrong, Wrong. WRONG !
{ Please Educate and Enlighten Me - Should I Be :-}

very little science coupled with mostly common sense - iane ~ RHF

1885. Question - Degen DE1108 - Will It Be A Super Radio ? - Or just another 'portable' radio that missed the mark ?

Newsgroup: rec.radio.shortwave
Date: 2006-04-18 21:48:31 UTC
From: RHF <rhf-newsgroups@pacbell.net>

Source record: 71092

John S. - "it ain't no pocket portable."

Good a real full size 'portable' which human size Controls
large enough for my big old Fingers to opperate and my
tired old Eyes to see.

Plus a Set of Six (6) "D" Cells so that this Radio will run
on a set for weeks of normal every day listening.

Note -This is one of my personal requirements for a Super Radio.

Add in a Large Quality Speakers so that the Radio actually
'Sounds Good' and not cheap and tinny.

Note -This is another of my personal requirements for a Super Radio.

Good Tune-ability Selectivity and Sensitivity in AM/MW, FM
and Shortwave.

Note - Again this is another of my personal requirements for a Super
Radio.

SO THE QUESTION IS ? ? ?
The 'new' Degen DE1108 - Will It Be A Super Radio ?
Or just another 'portable' radio that missed the mark ?

I had no problems with my Ray-O-Vac rechargeables as long as I was
using them regularly. I set aside a set of four for a while, and
they went dead as doornails. Evvereadys don't seem too bad so far.

Ran,

As far as the issue of the Degen De1108's Dial Light Duration
goes have a Bright-&-Dim Dial Light Option {Key Function} :
* Bright-On {Hi-Full-Illumination} for 15 Seconds -or-
* Dim-On {Low-1/3-Illumination} for 60 Seconds
When using DC Battery Power.

Note - The Hi-or-Low Dial Lights feature is also nice
for AC Power Operation too.

SO THE QUESTION IS ? ? ?
The 'new' Degen DE1108 - Will It Be A Super Radio ?
Or just another 'portable' radio that missed the mark ?

Make some U shaped "staples" from coat hanger wire and use them to pin the
coax to the ground at whatever intervals are required to keep it laying
right on the ground. Next season. it will be invisible- netted into the
grass.

Near as I can tell from the Radiointel article it is transled from a
foreign (probably chinese) website. It may be just manufacturer specs.
I believe delivery is 4th quarter 2006 maybe? If so the radio would
seem to have potential, but I'll reserve judgement until it is no
longer vaporware and someone has really tested it.

14 inches wide and 6 D batteries is a bit too chunky for my taste.

1905. Coax Cable : Buried ? On-the-Ground ? In-the-Air ? - - - For Safety and Durability

Newsgroup: rec.radio.shortwave
Date: 2006-04-19 01:51:32 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1145411492.902955.26980@g10g2000cwb.googlegroups.com>
Source record: 71162

Robert 11,

Coax Cable : Buried ? On-the-Ground ? In-the-Air ?
- - - For Safety and Durability
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/9091

The main reason for Burying the Coax Cable is that it will
Last Longer in-the-ground 3-10 Years vice having people
step directly on it or things rolling over it for the same
number of years. The simple fact is that Coax Cable "ON"
the Surface of the Ground is subject to more wear-and-tear
then Coax Cable "Buried" Under-the-Ground.

Use a Mattock or Pick with a 3" Trench / Drain Shovel
http://www.lowes.com/lowes/lkn?action=howTo&p=LawnGarden/GardenToolBG.html
http://www.lowes.com/lowes/lkn?action=howTo&p=LawnGarden/GardenToolBG.html#7

A shallow Trench that is about 3"-4" Wide and about 4"-6" Deep
will do 10'-20' a Day for a Week will get any job done in time.

If the Coax Cable can not be Buried then consider buying
a cheap Garden Hose and placing the Coax Cable inside
the Hose to protect the Coax Cable from Wear-and-Tear.
If necessary in High Traffic Areas build or buy a few
"Step-Overs" (Roll-Overs) to cover the Coax Cable from
Foot and Ground. You can use Electrical Cord Runners
as Step-Overs for Coax Cable in Out-Door locations.

READ - Office {Home} Electrical Safety
http://www.cdc.gov/od/ohs/manual/ofcsfty.htm#V.%20Office%20Electrical%20Safety
http://engineering.tamu.edu/safety/new/templates/flex_elec.htm
http://www.nonprofitrisk.org/ws/c5/electronic.htm

READ - Home {Yard} Safety Checklist
http://www.agingwell.state.ny.us/safety/home/check1.htm
Safety - In All Areas of the Home and Yard

ALTERNATIVES :
* Run-Route the Coax Cable 'out-of-the-way' along a Fence
or Wall about one foot off the ground.
* Up in the Air at least Ten Feet (10') above the ground.

REMEMBER - "THINK SAFETY" : Let Your First Thought Be Safety [.]

I guess I wasn't paying attention when Verstaldin started up a thread about this back in Feb. At any rate, I stumbled across R. Zanzibar on 11735 today at 2019 UTC. Nice, clear signal with a fair bit of music until sign off at 2100.

Actually, a number of the African stations were booming in to my locale today (mid-Atlantic US). Admittedly, I haven't listened for them recently, so I don't know what conditions have been like as a matter of comparison. In any case, R. N. Equatorial Guinea was booming in on 5005 and R. Burkina on 5030 around 2230 UTC.

Source record: 71166

For those interested, I was getting a fairly clear signal on the English transmission of the Voice of Indonesia this afternoon (mid-Atlantic US). Around 2005 UTC I tuned in to the broadcast on 15150 kHz; ID given at 2019.

No elaborate set-up to receive... just an E1 receiver (Sony SW07 also was hearin' it) and 25 foot length of wire. Quiet location, of course, was probably helpful.

Just thought I'd thow that out to those of you who may be growing tired of "satellite crap" and "radio TV". ;-)

I would largely agree with this assessment, if we're looking beyond the lower grade cheapies (Bell + Howell sorta thing). Forget reliability...ultimately, even the best of 'em break down.

Besides, Apostle Keith would do well not to rely on anything that is of man...

"Beware the beast man, for he is the Devil's pawn. Alone among God's primates, he kills for sport or lust or greed. Yea, he will murder his brother to possess his brother's land. Let him not breed in great numbers, for he will make a desert of his home and yours. Shun him, for he is the harbinger of death."

I love those nice big chunky portables. I have one of 1970's vintage
that is analogue with half a dozen bandspread bands on it. Sensitive
and sounds very rich. Also easy on those D cells.
I too am waiting for the 1108 . Based on the nice work that
Degen has done so far this radio should be great.
Bob

You can use a ham transceiver but you are better off with a HF receiver.

Er, but I wrote Brock....

I've read "Blinded by the Right", so trust me that I am saving you the actual phrase that Brock and Drudge use. It's a good book. Brock had a revelation when he discovered that the stories about Clarence Thomas were true. He even found the video store where Thomas rented his porn. When Brock wrote a "fair and balanced" book about Hillary, the rapture-right screamed bloody murder because, well, it was fair and balance and we wing-nuts don't do fair and balanced!

Brock is often on with Al Franken. The show has a funny theme song for Brock's appearance, noting that he "took money from Scaife - a big disgrace!"

Other than being damaged by ground traffic in the yard, the main issue is exposure to sunlight which can age the coax faster than being buried. If you can't find a way to get it buried a few inches down, install the coax in some kind of protective tubing. This could be a hose or several sections of plastic PVC tubing, like the kind used for domestic plumbing. You don't have to glue the sections together. I like to install the coax in PVC tubing before I bury it. The tubing protects the coax from being damaged by objects in the ground which can cut the outer jacket, allowing water to get inside. This is particularly a problem in climates where the ground freezes in the winter. It's called frost heaving. I've had rocks come to the surface in the lawn from frost heaving. There's a lot of pressure involved with this process and coax can be damaged if it's in contact with a sharp rock or other object in frozen ground.

AFAIK, There are no HF transceivers with a sync' detector. I would
consider this to be a serious shortcoming for AM program listening.

I used to have an RF-3100. I was a fun receiver. It uses a
'semi-synthesizer' design similar to the FRG-7, DX-300/302 and XCR-30.
The latter was the first consumer receiver to use this design.

LOL. I know someone that had that model. You couldn't use a radio or TV anywhere in the house when that thing was running. The motor brushes sparked like the 4th of July. Talk about QRN!

1919. Re: Coax Question

Get a step-on lawn edger, which is a blade attached to a handle, and you step on it to make a slit in the dirt.

Step, wobble it a little to open it up, and make a nice slit, and work the coax down into it, alternating slit and pushing down.

Just stomp around to close the slit again.

Easiest after a rain.

I bury just plain ordinary coax and it works fine, by the way.

(You can find the coax again with a portable AM radio. Put radio on the ground tuned to a weakish station, and aim the radio to null out the station. Drag the radio across the area the coax is in in that orientation, and the station will pop up as you cross the coax.)

John S.,

Yes 14 Inches Wide by 8 Inches High and X.x Inches Thick
makes it a LARGE 'portable' AM / FM Shortwave Radio
and places it in the general size range of other Large Size
'portable' AM / FM Shortwave Radios.

However, it has two 4 Inch Speakers for Stereo FM Sound.
- - - Subtract-out one of the 4 Inch Speakers and you have
a Radio that is now 10 Inches Wide by 8 Inches High :o)
- - - Hey - I Shrunk The Radio ! ;-}

FWIW - Larger Size 'portable' AM / FM Shortwave Radios :
* Tecsun BCL-2000 = 10 1/2" x 6 1/2" x 3 1/2"
* Sony ICF-2010 = 11 3/8" x 6 3/4" x 2 1/4"
* Sangean ATS-818 = 11 3/8" x 7" x 2 1/2"
* Grundig Satellit 700 = 12 1/4" x 7 1/4" x 3"
* Eton E1 XM = 13 1/8" x 7 1/8" x 2 1/4"
* * * Degen De1108 = 14" x 8" x ?"
* Panasonic RF-2900 = 15" x 9 7/8" x 4 3/4"
All use "D" Size Batteries for DC Power.

Some Large AM /FM Only Radios
CCRadioPlus+ = 11" x 6 1/2" x 4"
GE Superadio III = 12 1/2" x 10 1/2" x 4 1/2"
All use "D" Size Batteries for DC Power.

The Average Size 'portable' AM / FM Shortwave Radios :
Usually between 7"-9" Wide and 4"-5" High
* Grundig Yacht Boy 400-PE / G4000A
* Sangean ATS-909
* Sony ICF-SW7600
* Mini CC Radio (AM/FM Only)
* Kaito KA1103
Most use "AA" Size Batteries for DC Power.

The Sony SW100 is the same basic design and feature set as the
SW7600GR, including the SYNC, but squeezed into a package the size of
an audio cassette case. It delivers the same radio performance as the
7600, but uses less batteries and is much less weight to carry if
travelling on foot. Being much smaller it doesn't have the same
speaker power or quality, but through headhpnes (or through a hifi
system -- it has an audio-out jack as well as phones) its quality is
superb. That having been said, the quality Sony have managed to
extract from a very small speaker in a very small box is
remarkable.

It's particularly well-designed from an ergonomic point of view, and
they've thought about the problems of operating it in the dark. The
keys vary is shape and placement so you can identify them in the dark,
and there's a small bump just under the phone jack socket to help you
locate it by feel in the dark. The LCD panel has a backlight which you
can turn on, and because it's a clamshell with the keys below the
screen, it (just) lights up the keyboard.

There is nothing cheap about this radio. It was designed as a flagship of Sony technology to dismay other manufacturers, a "beat that if you can!" challenge. I think it got killed by accountants after Akio Morita's death ("Mr Sony"). It was his last personally championed product, and after he died Sony started listening to the accountants who pointed out that Sony wasn't making money selling it.

For its feature set, and for a small light general purpose portable radio package for the backpacker, with very good SW performance, IMHO it can't be beaten. I think it may be still be available on a few shelves, although no longer in production. Ebay is a good source, and it holds its value well if it's the later model with the improved clamshell hinge and slightly improved performance.

1923. Modified 1/8" Mono Plug for a 'portable' Radio's Ground Connection

Newsgroup: rec.radio.shortwave
Date: 2006-04-19 11:09:02 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1145444942.835109.79790@g10g2000cwb.googlegroups.com>
Source record: 71180

JW,

Modified 1/8" Mono Plug for a 'portable' Radio's Ground Connection
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/9097

As you have discovered, most of the time a 'portable' AM / FM
Shortwave Radio's Earphone Jack is also coupled to the Radio's
RF internal circuitry and is also RF Signal Ground.

Using a modified 1/8" Mono Plug can allow you to connect a
Ground Wire to the Radio for improved Signal and lower Noise.

MODIFIED - 1/8" Mono Plug for a 'portable' Radio's Ground Connection :
1. Remove the Tip Section of the 1/8" Mono Plug leaving
just the Rear Barrel Section and Solder Terminal.
2. Solder a Wire (Ground Wire) to the Solder Terminal.
3. Connect the Wire to Ground or the Shack's Ground.
4. Plug the 1/8" Mono Plug into the Radio's Earphone Jack.
Your Radio is now Grounded.

TIP - This is also a good Travel Ground Connection to
have in your Travel Radio's Travelling Bag. Modified
1/8" Mono Plug on one end of a 3'-5' piece of Wire and
an Alligator Clip on the other end to clip-on to things.

WHAT ABOUT AN ANTENNA ?

* Collapse the Radio's Whip Antenna and connect an
External Wire Antenna directly to the Whip Antenna
for improved FM and Shortwave reception.
Note -Some times this also works for AM/MW reception too.

* Wrap a few turns of the Exteral Antenna Wire
around the Radio to couple the RF Signal to the
Radio's built-in AM/MW Ferrite Rod Antenna.

TIP - You may wish to consider using a "PWA"
Portable Wire Antenna (PWA) - by Tom Sevart
PWA => http://www.geocities.com/n2uhc/portablewire.html

I'll be interested in seeing what finished product emerges. As it is now, though, any details seem to be various rumors gleened from internet message boards. And who knows what validity that stuff holds. I wouldn't start holding my breath for a release date until at least we begin seeing some prototype images floating about...

In any case, I don't mind the 6 D cells....consumption rate would be a something I'd be interested in, though. I wouldn't simply assume that the radio is going to be easy on batteries because of the number and size used... The Sat 800, for instance, is a battery hog. I'd be surprised, though, if the consumption rate were as excessive as that of the Sat 800. Battery consumption rate was one of my first questions when the E1 came out. Thankfully, it's okay on this account. But with these types of radios, one shouldn't expect the sorta long battery life as you see on something like the S350.

I might be missing something here, but ....

If I plug the modufied plug into the earphone jack, the radio's speaker
would still be taken out of the circuit. Now that the earphone jack is no
longer usable, and the speaker is no longer inline, there would be no audio.
In a strange way it makes sense, no audio, much less noise.

RHF - man, you are right on...the 1/3 power dial light for 60 sec on batteries would be fantastic - and keep me from fumbling around in the dark. Of course, we would still like the option of full power dial light for 15 sec. Like you, I sure hope the Degen DE1108 is as suggested (created from consideration of user suggestions) and not just another portable radio that missed the mark.

Yes, I like those big bulky luggables too.
The audio from an older wood-cased Panasonic RF-5000 like this one is
wonderful:

HF transceivers work fine for shortwave reception, and the older ones typically may be just as cheap or cheaper than similar receiver-only's. They do lack the sync detector, if that is important to you. Also, make sure they have an AM filter of 6 khz or more for AM listening -- a 2 or 3 khz SSB filter isn't wide enough for decent AM sound fidelity.

Otherwise, for tabletop receivers, the Japan Radio Company models are pretty damned good; I have a 525 that's held up well and has a good feature set (altho' it lacks the sync detector).

If you can locate it, the book "More Radio Receiver -- Chance or Choice" by Rainer Lichte, or his earlier book, "Radio Receiver -- Chance or Choice" are excellent references about receivers sold during the last 40 years or so.

Yes.

Remember, a receiver works on the voltage difference between the antenna input and its local ground. If your treat the ground wiring as a sort of antenna, the local noise becomes common mode* and you can (sometimes) arrange the wiring so that the junk cancels out. (*The local receiver ground has the noise added to it, and if it's about the same voltage as on the antenna input, cancels out the noise). I've done this with both my FR-200 and my R-1000.

Best case was with a transformer coupled random wire (using an isolated winding to the coax). The arrangement was the ground rod, about 15 feet of wire, the matching transformer, and then the 70-80 foot random wire all in a straight line away from the noise source (my neighbor's dining room lights, I think). This worked well on one band at a time, as the level of noise and pickup from the ground side wire varied. (But an adjustable noise bridge down by the receiver is a heck of a lot more convenient).

The cutout switch is driven off the contact for tip of the plug (which
is removed). But that also provides the spring detent force to keep
the plug from falling out.

While it may not have a sync detector, the AM detector is a correct
implementation of ECSS. (No, I'm not talking about using SSB mode.)

One of my few complaints about the 525 receiver is distant AM signals
fade in and out, and I understand a sync detector will alleviate that.

Rechargable D cell (and other size rechargable batteries) batteries are lighter weight than alkaline batteries and you can recharge rechargable batteries and use them many,many times.With a 12 volt DC to 120 volt AC inverter,you can use a battery charger and recharge the batteries from a car battery.

I do, and alwasys have. Shortwave listening to me has a lot to do with the
cultures of other lands. Music is an excellent reflection of any Nation's
culture. I couldn't imagine SWL-ing if I didn't stop the tuning dial on
music from other places.

Dear Junius,

Try "Afrique Numero Un" from Gabon on 15475 and/or 17630 in the
afternoon (Eastern Time). Their broadcasts are in French but they often
play the most exotic African music. The station is a real treat.

Best,

Joe

ARRL threw principle out the window when they caved in to the demands of the Lambda Amateur Radio Club (LARC). It was a sad day for me indeed when I opened my beloved QST magazine and there on the pages were photos of queers on a Tropical DXpedition, and in living color no less. The ARRL wanted us to embrace a sick perverted lifestyle and be one big happy family. To me, it was the spark that signaled the death of a once proud organization, and it turned liberal.

Now the queers have all but taken over, they're like the military wing of the Democratic party, and always in your face. It's not even safe to take your kids to Easter egg hunts anymore. I know you're all going to disagree with me, but a man touching and sucking on another man's cock and fucking his ass just ain't right. The ARRL promoted this, now look what happened to our radio groups.

Well, your refusing to properly identify yourself with a real name, ISP account, and Radio License casts doubt on the credibility of your post.

I did not know that the Democratic Party had a 'MILITARY WING'. Who is the commanding officer? What is the source of that officer's legal commission? [PS: I am Republican]

Finally, your prejudices are showing!!!

I paid a guy $300 to find wires for the sprinkers in the front yard and
then buried a plastic 24oz cup upside down right next to them, Funny now
the dirt is covered them but I have some idea what area they are in.

Metal dectecting one time I found a year old quarter about 2' down in
the dirt in a park that was built 20+ years ago, gotta wonder how that
got there.

I think the cable will become one with the earth.....

I want every radio to have a timer so I can go to sleep listening to it.
Funny but there are not a great number of radios with that simple thing.
Also, start making antenna's out of rubber, or some type of material
that does not break so easily. How many of us have broken antenna's I
broke mine on the grundig by trying to push it back into it's hole too
damm hard, snap!

Thanks, Joe. I do occasionally tune in to Afrique Numero Un: a great station for African pop music.

Another good one is R. Mauritanie on 4845 kHz: the traditional music aired can be really nice.

To the FCC's credit, they tried to get rid of people like Wiseman and
Morgan by making them retest. Maybe the FCC should retest everybody
in Newington.

HFguy wrote:
> AFAIK, There are no HF transceivers with a sync' detector.

I wonder why it is that none of the big three (Kenwood, Icom, Yaesu) have included synchronous detection circuitry on their HF transceivers. A lot of these rigs are loaded with all kinds of goodies, right? And there's the constant competition to put out the ultimate rig... And, I mean, c'mon, it's not as though these units are used exclusively for amateur communications... The rx sections are general coverage, after all...

A few extra goodies to make some of these rigs more suited for AM broadcast receiving, and these companies could probably tap in to the SWL market (let's face it, there's not a whole lot of action where new HF tabletop receivers are concerned...it wouldn't take much for Icom/Kenwood/Yaesu to get the attention of SWLers...what with all the IF DSP and spectrum scopes and jazzy multi-colored displays!). And let's face it, having such a rig on the desk can be quite an inducement for an SWLer to subsequently go whole hog for the amateur thing...$$$.

Oh, and here's something that the original poster might find interesting (I know I did):

John Plimmer's comparison of the Drake R8B receiver and the Icom IC-756ProIII
